ANNUAL REPORT

OF THE

BOARD OF EDUCATION.

OUTLINE OF REPORT.

The Board of Education has the honor to submit herewith to the Legislature, in accordance with section 6 of chapter 39 of the Revised Laws, as amended by section 4, chapter 457 of the Acts of 1909, its eighty-second annual report.

The report is presented in three parts: —

PART I. — Report of the Board.

PART II. — Report of the Commissioner of Education.

Consolidation of Schools and Transportation of Pupils at
Public Expense.

High Schools.

State Normal Schools.

State-aided Vocational Education.

University Extension.

PART III. — Statistics.

General Education.

State-aided Vocational Education.

University Extension.

Tabulation and Analysis of the School Returns for the
School Year ending June 30, 1918.

ANNUAL REPORT BOARD OF EDUCATION.

PART I.

REPORT OF THE BOARD.

CHANGES IN STAFF.

Numerous changes in the staff of the Board have occurred during the past year as a result of the expansion of the work in vocational education, brought about by the administration of the Smith-Hughes Act, the establishment of teacher-training courses in immigrant education, and the resignation of two members of the staff to enter other fields of work. The following appointments were made by the Board:—

To the position of agent in charge of immigrant education for the Department of University Extension, the Board appointed Charles F. Towne, who began service March 18, 1918. Mr. Towne was graduated from Colby College in 1900, and received the degree of A.M. from Brown University in 1916. Following his graduation from Colby he taught in the Coburn Classical Institute, Waterville, Me., was principal of a grammar school in South Dennis, Mass., and principal of the high school in Farmington, N. H. From 1902 to 1912 he was principal of the Pickering Grammar School in Salem, Mass., and from 1912 to 1918 was the first assistant superintendent of schools in Providence, R. I. In this latter position he had charge of the evening schools of the city of Providence. Many immigrants attended these schools, and the experience gained in this field, together with the work done at Brown University in the field of social science, furnished the special preparation for his present position.

On April 15, 1918, the Board appointed Franklin E. Heald to the position of agent in charge of teacher-training for agricultural schools. Mr. Heald attended the public schools at Brattleboro, Vt., and graduated from Dartmouth College (as B.S.) in 1897. He completed his graduate work in the department of education at Dartmouth in 1908, and received the degree of A.M., having specialized on problems of rural education. In the interval, without seeking credit, he had conducted research and demonstration work in plant breeding and plant pathology. He served as secondary school principal at Whitingham, Vt., from 1898 to 1901; Walpole, N. H., from 1901 to 1903; Ludlow, Vt., from 1903 to 1906; Hanover, N. H., from 1906 to 1908; Hadley, Mass., from 1908 to 1914. At the last-named institution he developed one of the earliest permanent departments of agriculture in New England. In 1914 he went to the United States Department of Agriculture as specialist in agricultural education, and was in charge of the division of agricultural instruction at the time of his appointment to his present position.

On May 20, 1918, the Board appointed Anna P. Hanrahan to the position of assistant agent for teacher-training in household arts schools, with a special assignment to evening practical arts schools. Miss Hanrahan, after graduation from the High School of Practical Arts, Boston, studied for four summers at the Hyannis Normal School and one summer at Teachers' Collège. She has had four and one-half years of trade and home experience in cookery, and served as teacher of cookery in the evening practical arts classes in Boston for three years, and in day classes in Cambridge and Boston for one and one-half years.

Miss Anna A. Kloss was appointed by the Board on July 15, 1918, as agent for teacher-training in household arts schools. Prior to graduation from Simmons College, School of Home Economics, in 1915, Miss Kloss taught in the grammar schools of Townsend and Ashburnham, Mass. In 1915 and 1916 she taught home economics subjects and managed the school lunch room at the Winchester High School, Winchester, Mass. From 1916 to 1918 she was assistant and associate director of the vocational training department at the Women's Educational and

Industrial Union and a member of the home economics staff, with supervision of practice teachers in home economics, and assisted in the institutional management work at Simmons College.

On Aug. 19, 1918, Carl E. Herrick was appointed as administration agent for the vocational department of the Board of Education. He began work in this position on Sept. 17, 1918. Mr. Herrick is a graduate of the commercial department of the Beverly High School. For one year he held the position of secretary at Troy Conference Academy, Poultney, Vt. For part of two years he was a salesman with the Burroughs Adding Machine Company, and from 1912 to 1918 he taught in the commercial department of the Beverly High School, and acted as supply agent and purchasing agent for the school department office. His particular assignment has to do with the examination and following up of matters pertaining to financial and vital statistics, productivity sheets, trade records, life-history cards, non-resident cases, and special assignments.

On Sept. 16, 1918, William D. Parkinson was appointed agent in charge of the division of vocational teacher-training. Mr. Parkinson is a native of Maine and a graduate of Dartmouth College. He has been in educational work in Massachusetts since 1886, serving as principal in Taunton and as superintendent of schools successively in Falmouth, Amherst and Waltham. He has been employed from time to time as instructor in teachers' institutes and summer schools under the auspices of the Board of Education, and has been a contributor to the discussion of many of the educational problems of the State.

To the position of agent in charge of supervision of day and evening industrial schools for men and boys the Board appointed Arthur S. Allen, whose service commenced on Nov. 18, 1918. Mr. Allen successfully conducted a lumber and wood-working business in New Bedford for a number of years. He served as instructor in the woodworking department of the New Bedford Vocational School from November, 1911, to June, 1913, and as director of the school from August, 1913, until his employment as agent of the Board.

To the position as temporary director of research the Board appointed Leonard M. Patton for a period of five months, dat-

ing from Feb. 1, 1918. Mr. Patton secured leave of absence from his duties as headmaster of the Edward Everett school district, Boston, for this period, and continued his duties on the staff until July 1.

Mr. Walter I. Hamilton, who had been a member of the staff of the Board continuously from Oct. 12, 1915, was granted leave of absence from Feb. 1 to June 30, 1918, for service with the Federal Board for Vocational Education. At the expiration of his leave of absence Mr. Hamilton offered his resignation, to take effect September 1, in order to accept a permanent position with the Federal Board. Mr. Hamilton's long and varied experience with the work of the Board made him an especially well-qualified member of the staff. His resignation was accepted with regret.

Mr. Chester L. Pepper, after a service of over four years as agent for industrial education, resigned on Oct. 26, 1918, to take a position with the Federal Board for Vocational Education at their New England district office of the rehabilitation division. Mr. Pepper had given earnest service to the department, and was especially active in the conduct of war-training classes. His resignation was accepted with regret.

PUBLICATIONS OF 1918.

During the year the Board has issued the following bulletins and circulars: —

Bulletins, 1918.

Number.	Whole Number.	TITLES.
1	92	Instruction and Practice in the Duties of Citizenship.
2	93	Educational Directory, 1918.
3	94	Supervised Study and the Longer School Day.
4	95	State-aided Vocational Education in Massachusetts. The Smith-Hughes Act — What it is, the Board created by it, the Funds it provides, the Conditions it imposes, our Plans regarding it.
5	96	Report on High Schools.
6	97	Teacher's Manual of Geography for the Upper Elementary Grades and the Junior High School.
7	98	Educational Legislation, 1915, 1916, 1917, 1918.
9	100	Administration of Independent Day Household Arts Schools.
10	101	Plans for Massachusetts Board for Vocational Education.
11	102	Report to Federal Board on Smith-Hughes Act, Fiscal Year 1917-18.

Circulars of Information, 1918.

Number.	TITLES.
1	Legislative Proposals, 1918.
2	Report of the Committee on Resolutions of the Fourth Annual Conference of Massachusetts School Administrators.
3	Persons holding a Certificate of Eligibility as Superintendent of Schools in a Superintendency Union in Massachusetts.
4	Resolutions of Joint Convention of School Administrators.

LEGISLATIVE PROPOSALS, 1919.

Owing to the fact that a Special Commission on Education was appointed under the provisions of chapter 88 of the Resolves of 1918 for the purpose of making a general survey of education in the State, the Board presented no legislation to the 1919 session of the General Court. Both the Board and the Commissioner of Education have been given opportunity by the Commission to present very fully the educational needs of the State.

The Commission has recommended legislation on some of the important matters discussed. Among these are the following: —

1. The greater equalization of educational opportunity throughout the elementary and secondary schools of the Commonwealth. Massachusetts ranks lowest among the States of the Union in the per cent to which, out of State funds, money is appropriated for the purpose of equalizing educational opportunities. Less than 2 per cent of the entire cost of education in the Commonwealth, other than State-aided vocational education, is appropriated from State funds. This is a condition requiring careful scrutiny, in view of the widely divergent abilities of the several towns and cities in the State to maintain schools of proper standard.

2. Provisions for establishing higher standards of remuneration and qualification of the teaching force. All agree that the essential factor in the establishment of a good school system is that there shall be properly qualified teachers. Only by maintaining its teaching force at a high level of efficiency can a State hope to develop a satisfactory system of education.

From statistics gathered a year ago it was found that 1,976

teachers in the Commonwealth were teaching for less than \$550 a year. The Legislature last year enacted a law which provides a minimum salary of \$550, in towns with a valuation in excess of \$1,000,000, from Jan. 1, 1919. With the passage of this law there still remain approximately 600 teachers, distributed through almost 100 towns in the State, who receive less than \$550.

The bill to establish a general school fund, Senate, No. 351 (1919), proposed by the Special Commission on Education, is designed to accomplish the needs set forth in paragraphs 1 and 2. Through an annual appropriation of approximately \$4,000,000 it is proposed that educational opportunities be equalized throughout the Commonwealth, and that adequate salaries be paid properly trained teachers. The Board earnestly hopes that this bill may be speedily enacted into law.

3. Provision for gradually increasing the requirements of the compulsory education law. In view of the rapidly increasing demands upon the intelligence of our people it seems that the time has come when the State should provide that all normal children shall, in the near future, receive at least an elementary school education before they finally terminate their school courses. This probably can best be brought about by a gradual raising of the educational requirements, the leaving age, and through the establishment of compulsory continuation schools. Bills have been proposed, through the report of the Special Commission, to bring about this condition.

4. Provision for compulsory continuation schools. The Board presented very fully its views upon the subject of continuation schools at hearings given by the Special Commission on Education, and takes this occasion to reaffirm its belief that Massachusetts should give careful and immediate attention to the need for further educational opportunities for almost 50,000 children who annually find it necessary to leave school to seek employment. Attention to this matter is particularly significant at this time, in view of the far-reaching legislation recently passed as a part of the Fisher Bill in England. By a gradual process the Fisher Bill provides a continuation school program extending through four years, at the rate of 320 hours a year, for both sexes in all industries.

The measure presented by the Special Commission, providing for continuation schools in Massachusetts, is in substance the same bill that has been before the General Court for the past two years. It is believed that the industrial character of our Commonwealth, and the dependence of its prosperity upon the most extensive educational opportunities for all its people, indicate that there should be no delay in providing for compulsory continuation schools.

5. Provisions for physical education on a State-wide basis. Widespread discussion has been given in the Commonwealth during the past two or three years to the subject of physical and health education in the schools. Two excellent reports have been made, as follows: Report of the Special Commission on Military Education and Reserve (December, 1915); Report of the Special Board on Physical Training (House, No. 1663, 1917).

The Special Board on Physical Training, appointed to study this subject, reported the bill which for the past two years has failed of enactment. In the meantime, several other States have adopted in part the recommendations of the two Massachusetts commissions, and have made serious beginnings in the direction of establishing thoroughgoing programs of physical education. The results of the examinations given under the draft have served only to emphasize the necessity of providing physical education for all the youth of the State. A bill covering this subject will be before the General Court as a part of the report of the Special Commission this year.

6. The State participation in Americanization work. All of the States, but especially those in which are to be found large foreign-speaking populations, will undoubtedly give immediate attention to the so-called Americanization work. Massachusetts is among the States where this matter is of great importance. According to reliable statistics there are approximately 350,000 persons over ten years of age in the Commonwealth who are unable to read or write English. The majority of these are undoubtedly of foreign birth. It is obvious that for social, political, and economic reasons this large body of people, representing one-tenth of the population, should, at the earliest possible moment, become assimilated. The immediate object is

instruction in the English language and civic duties and responsibilities. The Bureau of Immigration is at work upon this problem, and is securing gratifying results. A beginning has been made by the Board of Education through the special classes in citizenship organized by the Department of University Extension, and through the employment of an agent for immigrant education whose duty it is to organize classes for the training of teachers to carry on the work. This matter has been given attention in the report of the Special Commission on Education.

Other important matters with reference to the needs of the schools of the State were discussed, upon invitation, before the Special Commission. These covered such matters as the duties of school committees and superintendents of schools; needed changes in the laws relating to public schools; distribution of the Massachusetts School Fund; and the incorporation of educational institutions. The Special Commission has incorporated in its report recommendations for legislation dealing with these matters.

The Board wishes to express its appreciation of the many courtesies extended it and members of its staff during the course of the hearings and the survey of the educational systems of the State. The Board feels, furthermore, that a distinct service has been rendered the State in the report that the Commission has made. The report of the Commission and the proposals accompanying it deserve, and will doubtless receive, widespread public discussion.

Training and Instruction of Disabled Soldiers and Sailors.

One item requiring legislative consideration appears not to have been within the scope of inquiry of the Special Commission on Education. This relates to chapter 230 of the General Acts of 1918, which provides for the training and instruction of disabled soldiers and sailors. At the time this was presented in the form of a bill to the Legislature of 1918, there was no settled policy whatever in the State or Nation with reference to the re-education or rehabilitation of men injured in the naval or military service of the government. The bill, which later became law, was urged for enactment in order that there might be some means provided by which Massachusetts could under-

take this work in case the Federal government should not do so.

After the enactment of chapter 230 of the General Acts of 1918 there was enacted by the Federal Congress the so-called Smith-Sears Act, which provides for the direction by the Federal Board for Vocational Education of the entire program contemplated under the provisions of the Massachusetts act. The Federal act carries an adequate appropriation for doing the work contemplated, and gives to the Federal Board very adequate and complete powers.

Moreover, the Federal act likewise provides, as the Massachusetts act does not, for the maintenance of the men during the period of rehabilitation.

It seemed to the Board of Education that the Federal act so completely covered the entire situation that there was no duty which the State could perform through the division provided by chapter 230 of the General Acts of 1918. The Board, therefore, after consulting through its staff officers with the advisory committee provided for under the act, and finding that committee in harmony with its position, decided to delay the organization of the division contemplated under the act until such time as the matter could be reviewed by the General Court.

As the situation now stands the Federal Board for Vocational Education is charged with complete authority to cover every detail of this program of rehabilitation in so far as it relates to men injured in the service, and has available the means by which to do work committed to it to the satisfaction of the Nation, making unnecessary separate State divisions to deal with the matter. For this reason it is recommended that the act be repealed.

PART II.

REPORT OF THE COMMISSIONER.

FUNDAMENTAL NEEDS IN THE FORMULATION OF AN EDUCATIONAL PROGRAM FOR THE STATE.

For the development of public education in Massachusetts the most conspicuous present need is a far more complete recognition of the responsibility of the State for the education of its citizens.

There is no doubt that public opinion of the State as a whole calls for high standards of educational opportunity for all the youth. Yet this public opinion is not generally effective for all cities and towns. Local inertia, indifference or poverty may, and do, prevent in many instances the realization of an educational program that would be acceptable to the people as a whole.

In many towns and cities of the Commonwealth public education has reached a development not excelled elsewhere in the country. In some of these places this development is due in part to the availability of large local resources of wealth. In other places the people have insisted on having superior schools, even though these were to be secured only with an excessive burden of taxation. These high standards are local. They are not to be regarded as State standards, since large numbers of communities within the State are very far indeed from reaching them.

Massachusetts has thus far failed to recognize in terms of State organization and State support the responsibility of the State for equalizing educational opportunity. There exists, however, a great diversity among the towns and cities with respect to their financial ability to maintain schools. There is, further-

more, a social and industrial situation that makes imperative a high level of general education throughout all communities.

There can be no question that many of the urgent problems of education facing the communities of the State can be solved only through a right organization of the State's resources to an educational purpose. Public education will, in the future, increasingly require that a State formulate a policy of education that will be just to its citizenship and to itself. Massachusetts cannot longer disregard this principle without jeopardy to the educational interest of thousands of its youth. The State cannot hope to hold its educational prestige on the achievements alone of certain of its towns and cities. Other States, recognizing their obligations to their entire citizenship, have taken steps to strengthen education throughout their borders. The economic and industrial welfare of the Commonwealth, to say nothing of other considerations, requires immediate attention to the fundamental educational policy of the State.

The steps that are necessary to establish a State educational system would appear to be the following:—

State School Fund.

First. — There should be established an adequate school fund based upon the principle that the State is to share in the support of education in every town and city.

It is not enough that a State educational fund should be raised and expended on the principle that the strong should bear the burdens of the weak. The question should not be approached with the idea that every locality is finally responsible solely to itself for the education of its youth, and that the State enters the situation only when it finds some towns too poor to maintain schools. As a matter of fact, the State is as much responsible for the quality of educational opportunity in one town as in another, and it should have the means of pursuing an educational program that will result in making every community of the State answerable to the Commonwealth as a whole for the education it gives. This result cannot be secured unless the State itself participates in the maintenance of education throughout its borders.

The question is largely one of responsibility for education. The district system, abolished long since, rested upon the principle that the local neighborhood was responsible alone for the education of its children. That system was found to be entirely inadequate as a just means of providing educational opportunity. The people now have no hesitancy in recognizing their responsibility for the quality of educational opportunity afforded within the limits of a town or city. The arguments for extension of this responsibility to the State as a whole are precisely the same and equally as good as those that were made for the extension of responsibility from the school district to the town. A State school fund based on the principle of the participation of the State in the support of schools would at once raise the level of educational opportunity in those places where it is now below a standard that will be acceptable to public opinion of the State, and would, at the same time, equalize the burden of maintaining public schools.

Standards of Accomplishment.

Second. — There should be an organization to represent the State in its corporate capacity in expressing the will of the people with reference to the program of public education.

At the present time educational standards in Massachusetts lack definition. The schools of the various cities and towns are organized without particular reference to any general or State educational program. To say, for example, that a child is rated in the fourth grade of any school system does not at all imply that he would receive the same classification in any other school system in the State, or that he would be pursuing the same subjects or the same courses if he were attending school in another town. In a State, a large part of whose population is so constantly shifting, this lack of reasonable co-ordination brings loss to thousands of our youth, to say nothing of the confusion it creates in the minds of parents and of citizens with reference to the educational accomplishments of their children as measured by teachers and school officers. No one would argue for an absolute uniformity of education throughout the State, and no one would desire any system which would eliminate individual or local initiative. These can unquestionably

be preserved at the same time that general standards can be better defined and secured.

Within the limits of a city school system there is no difficulty in securing to teachers, within the general requirements laid down, individual initiative and the opportunity to exercise discretion in the administration of the regulations. More broadly, a State may likewise have a program of studies and may fix standards of accomplishment without destroying any desirable measure of local control.

Responsibility of the State with reference to Educational Institutions and Activities.

Third. — There should be some general supervision of educational institutions and activities supported directly by the State. A number of educational activities of the State are of such kind that they must be wholly or in part maintained by direct appropriations of the State. Among such institutions and activities are the Massachusetts Agricultural College, three textile schools, juvenile correctional institutions, and schools for the deaf and for the blind. These and other institutions and activities are directly supported, or supported in part, by the State, and in most instances separate boards of trustees or managers are in charge of them. If confusion and duplication of work and plans are to be avoided, it would appear desirable to provide some method by which the activities of these institutions might be co-ordinated. This co-ordination should not extend to the point where it will undertake to direct and control the routine of the institutions. It should, however, be of such a character as would provide a general clearing house through suitable reports.

Closely related to the foregoing is the creation and organization of educational institutions not supported by the State. While there is not the same kind of responsibility on the part of the State with reference to these institutions that there is in the case of those supported by public funds, yet there is a responsibility of another kind hardly less important. Whenever the State charters any educational institution, it becomes in a measure a guarantor of the quality and kind of education to be offered therein. If, for example, the State charters a medical school whose graduates presumably will deal with the

important matter of public health, then it would appear that citizens would have a right to assume that the quality of the training afforded by such an institution is of the kind in which they can repose confidence. The State rightfully protects its citizens against the incorporation of business enterprises that would deal fraudulently with the citizens in the matter of business or financial organization. No less is there an obligation that the State protect its citizens from inferior or fraudulent institutions dealing with education. The ease with which educational institutions are chartered is in evidence from the large number of existing charters that have as yet no institutional connection. For the protection of its citizens the State should provide some suitable procedure that will insure a reasonable guarantee that the obligations implied in establishing an educational institution will be met at the beginning and sustained during the life of the institution.

Teachers' Salaries.

Fourth. — There should be some provision for establishing higher standards of remuneration of the teaching force.

The essential factor in the school is, of course, the teacher. A school system cannot be maintained at a high grade of efficiency except upon the basis of a high grade of teaching service. This high grade of service in turn cannot be assured unless an adequate compensation is attached to the work of the teacher. One may at once discover a weak point in the Massachusetts school system by reference to the statistics that disclose the wages paid to teachers in various parts of the State. Last year it was found that nearly 2,000 teachers were receiving salaries of less than \$550 per annum. The Legislature fixed the minimum salary at \$550, but made an exemption of approximately 600 teaching positions in towns having a valuation of \$1,000,000 or less. Not only were the former salaries grossly inadequate to the maintenance of a high standard of teaching service, but the minimum as now fixed in the law cannot by any possibility maintain for the State a quality of teaching service such as should be satisfactory to the State. Without any question the one step that would most promptly and radically improve education in Massachusetts would be in

the direction of establishing a much higher minimum of teacher's wage, thus giving an inducement to competent persons both to enter and to remain in the teaching profession. The continuance of the present inadequate salaries will prove to be most disastrous, not only to teachers but to the youth of the Commonwealth, since standards of educational opportunity cannot be sustained upon any such wage scale.

The Board of Education made a recent survey of the State with reference to teachers' salaries. Conditions in certain typical towns and cities are set forth in tables on pages 28 to 31.

Closely allied with the compensation received by teachers are the expenditures of teachers. One needs but secure information on the subject of living expenses of teachers to be convinced that present salaries do not in most instances provide a living and saving wage.

In order to determine to what extent present salaries do provide a living and saving wage, an inquiry was recently made of more than three hundred teachers from all parts of the State with salaries ranging from the lowest to the highest.

As will be seen by reference to the table on pages 32 to 35, 92½ per cent of the total income of these teachers was comprised of salary earnings, 2½ per cent of other earnings, and 5 per cent of receipts other than earnings. Over one-quarter of the teachers assumed additional work in order to supplement their salaries, earning in various ways an average amount of \$75 for the year. Nearly one-third obtained from sources other than earnings an average of \$135 for the year. In many instances, these latter receipts represent borrowings from past savings. The necessity felt by many teachers of assuming additional work and of borrowing money, in order to meet their expenditures, is evident from the fact that 90 per cent of the salary earnings of the whole group was required to meet ordinary expenditures, thus leaving a very small margin for insurance and savings.

Of the total amount expended by this group of teachers, the returns show that 45 per cent was expended for board and room during school session; 7 per cent for board and room during vacation periods; 20 per cent for clothes; 5 per cent for medical and dental attention; 3 per cent for professional improvement, literature, meetings, courses, etc.; 9 per cent for

recreation, social activities, travel, books of pleasure; 4 per cent for church and charity; and 7 per cent for support of dependents.

Over one hundred teachers, or about one-third of the whole group, reported no expenditure for board during vacation periods. If it were not for this contribution by many of the homes of these teachers, the average total expenditure would amount to nearly 94 per cent of the salary earnings, instead of 90 per cent as shown in the table. It is of further interest to note that one-third of these teachers contributed an average amount of \$134.51 to the support of dependents, and nearly 99 per cent contributed an average amount of \$27.94 to church and charity.

Under savings, about two-thirds of the group reported an average allotment of \$53 to the teachers' retirement fund and insurance, and about the same number reported an average allotment of \$100 to "other savings," such as Liberty Bonds and savings bank deposits. Hardly more than one-half reported any cash on hand from the income of the year, and over 10 per cent reported an actual deficit.

Viewing the returns as a whole, they clearly confirm the general belief that the salaries of Massachusetts teachers fall far short of what is necessary to provide a reasonable standard of living and a sufficient amount of savings for the periods of emergency and retirement. While a gratifying number of towns and cities granted substantial salary increases during the war, the situation is such that prompt action on the part of the State is necessary if we are to safeguard the interests of all the youth by retaining in educational work men and women of proved ability, and by attracting to the teaching profession young men and women of excellent promise. (See tables on pages 32 to 35.)

Qualifications of Teachers.

Fifth. — There should be established some means of fixing standards of qualifications of teachers.

Closely related to the compensation of teachers, and, of course, largely dependent upon it, is the question of their qualifications. Massachusetts long since, in the establishment of normal schools, accepted the theory that teaching is not a

profession to be entered upon without special training. For many years the State has expended large sums of money in order that the youth of the State might have trained teachers. Despite this established policy and this expenditure of funds for the training of teachers, there are still numerous communities in the State whose children do not have the opportunity of instruction by trained teachers. Occasionally it may happen that a trained teacher recently graduated will for a short period serve in one of these communities. With a little experience, however, she goes to another community able to pay a higher salary, and her place is taken by another teacher of inexperience or of inadequate training. Statistics recently collected indicate that there are nearly 2,500 teachers in this State employed in elementary schools who are entirely without special preparation for the work of teaching. Under no possible conception of justice can it be argued that certain children of the State should always and continually have a high grade of trained and experienced teaching service available to them while other children shall be constantly subjected to service untrained and inexperienced. Therefore, along with provision for the adequate compensation of teachers there should be established standards of preparation and qualification which must be met by those who are to undertake the teaching of the youth.

The foregoing represent the outstanding and fundamental needs of Massachusetts in the formulation of her educational program for the future. Incidental to these are certain imperative reforms that are required in the immediate present. While these reforms are incidental, they are by no means unimportant.

1. *Continuation Schools.*

First among these is probably the establishment of a program which will result in the accomplishment of an elementary school course by all prospective citizens of the Commonwealth. An analysis of statistics discloses the fact that large numbers of youth are leaving school before the completion of the elementary school course. On so inadequate a foundation, it is difficult to conceive that a sound citizenship can be generally developed. A modification of the compulsory education law, so that the requirements will rest upon terms of educational ac-

complishment as well as of age attainment, would look forward to the relative solution of this problem. Coupled with this is the need of providing some continuation school opportunity to those of the youth whose education is prematurely interrupted. The State already guarantees to those of the youth who can remain at school extensive educational facilities. Any youth whose circumstances permit him to remain in school is guaranteed by the State not only a complete elementary school course, but a secondary school course as well. Large numbers of the youth, however, cannot avail themselves, to the full, of these privileges. It would seem, therefore, to be a measure of justice to them, as well as one calculated to insure the security and welfare of the State, if to these latter there should remain available through continuation schools some opportunity for the further perfecting of their education. At the present time Boston is the only city in the State that has availed itself of the provisions of the law under which continuation schools may be established. Many thousands of eligible youth reside in other cities and towns of the Commonwealth. It would seem to be in the interest of justice to these youth and to the State itself to provide compulsory continuation schools for all children within certain age limits.

2. *Physical Education.*

Recent disclosures through the draft with reference to the need of a general system of physical education serve to emphasize a need already somewhat apparent for the establishment of a properly directed State-wide system of physical education. Legislative commissions of this State have already reported in favor of the establishment of some such system, and several other States have already taken effective steps in the direction of providing State-wide programs of physical education. This is among the urgent needs of education at the present time.

3. *Removal of Illiteracy.*

Another incidental but important educational project that should be at once undertaken seriously by the State is that which would have as its object the removal of illiteracy and the

universal use of the English language by all our people. The fact that approximately 350,000 of the citizens and prospective citizens of the State are unable to make use of the common medium of communication of the people is itself suggestive of the dangers which surround such a condition.

These suggestions serve to point to the necessity of having a properly organized State system of education. Notwithstanding the high ideals of education that obtain among our people, experience shows that local responsibility is not sufficient in all localities to insure the accomplishment of those results that are required by a State under modern conditions. All of the cities and towns working together in a State program for the accomplishment of results such as the enlightened public opinion of a progressive State will increasingly demand is the imperative need of the Commonwealth.

A COMPARISON OF THE SALARIES OF PRINCIPALS AND FULL-TIME TEACHERS IN CERTAIN CITIES AND TOWNS OF MASSACHUSETTS REPRESENTING (A) HIGH, (B) MEDIUM, AND (C) LOW VALUATION PER PUPIL (JAN. 1, 1919).

Consolidation of Schools and Transportation of Pupils at Public Expense.

With one exception no item of school expenditure has grown as rapidly during the past ten years as the item of transportation of pupils. Massachusetts is now spending over \$500,000 annually for this purpose, which is more than double the amount spent ten years ago. This is largely the result of one of the most significant developments in school administration within the past half century, namely, the tendency on the part of cities and towns to consolidate their schools where circumstances are favorable, and to transport the pupils to such central schools at public expense. The extent to which this policy has been followed in this State is the more noteworthy in view of the fact that Massachusetts, in contrast to many other States, has never granted special aid to consolidated schools as such.

In view of the nation-wide interest in the consolidation movement, and for the information of local school officials who are dealing with problems of school consolidation and transportation, a study of this subject has been made, and the results incorporated in this report.

I. HISTORICAL BACKGROUND OF THE CONSOLIDATION MOVEMENT.

Massachusetts is considered to have been the pioneer State in recognizing and encouraging a policy of school consolidation. It is probably true that few States, if any, have carried the program farther. To appreciate fully the progress made in school consolidation in Massachusetts, it is helpful, first, to picture the state of decentralization of schools which was antecedent to the consolidation movement.

1. The District System.

In Massachusetts the town or city is the legally constituted unit of school administration and control. For a period of about one hundred years following the Revolutionary War, however, the school district, a subdivision of the town, was in

authority. In 1789 the law first recognized the school district by authorizing towns to be divided into districts for the apportionment of school money and the management of school affairs. In many towns this plan had been in operation for a long time, and when sanctioned by law it was generally adopted throughout the State.

By 1827 the powers of the district had been greatly increased by the General Court. It had been made a corporation, could tax itself for funds to build and furnish the schoolhouse, and in practice selected its teacher through its prudential committeeman, who was usually chosen by the district. Martin, in his "Evolution of the Massachusetts Public School System," characterizes the district school system of 1827 as "the high-water mark of modern democracy, and the low-water mark of the Massachusetts school system."

By 1850 the district system was in operation in 316 of the 333 towns and cities. There was a total of 2,818 school districts, — an average of 9 in a town. Some towns, however, had as many as 20, 30, or even 40 separate districts. The inefficiency of this form of school control as developed in Massachusetts is well illustrated by an experience which Horace Mann relates in the fourth annual report of the Massachusetts Board of Education. He writes as follows: —

In my circuit, last autumn, through a part of the State which I had not visited before, I saw six schoolhouses all situated on the same road, the extreme ones of which were but a mile and a half apart, and of course only three-fourths of a mile from a central point. In these the uniform practice had been to employ six females in summer, and six males in winter. And thus, as it regards the winter schools, the wages and board of six men had been paid, and fuel for six fires provided, when one male principal, — who might have received, and been worthy of, the most liberal salary, — with suitable female assistants, if necessary, might have accomplished ten times the good at a greatly reduced expense. All this was acknowledged as soon as pointed out, and assurances of a change gratefully given. How great would be the gain if the spirit of economy, which is often so active at the town meeting when the money for schools is granted, could be transferred to its expenditure by a wiser mode of appropriation.

From the very beginning of his term as secretary of the Board, Horace Mann recognized in the district system one of

the greatest barriers to educational progress, and he instituted against it one of the most memorable sieges in educational history. In 1838 a law was passed authorizing two or more districts to establish a union school. In 1850 the General Court passed a law instructing a town how to dispose of its district schoolhouses in case it decided to abolish the districts; and before 1860 from 80 to 100 towns and cities containing one-half the inhabitants of the State had voluntarily abandoned the district system.

At about this time the contest began in the General Court. In the spring session of 1859 the district was abolished, but the resentment on the part of many towns was so keen that it was speedily restored by the Legislature in the succeeding fall. In 1869 the district was again abolished, but virtually restored by the act of 1870, which permitted any town to re-establish school districts by a two-thirds vote. Twelve years later the legal control of the schools by the district finally terminated.

2. *Beginnings of Consolidation.*

When the school district was finally abolished in 1882, it was found that only about forty towns had retained it to that date. Indeed, not only had the people of most communities come to realize the serious limitations of the district as a unit of school control, but there was also taking place a far-reaching social and economic transformation which deprived many districts of their power. In the early part of the nineteenth century Massachusetts was an agricultural State. By 1850 more people were engaged in manufacturing than in agriculture. From no cities and no railroads in 1800, there had come to be seven cities by 1850, and all the main lines of railroad were in operation. By 1850 the factory system had become well established, and busy industrial communities grew up wherever water power was available. The movement from the rural districts to the larger centers, and also to the west, left stranded many of the once flourishing district schools, and depleted many rural towns of their wealth and population. A wide-spread movement to consolidate the so-called "feeble schools" was the necessary outcome.

3. *Early Consolidated Schools.*

It would be difficult to say when and where the first consolidation of schools occurred in Massachusetts. In the larger towns centralization of schools occurred at a very early date. The Latin grammar schools of the seventeenth century were centralized schools, each school being established for the benefit of the whole town, and the pupils being required to know how to read before admission was granted. For the purpose of supplying this elementary knowledge of reading, dame schools had been established by many towns before the Revolutionary War. By 1850 a third division, the intermediate school, had become common. In 1847 Boston instituted the graded school with separate classrooms, a type which was widely and speedily copied in the larger towns of the State.

In the rural communities progress was not so rapid. By 1869, however, enough centralization had been effected to bring about the passage of an act to authorize towns to raise and appropriate money for conveying pupils to and from the public schools, the money so raised to be expended by the school committee at its discretion. Towns immediately took advantage of this provision, both to convey remotely situated pupils to the high school, and to convey elementary school pupils from small districts to larger ones.

The records of the town of Greenfield show that three small schools were united in 1869 and a saving of \$175 accomplished after paying \$127.50 for conveyance of pupils. The town of Quincy took similar action in 1874. Doubtless other towns were equally alert in acting under the new law. So far as can be determined, the town of Montague was the pioneer in closing a number of district schools and conveying the pupils to a central school according to a well-considered plan of procedure. This was begun in 1875. At the same time, the older pupils living at Turners Falls — a village of Montague — were being transported by rail to the high school department of the central school. By 1879, 40 or more pupils were being conveyed from various parts of the town to the graded schools at the Center, at a saving of from \$200 to \$500 annually. Concord probably affords the earliest example of complete consolidation,

having closed all its district schools, the first in 1879 and the last of five in 1887. The pupils from these districts were transported to a new eight-room building at the Center.

II. PROGRESS OF THE CONSOLIDATION MOVEMENT.

That the course followed by Montague and Concord was illustrative of what was taking place in many other communities as early as 1880 is evidenced by the following statement of Secretary John W. Dickinson, in his annual report of 1880, to the Massachusetts Board of Education. Secretary Dickinson recommended "that the towns unite their very small schools, if they happen to have any, into larger ones. If necessary, a small appropriation may be made for the transportation of those pupils who would otherwise be obliged to walk a long distance. This plan is already adopted in many towns, and wherever it has been faithfully tried it has proved eminently satisfactory."

In response to an inquiry made by Superintendent Eaton of Concord in 1893, 15 cities and towns reported that they were conveying pupils to the high school only, the total number of pupils so conveyed being 462. One hundred and twenty cities and towns reported that about 250, or 40 per cent, of their outlying district schools had been closed since the consolidation movement began, and a total of nearly 2,000 pupils were being transported at public expense.

A further inquiry was made in 1898 by G. T. Fletcher, agent of the State Board of Education, and it was found that of 200 cities and towns reporting, about 65 per cent had closed and consolidated some schools.

1. *Transportation Expenditures.*

The steady growth of the movement is reflected in the table below, which shows the increase of expenditures for transportation since 1888-89, when the first report of such expenditures was made to the State Board of Education.

TABLE 1. — *Growth of expenditures for transportation in Massachusetts.*

YEAR.	Number of cities and towns transporting pupils.	Amount expended for trans- portation.	Per cent increase for each five-year period.
1888-89,	104	\$22,118 33	-
1893-94,	109	63,617 68	187.6
1898-99,	251	127,409 22	100.2
1903-04,	298	194,967 35	53.1
1908-09,	314	292,213 33	49.8
1913-14,	325	425,274 11	45.8
1917-18,	331	582,681 17	36.6 ¹

¹ Four years.

The striking increase in the funds devoted to transportation, as shown above, is entirely disproportionate to the increase of expenditures for other school purposes. While there was expended for the general support of schools in 1917-18 five times as much as in 1888-89, there was expended over twenty-six times as much for the item of transportation. The enrollment of pupils has hardly doubled since that time. Although the rate of increase in transportation expenditure has been declining, yet during the past ten years the amount of funds devoted to this purpose has increased 119 per cent as against an increase of 76 per cent in the expenditure for general school support. A portion of the increase in transportation expenses may be chargeable to the advancing cost of conveyance, and to the tendency to permit children living nearer the schoolhouse than formerly to share the benefits of transportation. This amount, however, is relatively small, and the major part of the increase reflects real progress in school centralization and consolidation.

2. *Character of School Buildings.*

The present number, size, and value of school buildings in Massachusetts as compared with earlier times is another striking index of the degree to which the consolidation movement has been carried. In 1838, when Horace Mann made his famous report on schoolhouses, there were approximately 3,000 schoolhouses in use having an average value of \$200, and ac-

commodating an average enrollment of 42 pupils. Practically all of these early schoolhouses were of the one-room, district type. In 1867-68 there were 3,350 schoolhouses having an average value of \$2,866, and accommodating an average enrollment of 81. The one-room type was still predominant. At the present time there are 3,001 school buildings in use having an average value of \$31,477, and accommodating an average enrollment of 202.

It is rather striking to note that we have at the present time the same number of buildings that were in use in the days of Horace Mann, but our present schoolhouses have an average value one hundred and fifty-six times as great, and an average enrollment of four times as many pupils as in those early days. The present number, size, location, and value of public school buildings in Massachusetts are shown in the following tables: —

TABLE 2. — *Public school buildings.*

3. *Aids to Consolidation.*

A number of important conditions have served to hasten the remarkable development of school centralization evidenced in the two preceding tables showing the growth of transportation expenses and the change in the character of the school buildings. In the first place, the urban movement, well begun by 1850, had steadily continued, until in 1915 about 40 per cent of the people in Massachusetts lived in cities of 100,000 or more population, and not quite 6 per cent lived in towns of less than 2,500 inhabitants. People have not only moved in large numbers from the rural towns to the cities, but they have moved within the towns from the sparsely settled portions to the villages.

Furthermore, the decided advantages of the graded schools as compared with the small "mixed" schools became better understood as time went on, and school committees, anxious to give all children equal educational opportunities, found it desirable to close the small schools and transport the children to the graded schools in the villages.

In many instances, also, school committees found it more economical to transport children than to maintain numerous small schools. Early school reports show that some towns were educating children in small rural schools at an annual per capita expense of \$40 or \$50 a year, whereas the per capita cost in the larger graded schools did not exceed \$10 or \$15. From an inquiry made in 1898 it was determined that 60 per cent of the 200 towns replying found consolidation cheaper than the old plan; 15 per cent found the cost the same; and 16 per cent found it more. It appears, therefore, that both motives of economy and of educational efficiency were operating to promote the centralization movement.

The growth of the supervision of schools by school men who gave their full time to the work undoubtedly hastened school consolidation. In 1869, when transportation of pupils at public expense was first authorized, only 11 cities and 6 towns were employing full-time superintendents. In 1888 towns of limited valuation were authorized to unite in employing superintendents. By 1895 nearly three-fourths of the State was under supervision, and in 1902 a law was passed making it mandatory

upon all cities and towns to employ superintendents of schools. Massachusetts now has 119 cities and towns each employing a superintendent of schools, and 235 towns formed into 75 unions, each union employing a superintendent of schools. The educational advantages of consolidation of small schools have strongly appealed to this body of men, and they have exerted a potent influence in its favor.

III. PRESENT EXTENT OF CONSOLIDATION.

In order to determine the full extent and character of school consolidation in Massachusetts, a recent inquiry was made of each city and town. Replies received from 295 of the 354 municipalities indicate that about 96 per cent of the teachers, and 97.5 per cent of the public school pupils, are in graded schools of two or more rooms. There are, however, about 800 one-teacher schools having a total enrollment of approximately 15,000 pupils. Thirty-five towns (about 10 per cent) have one-teacher schools only. Twenty-seven of these 35 are the sparsely populated, hill towns of Berkshire, Hampshire, Hampden, and Franklin Counties. One hundred and fifty-two other towns of less than 5,000 population have one or more one-room buildings. The rural school territory in Massachusetts is, therefore, of considerable area, but embraces a very small percentage of the total enrollment of pupils.

Massachusetts towns present many different types and degrees of school consolidation. The topography of the land, the presence or absence of central villages, good roads, electric railways, and progressively inclined people have to a great extent determined the form and degree of school centralization attained. Of the 293 towns of less than 10,000 population, 238 reported relative to the present status of school consolidation. The replies received have been classified in the following tables: —

TABLE 3. — *Consolidation of schools in towns having from 5,000 to 10,000 population, and having high schools.*

[Returns from special inquiry, Jan. 1, 1919, 133 towns reporting.]

	Number.	Per cent.
1. Towns having all pupils assembled in the center or principal village of the town.	36	27.0
Towns having all pupils both high and elementary assembled in —		
(a) One school building,	5	
(b) Two school buildings, a high and an elementary school building,	9	
(c) Three or more buildings,	22	
2. Towns resembling 1 (above), but having from one to three outlying one-teacher schools.	31	23.3
3. Towns having schools located in various parts of the town, but having all elementary school pupils attending schools of two or more rooms.	23	17.2
4. Towns like 3 (above), but having one outlying one-teacher school, .	8	6.0
5. Towns having schools located in various parts of the town, but having a portion of the pupils attending schools of two or more rooms.	35	26.3

Out of the 133 towns reporting in the above groups, 57 towns, or 42.8 per cent, have one or more of the upper elementary grades centralized in one building, as follows: —

Number of towns having centralized —

Four upper grades,	20
Three upper grades,	11
Two upper grades,	23
One upper grade,	3

TABLE 4. — *Consolidation of schools in towns of less than 5,000 population and not having high schools.*

[Returns from special inquiry, Jan. 1, 1919, 105 towns reporting.]

	Number.	Per cent.
1. Towns having all elementary school pupils assembled in the center or principal village of the town.	21	20.0
Towns having all pupils assembled in —		
(a) One building of one room,	5	
(b) One building of two or more rooms,	15	
(c) Two or more buildings,	1	
2. Towns like 1 (above), but having from one to three outlying one-teacher schools.	23	21.9
3. Towns having schools located in various parts of the town, but having all elementary school pupils attending schools of two or more rooms.	6	5.7
4. Towns having schools located in various parts of the town, but having a portion of the pupils attending schools of two or more rooms.	20	19.0
5. Towns in addition to 1 (a) (above), having all elementary school pupils attending one-teacher schools.	35	33.3

Out of the 105 towns reporting in the above groups, 27 towns, or 25.7 per cent, have one or more of the upper elementary grades centralized in one building, as follows: —

Number of towns having centralized —

Four upper grades,	21
Three upper grades,	5
Two upper grades,	—
One upper grade,	1

From the tables above it appears that 57, or about one-fourth of all towns reporting, have all the schools consolidated at the center, or in the principal village. If to this number are added the 54 towns having all schools consolidated in the central village, with the exception of from one to three outlying one-teacher schools, it appears that approximately one-half the Massachusetts towns of less than 10,000 population have consolidated all, or nearly all, schools at the center, or in the principal village.

All the schools of 29 other towns are of two or more rooms, but located in various parts of the town rather than in the principal village. Eight others resemble this type of town, but have from one to three outlying one-teacher schools in buildings of two or more rooms.

From these reports it is clearly shown that in Massachusetts towns of less than 10,000 population a substantial proportion of the consolidated schools are located in villages, and that comparatively few are in the open country. Consolidation in the village is for a great many towns the only practicable plan. The best roads lead to the village. Trolley lines lead there. The post office, banks, stores, churches, halls of fraternal orders are there. In short, the village is the capital of the town, and a larger proportion of the inhabitants of most towns live in the village than in the outlying areas. In view of these conditions the village becomes the logical place for the high school, junior high school, central grammar school, and central elementary school, if such grades are consolidated.

It seems very doubtful whether, under the county or any other system of school control, the number of open-country consolidated schools would be greatly increased in this State. The population in the farming areas outside the villages is usually very sparse. These adjoining areas are not often connected by good roads except by way of the village, and to assemble enough pupils in the rural sections to form strong open-country consolidated schools would be found in most cases too expensive and otherwise impracticable.

It is hardly necessary to state that some distinct advantages appear in the village type of school consolidation. The social development which results from the association of the rural

and village children has a decided value for both. The contact of the rural children with the commercial and industrial life of the town is educative in itself. The realization on the part of school officials that the village school must educate for rural as well as urban life hastens the introduction into the curriculum of agriculture and gardening. This becomes a benefit both to the rural and the village children. To establish one specialized type of school for rural children, and another specialized type for urban children, seems equally dangerous in our effort to develop an efficient democratic society. Opportunities to train for the farm, as well as for the shop, the store, or the professions, should be open to the city boy; and, on the other hand, the country boy who desires to fit himself for the professions, the shop, or the store should encounter no restraint in the character of the school which he is required to attend. Especially in Massachusetts, with so large a diversity of employments, does it seem desirable to have schools with comprehensive programs for both urban and rural children. The consolidation of schools in villages not only does not preclude the carrying forward of such a program, but in many cases materially promotes it.

IV. GENERAL TYPES OF CONSOLIDATED SCHOOLS.

1. *High Schools.*

In 1627 a law was enacted requiring every town of over 500 families to set up a grammar school for the purpose of preparing the youth for Harvard College. These early Latin grammar schools, and the high schools later established in accordance with the law of 1827, were for the benefit of all the inhabitants of the town. The Massachusetts high school from the time of its inception has thus been a central school.

The law of 1827, which required every town of over 500 families to establish a high school, has stood to the present time with but slight modification. A few towns having over 500 families have been exempted from maintaining high schools in view of the fact that satisfactory high school privileges were being otherwise provided. On the other hand, about 50 towns of less than 500 families are maintaining high schools with courses at least four years in length. These small towns have

been receiving a State grant of \$500 annually toward high school support. Beginning this year, however, each such town having a valuation per pupil not greater than the average for the State will receive a State reimbursement of \$250 for each principal and full-time teacher employed in the high school, up to a maximum of \$1,250.

Towns of less than 500 families not maintaining high schools are required to provide tuition and the necessary transportation or board for their pupils attending the high schools of other towns and cities. One hundred and four of these small towns thus provided high school privileges to 2,588 pupils in 1917-18, and the State reimbursed approximately one-half the expense. The amount of the State reimbursement to a town of this class varies inversely as the valuation and directly as the school tax rate.

The following table shows the provisions for high school education in Massachusetts for 1917-18:—

TABLE 5.—*Provisions made for high school education in 1917-18 by the various cities and towns.*

CITIES AND TOWNS.	Maintaining public high schools with courses at least four years in length.	Maintaining public high schools with courses only two or three years in length.	Relying on local academies for high school education.	Providing high school education in schools of other towns or cities.	Reporting no high school pupils.	Totals.	Number of high schools maintained.
Cities,	38	—	—	—	—	38	61
Towns having 500 families, . . .	133	2	6	11	—	152	139
Towns of less than 500 families, . .	50	3	2	104	5	164	53
Totals,	221	5	8	115	5	354	253

2. Junior High Schools and Intermediate Schools.

The junior high school is the newest and one of the most interesting types of consolidated schools in Massachusetts. Such schools are established in 35 municipalities, including 10 cities and 15 towns of over 5,000 population, and in 10

towns of less than 5,000 population. As shown in Tables 3 and 4, 49 other towns have consolidated from one to four of the upper elementary grades into intermediate or central grammar schools. Grades VII and VIII, or VII, VIII, and IX, are those most frequently centralized. In many instances these central grammar or intermediate schools are designed soon to become junior high schools, and have already acquired certain junior high school characteristics, such as departmental teaching and instruction in modern foreign language and in the manual and domestic arts. Massachusetts school officials in general strongly believe in the merits of the junior high school plan, and there are many indications that this is the type of school consolidation which will manifest the most rapid growth in the near future.

3. *Elementary Schools.*

Over 96 per cent of the pupils in the first eight grades of the public schools of Massachusetts are attending schools of two or more rooms.

Course of Study. — There appears a wide variation in the number of years devoted to elementary school work. Eighty cities and towns have a nine-year course, 241 an eight-year course, 7 a seven-year course, and 26 a six-year course. In observing the trend of these figures for a few years past, it is apparent that the ninth year of the elementary school is fast disappearing, and that the eight-year course, now the most common, is being replaced in many instances by an elementary course of six years, and a junior high school course of two or three years. The course of study for elementary schools, as prescribed by law, consists of the following subjects: reading, writing, English language and grammar, geography, arithmetic, drawing, United States history, physiology and hygiene, thrift, and training in the duties of citizenship. These courses are supplemented by such other subjects as local school committees consider desirable. Vocal music and nature study have usually been added. The following table also shows to what extent towns of less than 10,000 population are including household arts, manual training, and agriculture or gardening in the school course of study: —

TABLE 6. — *Towns of less than 10,000 population that include household arts, manual training, agriculture or gardening in the elementary school course, Jan. 1, 1919.*

207 towns reporting out of 241 towns of less than 5,000 population.	60	46	26

V. TRANSPORTATION OF PUPILS AT PUBLIC EXPENSE.

1. *Legal Aspects.*

No important change has been made in the original law of 1869, which provided that towns might raise and appropriate money for conveying pupils to and from the public schools, the money to be expended at the discretion of the school committee. The law is strikingly different from transportation laws of certain other States in that it confers exclusive authority upon local school committees to make transportation regulations. There is no statute nor court decision which has determined for the school committee how great a distance a pupil may be required to walk to school. The feeling has been that no set formula could with any measure of justice be applied to the diversified conditions in different parts of the State, nor even in different parts of the same town.

A great variety of practice has resulted both from the dissimilar conditions and the differing ideas of school committees. One town may transport children living a mile from the schoolhouse, while a neighboring town may convey no children living within two miles of the schoolhouse. Such situations have often given rise to much discussion and dissatisfaction. When school committees seem too hard in their rulings, or parents seem too exacting in their demands, appeal for relief is often made to the State Board of Education. Although the State Board is without direct authority in such matters, it is often able to arbitrate successfully. Occasionally, however, parents take recourse to the courts, relying upon the statute that re-

quires every town to provide and maintain a sufficient number of schoolhouses, properly furnished and conveniently located, for the accommodation of all children therein who are entitled to attend the public schools.

As previously stated, towns not maintaining high schools have been required since 1913 to provide necessary transportation for their pupils attending high schools of other towns. Such expenditures in most cases are wholly or partially reimbursed by the State.

2. *Expenditures.*

Tables 7 and 8 show the number of cities and towns transporting pupils to schools within and without the municipality, and the expenditures therefor. Three hundred and thirty-one, or 93.5 per cent, of the cities and towns made some expenditure of funds for transportation in 1917-18. Only 23, or 6.5 per cent, made no expenditures for this purpose. Of the 316 cities and towns transporting pupils to schools within the municipality 220, or 70 per cent, conveyed to elementary schools only; about one-half of this number, however, is composed of towns of the fourth group, which have no high schools and, therefore, transport pupils to high schools in other towns. Of the cities and towns maintaining high schools, 116 provide transportation to elementary schools only, 6 to high schools only, and 90 to both elementary and high schools.

The total amount expended for all forms of transportation for the school year 1917-18 was \$582,681.17, representing 2.18 per cent of all expenditures for the support of the public schools. Of this amount there was expended for transportation to (a) elementary schools within the town, 76 per cent; (b) high schools within the town, 12.7 per cent; (c) elementary schools without the town, .6 per cent; (d) high schools without the town, 10.7 per cent.

The rate of increase in the amounts annually spent for conveyance since 1888-89 is shown in Table 1.

3. *Number of Pupils transported.*

Two hundred and ninety-five, or 83 per cent, of the cities and towns report that 20,280 pupils are being transported. If the towns not yet reporting are conveying a proportionate

number, the total for Massachusetts will reach nearly 25,000 pupils. Of this number about 5 per cent are being conveyed to one-teacher schools, 73 per cent to elementary schools of two or more rooms, and 22 per cent to high schools. Detailed statistics follow:—

TABLE 7.—*Number of cities and towns transporting pupils to schools within city or town, and expenditures therefor, school year, 1917-18.*

¹ Transported to local academy.4. *Means of Conveyance.*

The largest number of pupils are conveyed by trolley. With the exception of the Boston Elevated Railway Company, all street railways are required by law to transport pupils at half rates. This provision reduces the daily cost of trolley transportation to 5 or 6 cents per pupil. Forty-five per cent of the pupils transported are conveyed by trolley, about 32 per cent by horse-drawn vehicles, about 20 per cent by motorbusses, and 3 per cent by railroad. The motorbus is fast replacing the horse-drawn vehicle because of its superiority in regularity, speed, and general comfort. Detailed statistics are given below.

TABLE 10. — *Methods of conveyance, Jan. 1, 1919.*

	NUMBER OF PUPILS TRANSPORTED BY —			
	Electric roads.	Horse-drawn vehicles.	Motor-busses.	Steam roads.

Group II (61 towns reporting out of 75 towns of 5,000 population or over).	2,975	1,750	836	127
Group III (95 towns reporting out of 116 towns of less than 5,000 population maintaining high schools).	1,662	2,595	1,883	103
Group IV (106 towns reporting out of 125 towns of less than 5,000 population not maintaining high schools).	1,748	1,478	939	324

5. *Distances.*

The table below regarding minimum transportation distances reveals striking variations. Fifty-six of the 295 towns reporting have no definite regulations on this point; 35 per cent of those towns having definite distance regulations have established a mile limit; 43 per cent a mile and a half limit; and 20.5 per cent a two-mile limit. Nearly four-fifths of these towns, therefore, have established the practice of conveying pupils living a mile or a mile and a half from the schoolhouse. In many instances further consideration is given to the younger pupils and to additional pupils when weather or traveling conditions are unfavorable.

TABLE 11. — *Minimum distances, and certain aspects of administration Jan. 1, 1919.*

	Group I (35 cities reporting out of 38).	Group II (61 towns reporting out of 75 towns of over 5,000 population).	Group III (95 towns reporting out of 116 towns of less than 5,000 population maintaining high schools).	Group IV (106 towns reporting out of 125 towns of less than 5,000 population not maintaining high schools).	State (295 cities and towns reporting out of 354 cities and towns in Massachusetts).
1. Number of towns providing transportation to pupils living at a distance from the schoolhouse of: —					
(a) One mile or more,	9	25	30	20	84
(b) One and one-half miles or more,	11	15	39	37	102
(c) Two miles or more,	1	14	36	8	59
(d) Two and one-half miles or more,	—	1	—	2	3
2. Number of cities and towns owning transportation wagons or motorbusses.	2	9	8	9	28
3. Number of cities and towns which secure conveyance drivers through competitive bids.	5	14	33	25	77
4. Number of cities and towns requiring transportation drivers to file a bond or other surety.	2	4	6	5	17

6. *Costs.*

The comparative costs of transportation by motorbus and horse-drawn vehicles are shown in the following tables. Only 2 per cent of the cities and towns report the average daily cost of conveyance by motorbus to be less than 10 cents per pupil; 75 per cent place the cost between 10 and 30 cents; and 24 per cent, as 30 cents or more, the median cost being from 20 to 24 cents, and the modal cost from 10 to 14 cents. Of the cities and towns transporting by horse-drawn vehicles, 2 per cent find the daily cost to be less than 10 cents; 63 per cent report the cost as between 10 and 29 cents; and 35 per cent report a higher rate. The median, however, lies between 20 and 24 cents. On the whole, these figures indicate that transportation by motorbus is found to be somewhat less expensive than by horse-drawn vehicles.

VI. THE OUTLOOK FOR FURTHER CONSOLIDATION.

It is evident that the people of Massachusetts strongly believe in certain forms of school consolidation. From the early days they have heartily supported the centralized town high school. The central junior high school is now fast coming into favor, and in general there is a favorable sentiment toward consolidation of the elementary grades wherever it can be well done.

There are, however, substantial areas in Massachusetts where the consolidation of one-teacher schools is impracticable. Many of the hill towns with sparse population, low valuation, and poor roads present well-nigh insuperable obstacles to the proper transportation of children. In these localities attention will be directed primarily toward making the one-teacher school more effective.

High Schools.

I. HIGH SCHOOL ORGANIZATION AND ADMINISTRATION.

The problems of high school organization and administration are receiving more analytical study to-day than ever before. These problems are becoming more and more important and complex as high schools increase in size and as they extend the scope of their activities. As a result, the high school principalship is receiving greater recognition as an administrative position, calling for specific preparation and administrative abilities of a high order. A national association of high school principals has been organized. Meetings of that association are now held in connection with the meetings of the Department of Superintendence of the National Education Association. In Massachusetts the organization of principals known as the High School Masters' Club of Massachusetts each year makes a comprehensive study of one or more important problems. In 1918 a committee consisting of the following principals made a thorough survey of "Supervised Study and the Longer School Day:"—

Charles T. Woodbury, *Chairman*, Fitchburg High School.

Carlos B. Ellis, High School of Commerce, Springfield.

Herman Gammons, Chelsea High School.

William D. Sprague, Dedham High School.

William W. Woodman, Peabody High School.

The report was published by the Board of Education as Bulletin No. 3 for 1918.

In addition to the State association various groups of principals have organized clubs which hold frequent meetings at which specific problems are considered in detail. A movement is under way to organize a Peripatetic Club to serve as a clearing house for the findings of the several clubs, and to facilitate the State-wide discussion of timely problems by all the high school principals of the State.

1. *Study of the Organization of a High School.*

At the request of the school committee of Clinton, a study of the high school of that town of 13,000 inhabitants was made in June, 1918, by the high school agent of the State Board, Clarence D. Kingsley. After making the study, he discussed his findings informally with the school committee, superintendent of schools, and acting principal of the school, and later submitted his recommendations in writing. These recommendations were adopted by the school committee, with the full approval of the superintendent and acting principal, and his report was printed in the annual report of the school department of Clinton for 1918. While the conclusions were based specifically upon the study of local conditions, many of them would be applicable in other high schools. Consequently, portions of this study are given herewith.

2. *Elimination of the Ninth Grade.*

The school system of Clinton (like that of many other cities and towns) contained nine grades in the elementary school and four in the high school. A large proportion of the high school students were employed afternoons and evenings, with the result that the four years did not afford sufficient time for such students to complete their high school course without either an undue tax upon their physical powers or a lowering of the quality of work. By eliminating the ninth grade and arranging the high school schedule so that those who needed to work afternoons could spend a fifth year in high school, the entire course could be completed by these pupils in a total of thirteen years, which would not involve a longer period for them than the existing arrangement. For those who could devote all their time to school work, the elementary course could be completed in eight years and the high school course in four years, resulting in a net saving of one year.

The recommendation for Clinton was as follows:—

Where the ninth grade is retained in the elementary school a pupil must ordinarily spend thirteen years in order to complete the work of the elementary and high schools. The tendency is strongly in the direction

of the reduction of this period to twelve years. From a survey conducted last year it appears that of the 218 Massachusetts cities and towns maintaining high schools, 141 provided twelve years in the elementary and high school, and 77 provided thirteen years in the elementary and high school. In other words, the number of twelve-year school systems was practically double the number of thirteen-year school systems. Since that survey was made, Springfield and certain other cities and towns have eliminated the ninth grade. Outside of New England a ninth grade is rarely, if ever, found in the elementary schools.

It is believed that this grade not only results in a loss of time, but even tends to diminish interest in school work on the part of many boys and girls. Where the ninth grade has been eliminated it has been found that pupils do quite as well in their high school work as where the ninth grade was retained. The instruction offered by the modern high school is of such value that every boy and girl should obtain as many years of such instruction as possible. The needs of our American democracy make it imperative that high school education shall be pursued by a larger number of pupils. Furthermore, an increasing number of young people should continue their education beyond the high school into colleges, normal schools, technical schools, and other higher institutions of learning; therefore, the saving of a year's time is highly desirable.

I find that nearly all the pupils in the present eighth grade at Clinton will be classified as thirteen and one-half, fourteen, and fourteen and one-half years of age this coming September, and that the average of their ages will be about fourteen years. This is the normal age for entering the high school. Many cities and towns have eliminated the ninth grade by promoting all pupils in the eighth and ninth grades in one year directly to the high school.

It is desirable that pupils during the last year of the elementary school should have the advantages of departmental instruction such as is now maintained in the present ninth grade at the high school building. In addition to accommodating all the high school pupils, this building at the center could also accommodate the present seventh grade pupils.

Consequently, I recommend that the eighth and ninth grades be promoted to the freshman class of the high school, and that the present seventh grade, which becomes the eighth grade next year, be housed in the high school building and be given departmental instruction.

3. *A Schedule providing for the Limited Introduction of Supervised Study.*

Supervised study is now recognized as a desirable feature of secondary education. Many schools, however, find serious practical difficulties in its introduction. If the number of periods in the daily schedule is reduced there will be serious administra-

tive difficulties, including conflicts in pupils' schedules, whereas if the school day is lengthened excessively fatigue on the part of both pupils and teachers may result. Moreover, few teachers have mastered the technique of supervised study, and there is a strong tendency on their part to keep the pupils reciting for the entire period, thus defeating the purposes for which the periods were lengthened. In order to avoid these pitfalls and to meet certain other conditions the following recommendations were made with regard to the daily schedule:—

At the present time the high school day begins at 8.15 and closes at 1.05. Five minutes are devoted to opening exercises. There are six forty-minute periods, with five minutes for change of classes between the first and second periods, the third and fourth periods, and the fifth and sixth periods, and two fifteen-minute recesses between the second and third, and fourth and fifth periods.

I am told that the majority of the families in Clinton have their heartiest meal at noon. In view of the fact that pupils are unable to reach home until after 1 o'clock they cannot eat this meal with the family. Either the householders must keep the dinner warm until the arrival of the high school pupils, or else these pupils must have a cold dinner. This undoubtedly results in undernourishment for a large proportion of the pupils at an age when adequate nourishment is a matter of great importance. Furthermore, the town of Clinton is so small in area and the high school is so centrally located that it would be possible for all pupils who live in the town to go home for their dinner if the noon period were made about an hour and a quarter in length. Consequently, I recommend the adoption of a two-session plan, the morning session extending from 8.10 to 12, and the afternoon session beginning at 1.15.

The present tendency is strongly in favor of a longer school day in order that pupils may be able to do a larger part of their studying at the school, where materials for school work are at hand and where they may have the help and guidance of the teachers. High school pupils need to be taught how to study. Without such instruction they are unable to work to the best advantage. This is one of the chief causes for discouragement and the dropping out of school. To offset this difficulty "supervised study" is being introduced into many high schools. According to this plan the recitation period is lengthened to sixty or seventy minutes so as to include time for recitation and time for study under the direction of the teacher.

However, if all six periods were lengthened to sixty or seventy minutes, it would make a school day much longer than the present high school day at Clinton. I am, therefore, recommending that three of the six periods be lengthened to sixty-five minutes each, including time for change of

classes; that the other three periods be only forty minutes in length, including time for change of classes; and that these periods be so arranged that every class which has five recitations a week will have two or three sixty-five minute periods and three or two forty-minute periods.

I am also recommending that fifteen minutes be devoted each day to setting-up exercises. These exercises are being conducted in many schools, and are growing in favor. They do not take the place of vigorous gymnasium exercises, but give relaxation, increase the circulation, and prevent fatigue. I am suggesting that they come after the second period, where they will be most useful in checking the fatigue element.

The lengthening of the school day here recommended is in harmony with the present tendency throughout the United States.

Schedule recommended.

- 8.10 to 8.15, opening exercises.
- 8.15 to 9.20, long period No. 1.
- 9.20 to 10.25, long period No. 2.
- 10.25 to 10.40, setting-up exercises.
- 10.40 to 11.20, short period No. 3.
- 11.20 to 12, short period No. 4.
- Noon intermission.
- 1.15 to 1.55, short period No. 5.
- 1.55 to 3, long period No. 6.

In order that each subject may share in the longer periods I should recommend that the thirty periods in the week be divided into six non-conflicting groups designated as A, B, C, D, E, F; that the four morning periods, A, B, C, D occur in alphabetical order on Monday, Wednesday and Friday, and in reverse order on Tuesday and Thursday; and that the two afternoon periods, E and F, occur in alphabetical order on Monday, Wednesday and Friday, and in reverse order on Tuesday and Thursday. A subject assigned to the A, B or E periods would, therefore, have three long periods and two short periods, while a subject assigned to the C, D or F periods would have two long periods and three short periods.

PERIOD.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.
<i>Morning.</i>					
1,	A	D	A	D	A
2,	B	C	B	C	B
3,	C	B	C	B	C
4,	D	A	D	A	D
<i>Afternoon.</i>					
5,	E	F	E	F	E
6,	F	E	F	E	F

This schedule provides for supervised study. It allows sufficient time for laboratory work in the sciences without the necessity of scheduling so-called double periods for this purpose. Furthermore, it makes possible effective work in physical training. Pupils cannot obtain the kind of physical training that they need unless they have time in which to put on gymnasium suits, to take vigorous exercises, and to follow the exercise with the shower bath. The sixty-five minute period gives sufficient time for this purpose. The third and fourth periods separately would be too short, but combined as a double period they would give eighty minutes for physical training. The other short period, namely, the fifth period, should not be used for gymnasium work, as it comes too soon after dinner.

4. *Special Provision for Pupils who must work Afternoons and Evenings.*

In many high schools the most serious objection to supervised study and the longer school day is due to the fact that many pupils must, or think they must, earn money while attending school. For such schools the following plan, recommended for Clinton, may be suggestive:—

A very large proportion of the pupils in the Clinton high school are working afternoons, or evenings, or both, as may be seen from the following table:—

Pupils working afternoons, or evenings, or both.

	Boys.			Girls.			TOTALS.		
	Attendance.	Working.	Per cent working.	Attendance.	Working.	Per cent working.	Attendance.	Working.	Per cent working.
Freshmen,	28	16	57	44	5	11	72	21	29
Sophomores,	22	18	82	29	7	24	51	25	49
Juniors,	13	11	85	28	6	21	41	17	41
Seniors,	18	18	100	29	17	59	47	35	74
Totals,	81	63	78	130	35	27	211	98	46

For pupils who must earn a part or all of their support in order to continue in school, some adjustment should be made in the distribution of their time and energy. If they attempt to carry the full amount of school work, either the quality of that work is likely to deteriorate, or there is likely to be a serious drain upon health and vitality. The superintendent of schools and the acting high school principal assure me that they have

observed a deterioration in the quality of the work of these pupils. On the other hand, it would be unfair to pupils devoting their entire time to school work to reduce the amount of work that they may do to the amount that can be carried successfully by the other pupils. The schedule recommended above is so arranged that certain subjects come entirely in the morning and others entirely in the afternoon. Therefore, a pupil who must work in the afternoon can carry in the morning as much work as he can do successfully. As a rule, it would be wiser for these pupils to undertake each year three-quarters of the full amount of high school work and maintain a good standard of scholarship, rather than attempt the full amount of work and either fail in part of it or do work of an inferior quality. There is little educational value in inferior work. With this plan they may complete the high school course in five years without sacrificing the quality of their work. With the elimination of the ninth grade these pupils will complete the elementary and high school work in thirteen years, the time heretofore required of all pupils. On the other hand, the pupil who can devote all his time to school work may complete the course in twelve years.

It may also be observed that the proposed schedule permits the pupils who must work afternoons to obtain a hot dinner at the regular time instead of hurrying home at 1 o'clock, eating a cold lunch, and then hurrying to work. Adequate nourishment is certainly of prime importance to these young persons who are both studying and working.

In order that pupils who work afternoons may not be deprived of any subjects offered by the school, it is recommended that subjects given only in the afternoon in one year be placed in the morning the next year.

As explained later in this report a pupil who is obliged to work afternoons the last year or the last two years only may, if he maintains a good record in the earlier years, be able to graduate in four years.

5. *Requirements for Graduation from High Schools.*

There is some variation in the number of units required for graduation in different high schools. Some confusion, moreover, results from the variety of practices with regard to the amount of credit given for certain supplementary subjects, such as physical training, chorus singing, and drawing. The following recommendations were made for the Clinton high school:—

The requirements for graduation from high school may be expressed in either points or units. A unit is approximately a quarter of a full year's work, and is the amount of credit ordinarily given for a subject which extends throughout the year with five recitation periods per week.

High schools as a rule require fifteen or sixteen units for graduation. A similar requirement is made for entrance to colleges. Exclusive of the

credit given for physical training, chorus singing, and drawing, I recommend that the requirement be set at fifteen instead of sixteen units for the following reasons:—

(a) Students of exceptional ability may earn five units per year and graduate in three years.

(b) Students of less than average ability, or students who find it necessary to work in the afternoon, may take three units each year and graduate in five years.

(c) With one unit leeway the student who fails in one unit in one year may still graduate in four years without attempting to carry a fifth unit in another year, which he would probably be unable to do successfully.

In the Clinton high school it has been customary to define the work in points instead of units, ten points being equivalent to one unit. One hundred and fifty points, exclusive of credit for physical training, music and drawing, may well be required for graduation. In order that these three subjects may receive recognition I think it would be desirable to make the total requirement one hundred and sixty points, with the proviso that not more than ten of these points shall be allowed for work in physical training, music and drawing.

With this requirement students who find it necessary to work one year can graduate in four years in case they earn an average of forty points in each of the first three years, and thirty points in the fourth year, and, in addition, secure, during the course, ten points for music, drawing, and physical training.

The question frequently arises as to whether the high school diploma should designate the curriculum pursued by the pupil. There are serious objections to this practice, some of which were indicated in the following recommendations:—

It seems to me unwise to attempt to designate on the high school diploma the character of the work that the pupil has taken. The name of the curriculum does not convey much real information. Moreover, a pupil should not be deterred from making a wise selection of subjects in order to obtain a certain designation on his diploma. The fact that a pupil has graduated from the college preparatory curriculum will not in itself secure admission to college; he must submit his record in detail. Furthermore, the fact that a pupil has pursued a commercial curriculum is no guarantee that he is fitted for every business position. As may be seen from the commercial curriculum outlined below, it is intended that the work of different pupils pursuing this curriculum shall vary, in order that they may be fitted for a wider range of positions than heretofore. Therefore, employers seeking high school graduates should be encouraged to confer directly with the principal of the school as to the qualifications of those whom they would employ. Consequently, I recommend that the

principal approve each year the subjects to be taken by each pupil, and that the diploma indicate graduation from the school without attempting to specify the courses pursued.

6. *Subjects which are receiving, and should receive, Increasing Attention in High Schools.*

In view of recent progress made in secondary education, and in the light of present-day needs, the following subjects may be mentioned as among those which are receiving, and should receive, increasing attention in secondary schools:—

(a) *The Social Studies.*—In order to afford a satisfactory preparation for the important duties of citizenship every student should have at least two years of work in the field of social studies. Three or four years in this field are desirable in those curriculums in which that amount of time can be devoted to them. The following arrangement is recommended:—

First Year.—Community civics, with a survey of vocations and a specific study of the high school itself.

Second Year.—History to 1700.

Third Year.—European history since 1700, treated as a study of nations other than our own.

Fourth Year.—American history and problems of democracy.

Of these courses those indicated for the first and fourth years appear to be most important, while that for the third year, when adequately presented, should have a direct value on account of the new world order.

(b) *Sciences.*—General science and a course in biology in which emphasis is placed upon problems of personal and community hygiene, sanitation, conservation of natural resources, and the uses of plants and animals to men, are of special value. These two courses have, for the majority of pupils, a more direct bearing upon problems of worthy living than do the usual college preparatory courses in physics and chemistry. Household and industrial chemistry and physics, however, are important in certain curriculums.

(c) *Household Arts.*—The desirable scope of high school courses in household arts is indicated in the Teachers' Manual

on Household Arts, issued by the Board of Education, as follows: —

Clothing: The selection, purchase, making, repair, care, cleansing, and laundering of clothing.

Foods: The selection, purchase, preparation, cooking, keeping, refrigeration, and economic uses of foods, and the care of utensils.

Household management: The arrangement, use, care, furnishings, and textiles of the bedroom, dining room, kitchen, bathroom, and living room.

Child nursing.

Housing: Economic and sanitary use, care, and construction of houses used as homes.

Household accounting, including standards of living, family budgets, and marketing.

Home care of the sick.

Household arts courses which deal thus broadly with the management of the household have not only practical values but also intellectual, cultural, and social values of a high order.

(d) *Oral English*. — Increasing attention is very properly being given to oral English, but it is not ordinarily desirable to organize this work into a separate and distinct course. All English teachers should aim to develop good spoken English on the part of their pupils.

(e) *Physical and Health Education*. — Even if a high school does not have a gymnasium, important work in the field of health education can and should be accomplished. Pupils should be encouraged in the formation of correct health habits. They should have instruction in personal and community hygiene. Setting-up exercises should be conducted daily with a thorough flooding of the building with fresh air. Correct posture in sitting and reciting should be insisted upon.

7. *A Preferred Normal School Preparatory Curriculum.*

For the most successful pursuit or work in a State normal school and in teaching, the following subjects are recommended as especially desirable in high school: —

SUBJECT.	UNITS.	
	Minimum.	Maximum.
English,	3	4
Social studies,	3	3
Science,	2	4
One foreign language,	2	4
Mathematics,	2	2
Household arts,	1	3

In addition students should have music, art, and physical education.

It will be noted that this list includes many of the subjects required for entrance to college, but does not include all of them. In particular, there is less work in mathematics and foreign languages, and more work in the social studies, science, household arts, music, art, and physical education, than is required for college. Normal school principals are quite unanimous in believing that the subjects here recommended are preferable for students intending to go to State normal schools and to become teachers. They have, however, no desire to exclude those pupils who have taken the usual college preparatory curriculum.

It may be noted also that the above subjects are generally recognized as of great value to high school girls in "preparation for life."

These subjects may be arranged in a curriculum in a number of ways. The two following curriculums will show such arrangements, the principal difference between the two curriculums consisting of the placing of mathematics in the last two years in the first curriculum, and in the first two years in the second curriculum. There is no doubt that students would derive much more benefit from work in mathematics if placed in the third and fourth years. On the other hand, those who early intended to go to college rather than to normal school will naturally have taken their mathematics in the first two years.

II. HIGH SCHOOL LIBRARIES.

The need for high school libraries has gained wide recognition throughout the country. The North Central Association of Colleges and Secondary Schools recently adopted a series of standards for high school libraries which will become operative in five years, and after that time no high school will be approved by that association unless it complies with those standards. Various States are giving substantial financial assistance for the purchase of books, in some instances requiring the librarian, or teacher-librarian, to have specific preparation for high school library work. In New England an active association of school librarians has been formed, and its meetings have been held at various high schools where libraries are in operation.

Library development in Massachusetts is severely handicapped in many schools because the building was erected before school libraries were thought of. Practically every new building is making some provision for this important adjunct. The

library should be one of the most, if not the most, attractive room in the building. It should be commodious, and should be carefully planned for its specific purpose. It should articulate with one or more study halls by means of a special passageway, so that pupils may go to the library in any study period without the necessity of securing a pass. By this plan a larger number of pupils will utilize its facilities.

Evidently many schools still regard the employment of a librarian as a luxury. If a school has the funds to employ a reasonably adequate instructional staff it would appear that one member of that staff ought to be a trained librarian, on the ground that the librarian will not only help pupils in the use of books, but she will also supply other teachers with bibliographical, reference, and supplementary material which will make their work more effective.

This year John A. Lowe of the Free Public Library Commission of Massachusetts sent a questionnaire to all the public high schools of the State for data regarding high school libraries occupying rooms used exclusively for library purposes. Eighty high schools reported such libraries, which was an increase of 21 over the number so reporting for the school year 1915-16.

Only 9 high schools reported that a high school librarian was employed. The data from these high schools were as follows: —

High schools each having a librarian.

High school.	Pupils in high school.	Seating capacity of library.	Volumes exclusive of textbooks.	Approximate number of pupils using library daily.	Person in charge.	Is school library a branch of public library?	What departments pay librarian's salary?	Is there co-operation with public library?	Is systematic instruction given in use of reference books?
Attleboro,	418	40	1,079	50	Librarian	Yes	Public library,	Yes	Yes
Belmont,	303	20	1,067	110	Librarian	No	-	Yes	Yes
Brookline,	700	50	2,200	130	Librarian	No	Public library,	Yes	Yes
Clinton,	315	66	775	50	Librarian	No	School department,	Yes	No
Holyoke,	840	50	3,000	-	Librarian	No	School department,	Yes	Yes
Newton Technical,	650	72	5,000	250	Librarian	No	School department,	Yes	Yes
Quincy,	925	-	2,000	200	Librarian	No	School department,	Yes	Yes
Somerville,	1,840	40	2,000	250	Librarian	No	School department and public library,	Yes	Yes
Taunton,	800	80	1,400	137	Librarian	No	School department,	Yes	Yes

Of the remaining high schools 19, while not having a librarian, were each able to report a library of 500 or more volumes, and an estimated average of 50 or more pupils using the library daily. Unquestionably the educational value of these libraries would be greatly increased by the employment of a librarian, and their present use indicates that such employment would be fully warranted. The data from these 19 high schools were as follows:—

High schools not employing a librarian but having a library with 500 or more volumes and an estimated average of 50 or more pupils using library daily.

High school.	Pupils in high school.	Seating capacity of library.	Volumes exclusive of textbooks.	Approximate number of pupils using library daily.	Person in charge.	Is school library a branch of public library?	Is there co-operation with public library?	Is systematic instruction given in use of reference books?

In the small high school, where the employment of a full-time librarian would scarcely be warranted, it is very desirable that some teacher should become qualified to have general charge. In such schools the library should be located in the main room or study hall. A few reading tables, magazine racks, display boards, and ample book shelves should be provided, and the pupils should have ready access to the books and magazines. The library should not be limited to purely reference use, although, of course, where the pupils have constant access to the books there should be supervision to see that no pupil devotes to the continuous reading of fiction time which should be devoted to study. He should, however, have an opportunity to look over interesting books with a view to taking them home for perusal. A library located in a small room is practically useless, as pupils are seldom given access to it.

III. JUNIOR HIGH SCHOOLS.

Eleven cities and twenty-four towns had some form of junior high school organization for the year ending June 30, 1918. These school systems may be classified on the basis of the number of year-grades in the elementary, junior high, and senior high schools, as follows:—

Types of school organization.

TYPE.	Cities.	Towns of over 5,000 population.	Towns of less than 5,000 population.
<i>Twelve-year Systems.</i>			
6-3-3,	Boston.	Easton.	Hamilton.
	Chelsea.	Swampscott.	Topsfield.
	Revere.	- -	Warren.
	Springfield.	- -	- -
6-4-2,	Lynn.	Belmont.	BillERICA.

	- -	- -	Wenham.
6-2,	- -	- -	Andover.
7-3,	- -	- -	Sterling.

Time Allotments.

The time allotments for the different subjects in the junior high schools vary greatly. The following tables show the allotments in 8 cities and towns of over 5,000 population having three-year junior high schools. The data for Springfield were taken from the Forest Park School in which the conditions are reasonably typical for the six junior high schools of that city.

Minutes per week allotted to subjects in the first year of eight junior high schools.

IV. HIGH SCHOOL EDUCATION IN RURAL TOWNS.

The problems involved in providing secondary education in rural towns have received serious attention in Massachusetts for many years. In 1827 the famous law requiring every town of over 500 families to maintain a high school was enacted, and in 1835 smaller towns were permitted to do so. In 1891 towns of fewer than 500 families not having high schools were required to furnish tuition, and in 1913 they were also required to furnish transportation to high schools in other towns or cities. They were not, however, required to expend more than \$1.50 a week for the transportation of any pupil. Thus the law is designed to guarantee to every boy and girl residing in any town or city the advantages of free secondary education.

Many small towns have been maintaining ineffective high schools. In fact, a considerable number attempted to offer a four-year course with only one teacher. In 1902 the State high school grant was established for towns of fewer than 500 families in case a second teacher was added and the high school was approved by the State Board. This grant was only \$300 at first, but was increased to \$500 in 1906. But a two-teacher high school giving four years of instruction labors under severe handicaps. Only a very limited range of subjects can be offered. Moreover, the very small school cannot supply the stimulus which comes from a larger teaching force and a larger student body. Thus the pupils are deprived of many of the most important values of modern secondary education.

As indicated on page 80, the number of four-year high schools of less than 4 teachers, including those in towns of over 500 families, decreased from 81 to 50 in the five-year period from 1913 to 1918. In 1918 the 40 State-aided high schools were distributed as follows:—

0 had 1 teacher.
8 had 2 teachers.
23 had 3 teachers.
6 had 4 teachers.
2 had 5 teachers.
1 had 8 teachers.

The school with 8 teachers served as the high school for 3 towns.

To help meet the increasing cost of small schools maintained voluntarily by towns of fewer than 500 families, a new high school law was enacted in 1918, basing the amount of aid for these towns upon the number of teachers employed. The aid amounts to \$250 for each high school teacher employed up to a maximum of \$1,250 for any one high school. The main provisions of this law are given on pages 80 to 82.

1. *Union High Schools.*

Important progress in providing effective high school education for boys and girls living in rural towns in Massachusetts will result from the establishment of union high school districts, each district embracing several such towns for the purpose of establishing and maintaining one union high school. Already the advantages to be derived from such consolidation are being considered in two groups of towns. The attempt will soon be made, in conference with the school committees, to work out a plan for organizing such unions which will be satisfactory for all the towns involved.

A rural high school having from 150 to 250 pupils with from 7 to 14 teachers can actually offer strong courses, not only in college preparatory subjects, but also in agriculture, home economics, and business subjects. It can maintain an effective program of physical and health education. It can conduct an attractive and stimulating high school library. Through school activities and a democratic school spirit it can provide the kind of training for citizenship which is indispensable to the Commonwealth. Through musical organizations, art courses, and improved instruction in science, history, and literature it can prepare for the worthy use of leisure time, — an objective of education which is receiving increasing recognition as vitally important. Such a union high school can, and should, become a center for community activities, not only for young people but also for adults.

2. *Reduction in the Number of Small High Schools.*

In 1912-13 there were 81 public high schools, each with less than 4 teachers, which were offering four-year courses. Of these —

1 had 1 teacher.
37 had 2 teachers.
43 had 3 teachers.

Between June, 1913, and June, 1918, this number was reduced to 50. Of these —

0 had 1 teacher.
12 had 2 teachers.
38 had 3 teachers.

The decrease in the number of such schools was due to the following causes: —

In Dennis a one-teacher and a two-teacher school were combined into a three-teacher school.

In Chelmsford two schools, each having 3 teachers, were combined into one school, which now has 8 teachers.

Granby and Shirley each had two-teacher schools which were later discontinued.

Nahant had a three-teacher school which became a junior high school.

Bolton, Dudley, and Sterling each had two-teacher schools which became junior high schools.

17 two-teacher schools became three-teacher schools.

2 two-teacher schools became four-teacher schools.

12 three-teacher schools became four-teacher schools.

6 three-teacher schools became five-teacher schools.

1 three-teacher school became a seven-teacher school.

3. *The Provisions of the New High School Law.*

Chapter 198 of the Acts of 1918, entitled "An Act relative to high school education in towns of less than 500 families and to state aid therefor," makes important changes in the laws regarding State aid for high school education. The main provisions of this new law are as follows: —

(a) As heretofore, no direct financial aid is given for high schools maintained by towns of 500 or more families.

(b) If a town of fewer than 500 families maintains a high school approved by the Board of Education, it is to be reimbursed annually a sum, not exceeding \$1,250, determined as follows: for a principal and for each teacher devoting full time to work above the eighth grade, \$250; for a principal and for each teacher devoting part time to work above the eighth grade, a part of \$250 proportional to the amount of time devoted to such work; provided, however, that the valuation of the town per pupil in the average membership of its public schools does not exceed the corresponding ratio for the Commonwealth.

(c) If a town of fewer than 500 families maintains no high school or a high school of less than four years, the town may, under certain conditions, be reimbursed, in whole or in part, for the tuition and transportation of pupils whom it sends to approved high schools of other towns or cities. Such pupils may attend an approved high school in a neighboring State when it appears desirable for them to do so. The town may pay part or all of the cost of board, in lieu of transportation, whenever it is not feasible for the pupils to travel back and forth each day. Special provision is made for pupils who by reason of physical disability cannot attend a high school in another town or city.

(d) The reimbursement for tuition may equal the entire cost if the valuation of the town does not exceed \$500,000; three-fourths of the cost if the valuation exceeds \$500,000 but does not exceed \$1,000,000; and one-half of the cost if the valuation exceeds \$1,000,000. As heretofore, there is no reimbursement if the valuation of the town per pupil in the average membership of its public schools exceeds the corresponding ratio for the Commonwealth.

(e) The reimbursement for transportation, or for board in lieu thereof, is not based upon any expenditure in excess of \$1.50 per week of school attendance, although the town itself is permitted to expend more than that amount. The reimbursement, with the foregoing limitation, may equal the entire

cost if the expenditure per \$1,000 valuation made by the town for the support of schools from funds raised by local taxation for the three preceding years averaged over \$6; three-fourths of the cost if this average was between \$5 and \$6; and one-half of the cost if this average was between \$4 and \$5.

The new law applies to expenditures for high school education beginning Sept. 1, 1918.

Under its provisions the State can aid high schools of less than four years and also reimburse the town for tuition and transportation of pupils sent to high schools in other towns or cities.

This law will greatly assist two groups of towns: first, those not now maintaining high schools but able with State aid to maintain good junior high schools; and second, those now maintaining very small four-year high schools when they might better maintain effective junior high schools and send the older pupils to high schools of other towns or cities.

It also affords much needed assistance to towns so remote from high schools that it is inexpedient for pupils to go back and forth each day.

Furthermore, it bases the amount of aid for high schools upon the number of high school teachers instead of limiting the aid arbitrarily to \$500.

4. *State Aid for High School Education for the Year ending June 30, 1918.*

According to the State census for 1915 there were 165 towns of fewer than 500 families. The complete list of these towns, with the number of families, number of pupils attending high schools, and the State aid therefor, is given on pages 197 to 203 inclusive. The provisions made by these towns for high school education for the year ending June 30, 1918, and the number of towns receiving State aid, may be summarized as follows:—

Towns that maintained four-year high schools,	49
Received \$500 State grant,	40
Did not receive State grant because "valuation per pupil" was in excess of the corresponding ratio for the Com- monwealth,	9

Towns sending pupils to high schools in other towns or cities, . . .	109
For tuition expenditures: —	
Reimbursed in full,	70 ¹
Reimbursed one-half,	20
Not reimbursed,	19
For transportation expenditures: —	
Reimbursed in full,	52 ¹
Reimbursed one-half,	26
Not reimbursed,	31
Towns in which pupils attended local academies,	3 ²
Towns not reporting any pupils as attending high schools,	4
Total,	165

The following 40 towns received the \$500 grant for the school year ending June 30, 1918: —

V. CERTIFICATION OF TEACHERS FOR STATE-AIDED HIGH SCHOOLS.

Teachers in State-aided high schools (of which there were 40 in the year 1917-18) are required by chapter 375 of the Acts of 1911 to hold certificates issued by the Board of Education. Teachers in other high schools and teachers in ele-

¹ Thirty-seven of these towns received reimbursement in full for both tuition and transportation expenditures.

² Hatfield, Harvard, and Marion. In Boxford some pupils attended a local academy, and others attended a high school in another town.

Regulations regarding the approval of high schools for the purpose of certification to State normal schools were adopted by the Board of Education in November, 1915, and issued as Circular of Information No. 9 for 1915. These regulations are given also on pages 222 to 226 of the seventy-ninth annual report of the Board of Education.

The provision for a Class B ranking enables schools that do not quite meet Class A standards to certificate the more capable pupils who desire to enter normal schools.

State Normal Schools.

Massachusetts, as early as 1839, when she founded the first State normal school, adopted the principle of professional training for the teaching profession. Since that time ten State normal schools have been established, and approximately 25,000 persons have been graduated with special training to take up the important duties of the teacher.

The permanent investment in plants and equipment of the State normal schools is in excess of \$5,000,000, and the annual maintenance cost is in excess of half a million dollars.

For the school year ending June, 1918, there were enrolled in the State normal schools 176 men and 2,351 women; 70 men and 103 women were employed as instructors. In the practice schools conducted in connection with all of the schools, with the exception of the Normal Art School, 4,832 pupils were enrolled, and 137 teachers were employed.

Further information concerning the State normal schools may be found in the statistical tables on pages 88 and 165, and in the financial report of the Board of Education, on pages 208 to 217.

The contribution of these schools to the State is made manifest by the results of a recent survey of the professional preparation of the teachers in the public schools of the Commonwealth. Of 15,512 teachers in the public day schools, exclusive of Boston, 8,894, or 58 per cent, are graduates of normal schools. The increasing demand of the towns and cities with reference to professional training makes the normal school system an increasingly important factor in the development of a sound State educational policy.

The conditions brought about by the war affected attendance at the State normal schools, as in all higher educational institutions. An enrollment that should have been approximately 3,000 had decreased, in September, 1918, to 2,069, with a net loss of 793 from the enrollment for September, 1916. The enrollment for the school year 1918-19 is approximately that of the year 1908-09, when 2,013 were enrolled in the State normal schools. A consistent gain over a ten-year period was

lost during the two years of our participation in the war. A part of this loss was due to the entrance into various forms of national service of practically all of the men in the department of practical arts at Fitchburg, and in the commercial department at Salem; the withdrawal of most of the men from Bridgewater and Hyannis; and the participation of some of the women students in occupations allied to military and naval service.

The greatest single factor in the decreased enrollment was the reduction in the size of the entering class. Graduates of secondary schools who intended to enter normal schools were attracted to other kinds of employment with high wages as compared with teaching.

While there is already evidence of a gain in enrollment for the year 1919-20, it is apparent that something looking toward the placing of teaching upon a sound economic basis will have to be done before the normal schools can appeal to a sufficiently large number of young people of the right type to engage in preparation for teaching.

The following table indicates the effects of the war conditions upon normal school enrollment:—

Comparative statistics as to membership, Massachusetts state normal schools.

1. CONFERENCE OF STATE NORMAL SCHOOL INSTRUCTORS.

The opening of the normal schools was postponed from the first until the second Monday in September, 1918, and the entire administrative and teaching force of the ten State normal schools, with the exception of the teachers in the practice schools, convened at the Bridgewater Normal School for a conference of two and one-half days. Those in attendance lived in the buildings of the school.

A program of especial benefit to normal school teachers was arranged, and a most profitable conference resulted. Among the speakers were the following: Dr. W. C. Bagley of Teachers' College, Columbia University; Dr. Paul H. Hanus of the Division of Education, Harvard University; Frederick P. Fish, chairman of the State Board of Education; several superintendents of the State; and principals and teachers in the normal schools.

The need for greater professional co-operation was one of the important topics for discussion at this first conference of normal school forces of the State. Accordingly, a State Normal School Organization was formed on the closing day of the conference. Officers elected for the first year were as follows: —

President — John G. Thompson, Principal, State Normal School, Fitchburg.

Vice-President — John J. Mahoney, Principal, State Normal School, Lowell.

Secretary — Hannah P. Waterman, State Normal School, North Adams.

Treasurer — M. Harriette Bishop, State Normal School, Worcester.

A second important development of the conference was the evident need for greater uniformity in the curriculum offering of the elementary departments of the several State normal schools. As a result, eighteen committees are now at work upon syllabi of minimum essentials in the several subjects of the curriculum in the elementary department. These committees, made up of members of the faculties of the several normal schools, will make their first report at the second annual conference at Bridgewater in September, 1919.

The following resolutions were adopted: —

The members of the several faculties of the normal schools of Massachusetts assembled in conference desire to thank the Commissioner and the Board of Education for the privilege of this meeting. We feel that the general and departmental conferences which we have been permitted to enjoy have been highly successful in promoting a better acquaintance with one another, in stimulating a greater desire for professional growth, and in laying foundations for increased efficiency in the work in which we are engaged. We earnestly hope that these conferences may become a permanent institution.

We wish to express to the principal and the faculty of the Bridgewater Normal School our hearty appreciation of the generous hospitality extended by them, and of the accommodations afforded by their school.

Our thanks are also extended to the speakers, leaders of conferences, and all others who have contributed to the success of the program.

The vital significance of public education to the national welfare has been brought into high relief by the experience of the past year. It is universally agreed that the efficiency of the schools must be kept at the highest possible level if the ultimate success of the great cause for which we are at war is to be insured. An adequate supply of competent teachers is essential to this end. The conference commends the action of the Commission on Emergency and Readjustment of the National Education Association in giving the preparation of teachers an important place upon its war program.

We heartily indorse the movement for the creation of a national department of education under the direction of a secretary of cabinet rank.

We favor a more adequate financial support of the normal schools. In Massachusetts standards are being steadily lowered, in consequence of the inability of the normal schools to attract the necessary quality of expert service for existing salaries. We also favor subsidies from the Federal government, both for the training of teachers and for public education.

We believe that three years is not too long a period to devote to the preparation of teachers for the elementary schools, and that in other departments now requiring less than four years of training the course may well be lengthened.

Although we believe that the individuality of the teachers should be respected, and that many of the distinctive characteristics of the several normal schools are elements of strength in the system, it is our opinion that there should be a greater degree of uniformity in parallel courses of instruction.

We earnestly recommend to the Legislature the introduction of physical education, under the supervision of the Board of Education, into all the public schools of Massachusetts.

We believe that sociology is a vital subject for the normal school curriculum. Social standards are being frankly considered in State and Nation in relation to the establishment of a higher plane of living and

welfare. Students should be acquainted with applied sociology as related to this movement.

We believe that education in our democracy should aim primarily at teaching our people to know and appreciate the privileges and the duties of American citizenship. To this end the bar of illiteracy, which prevents communion with thousands of immigrants in our midst, should be removed. The State and the Nation should lend their resources to the swift accomplishment of this task. In the interest of a more intelligent citizenship the schools themselves should attempt in a more vital and purposive way to make every American boy and girl believe and understand the worth of being free. This means redirected schools, with patriotic citizenship the goal. In this great work the normal school has a large responsibility.

We are of the opinion that the teaching load of instructors in the normal schools should not be of sufficient weight to prevent fresh and thorough preparation; constant professional growth; productive and constructive work which makes for educational leadership; and the performance, outside of the classroom, of the numerous important duties which devolve upon teachers in the particular professional field. Many of the teachers in the normal schools are carrying teaching programs that are excessive.

We believe there should be a closer relationship between the normal schools and the public schools of the State. This should be promoted, in part, through more field work by the instructors in the normal schools, including, for at least a year, systematic follow-up relations with graduates. Each normal school should seek to set standards for the schools which it serves, and should endeavor to assist in the realization of the ideals for which it stands.

We earnestly advocate a real equality of educational opportunity for all the children of the Commonwealth, and the recognition, by the Legislature, of popular education as a State rather than a local function. Among other things this could find expression in the establishment of reasonable standards of professional attainment by teachers in the public schools.

Respectfully submitted,

J. ASBURY PITMAN, *Chairman.*

CORA A. NEWTON.

AMY R. WHITTIER.

ANNA P. SMITH.

WILLIS B. ANTHONY.

2. CONFERENCES OF SUPERINTENDENTS OF SCHOOLS AND HIGH SCHOOL PRINCIPALS.

As a means of promoting closer co-operation between the State normal schools and the school systems of the State, and for the purpose of discussing and, as far as possible, forestalling

the threatened shortage of teachers, a conference was held at each of the State normal schools, with the exception of the Normal Art School, during April and May, 1918. The superintendents and high school principals of the towns and cities in the vicinity of each school were invited to one of these conferences. In this way the entire State was reached, and about 250 superintendents and principals attended.

3. DEPARTMENTS OF INSTRUCTION.

It has been the policy of the State, with reference to its normal schools, to establish a system of teacher-training that would meet the varying needs of the different types of schools and communities in the Commonwealth. This has been done without an undue duplication of equipment and curriculum organization. In addition to the general task of training teachers for the elementary and junior high schools, other somewhat special activities, now recognized as essentials in a State-wide system of teacher-training, have been assigned as specific tasks to the separate schools. Practical arts courses, kindergarten training, public school music, commercial courses, rural life, household arts, and art and drawing are now considered an important part of the State normal school curriculum. As will be seen in the following outline of the departments of the several schools, and by reference to the individual catalogues, the policy of broadening the scope of teacher-training to meet modern needs, through differentiating the work of the normal schools, has been accomplished.

For the information of school authorities in securing teachers, and the guidance of pupils in planning a course in the State normal schools, the following statement of the work now offered is made:—

Elementary Department.—Prepares teachers for elementary schools, including schools containing six grades only, and rural schools of all elementary grades. Two-year curriculum. Maintained by all the normal schools, except the Normal Art School. Framingham and Hyannis devote special attention to the needs of eight-grade or nine-grade rural schools. Fitchburg, Salem and Worcester devote special attention to the needs of schools of six grades only. Lowell offers a three-year curriculum, one year of which is spent in teaching on salary.

Elementary-intermediate Department. — Prepares teachers for all grades of the elementary school, with special reference to the needs of the upper grades. Three-year curriculum. Maintained by Worcester.

Intermediate Department. — Prepares teachers for intermediate schools or junior high schools. Maintained by Bridgewater, Fitchburg, Salem and Worcester. At Bridgewater, Salem and Worcester the curriculum is three years in length. At Fitchburg it is four years in length, one of which must be spent in teaching on salary. At Bridgewater three curriculums have been organized, each three years in length, to prepare for the teaching of different groups of academic subjects in junior high schools.

Primary Department. — Prepares teachers for primary grades. Special attention is given to this department at Bridgewater and North Adams. The curriculum at Bridgewater is three years in length, and includes such kindergarten theory and practice as is adapted to primary grades. The course at North Adams is two years in length.

Kindergarten Department. — Prepares kindergarten teachers, who are also prepared to teach in the first three primary grades. Two-year curriculum. Maintained by Worcester.

Practical Arts Department. — Fitchburg maintains a three-year curriculum for men desiring to teach manual training and various forms of industrial work in junior and senior high schools.

Household Arts Department. — Framingham maintains a three-year curriculum for the teaching of household arts in junior and senior high schools. On account of the special attention given to science, some of the graduates of this school are granted certificates by the Board of Education to teach biology, general science and chemistry in addition to household arts.

Elective Course in Household Arts. — North Adams offers in its regular two-year curriculum special electives for the teaching of household arts in addition to the other work of the elementary schools.

Department for Music Supervisors. — To prepare supervisors of music for elementary and high schools. Lowell maintains a one-year curriculum for students who have taken the two-

year elementary curriculum or have had equivalent preparation.

Commercial Department. — Salem offers a three-year curriculum for the training of commercial subjects in junior and senior high schools. For students now entering the school the curriculum has been lengthened to four years, one of which must be spent in commercial employment under the supervision of the normal school.

Art Departments. — The Massachusetts Normal Art School has eight departments "to train teachers, designers, illustrators, draftsmen and craftsmen for industrial art leadership in the promotion of Massachusetts education, manufactures and social life." The curriculums are four years in length. The public school arts department aims specifically to prepare art teachers for elementary and high schools.

Summer Schools. — Hyannis maintains a five-week summer school at which are offered courses in the theory and practice of education, in the teaching of various elementary and high school subjects, and in school supervision. This work may be counted toward the diploma of the normal school.

Fitchburg maintains a summer session for students desiring to take a part of their regular work during the summer. The practical arts department is in session forty-eight weeks, thus enabling men to complete the three-year curriculum in two school years in addition to three summer terms. Similarly, students in the elementary department are able to complete the two-year curriculum in one regular year and three summer terms.

4. EXTRACTS FROM REPORTS OF PRINCIPALS.

The following brief extracts from the reports of the normal school principals suggest some of the significant activities of the several schools: —

BRIDGEWATER.

Naturally the war has had a dominant influence on the spirit and work of this school, as it has had on other higher institutions of education. A service flag hanging before us with its fifty stars, two of which are golden stars, has had a silent influence that has penetrated all the departments of study.

The following is a general outline of the war activities: —

War Activities.

1. *The Civic Organization of the Normal and Training Departments as Service Units and Red Cross Auxiliaries.* — This included war service work in the making of a very large number of useful articles, Boy and Girl Scout service, campaigns and drives for war funds, addresses by leading war workers, parades, and the turning of the social activities of the school into war channels.

2. *A new impetus to the teaching of patriotism* along three lines: —

(a) A patriotic environment.

(b) The doing of patriotic things in the school and community.

(c) A variety of patriotic exercises, all striving to bring into prominence the American ideals of life.

3. *Modifications in the Curriculum.* — (a) A new purpose in the study of current events.

(b) A vital reorganization of American and European history.

(c) A new meaning to world geography.

(d) The adaptation of the school and home gardens to the direct purpose of a conservation of resources.

(e) A close co-operation of the instruction in cooking, canning and preserving with the actual economic necessities of the dormitory life (1,376 quarts of vegetables and fruits canned; 560 pounds of fruit conserve).

(f) The transformation of manual training activities into lines of war utilities.

The special educational problem of the year has been, and is still, the organization of the three-year course to meet the needs of students preparing for departmental teaching in the junior high school. Dr. Bagley's suggestions in the report of the Carnegie Foundation have been of great value in this work.

Junior High School Curriculum.

1. *First Year.* — A professional foundation in all the great departments of the curriculum; personally conducted observation in the training school, and the beginning of actual participation in the school activities of the human mind, both of the adult and of the child. This year furnishes the opportunity for the student and teachers to discover the departmental capabilities of the student.

2. *Second Year.* — A gradual differentiation of the junior high school subjects and methods; continued participation; introduction of electives.

3. *Third Year.* — A division of the studies into departmental groups; general practice teaching in the training school; departmental apprentice teaching in the upper grades; the psychology and pedagogy of the adolescent youth.

It is expected that a junior high school will be established this spring in town in a new building erected for the purpose. It is hoped that some plan of co-operation may be arranged between the town and the State to allow this department the advantages of a first-hand study of a real junior high school, with such participation as may seem advisable to both parties.

FITCHBURG.

The work of the Fitchburg State Normal School during the past year has been seriously interfered with by the demands of the war. The men students, who had reached nearly one hundred in number, were practically all taken by enlistment or draft, or by essential industries connected with the war. Many of the women students left to enter upon occupations that paid so much larger salary than teaching that they gave up, in some cases reluctantly, the idea of teaching as a sort of missionary service with its high standing its chief reward.

Of course, under these conditions new departures and new developments along old lines were impossible. The members of the faculty have, therefore, turned their attention to the individual normal school student, and with one class — the second year of the junior high school course — the work has been wholly individual work. The lock-step in education has, in theory, been condemned by educational thinkers and writers. The faculty of the Fitchburg Normal School has always felt that the individual should be reached as far as possible as an individual, and not be lost as a member of a class. How far the experiment this year will be a success will be better known at the end of the year, when reports will be received both from students and instructors.

An issue arising out of the war enabled this school, because of its forty-eight weeks of work, to offer in the summer session of eight weeks a new course, an intensive course intended to give those who had not been teaching for years, or who had never taught, — including wives and daughters of officers at Camp Devens, which is situated within 14 miles of Fitchburg, — an opportunity to prepare themselves for teaching. There was no idea that this would give ample preparation, but the thought was that it would be better than no preparation if such persons were called into the teaching service because of the acute shortage of teachers. Not a very large number entered upon this work, probably because other positions were open at a much larger salary; but the course was a success and made up, in numbers, at least, in the summer school, for the loss of men students.

FRAMINGHAM.

The Profession of Home-making.

Throughout the last school year the most significant undertakings and accomplishments at Framingham were in the household arts department. The following quotation from John Bright was made the school motto

for the year: "The nation in every country dwells in the cottage." This motto was dwelt upon and enlarged upon so that its underlying and very condensed philosophy might become a determinative factor in shaping the minds of the students and influencing their attitude with reference to the economic, scientific, artistic and ethical conditions involved in the making of a home. All the year it has been held in the minds of the students that the home is the fundamental institution of civilization, and that whatever gives upward impulse to civilization cannot be of minor importance, but is worthy of the highest efforts. One of the significant undertakings of the year has been to establish in the minds of the students the belief that household arts, with its foundations in science and its fulfilments in art, should be a major subject in every course of study for all girls in elementary, secondary and higher schools.

For the purpose of stimulating discussion and encouraging open-mindedness, we have conducted certain classes on the open-forum plan. Out of these free discussions the following tentative statement seems to have taken form: the duties of the home-maker group themselves about certain activities. These activities may be classified as those connected with providing (1) a home for the family, (2) food for the family, (3) clothing for the family, (4) the care of dependent members of the family, such as children and the aged and the sick, and (5) those activities that have to do with the social and ethical and spiritual relations of the members of the family to each other and to other members of society. Having reached these preliminary conclusions in our open-forum discussions, we followed with special assignment of project-studies to individual students, with general class discussion of each when individual report was made. Some of the special project-subjects were: the house; food and cooking; clothing and household fabrics; care of children; home nursing and emergencies; home and social relationships.

One of our project-studies, covering many cases in a widely scattered field in and about Framingham, resulted in the conclusion that many women little recognize the influence of their responsibilities as purchasing agents, not only upon the health, the comfort, the happiness, the standards of their own families, but also upon the standards of the communities in which they live. To many a woman it would be a revelation to realize that, in her capacity as a purchasing agent, she determines the quantity and quality of the world's commodities; that what she purchases and from where she purchases determine the very conditions of production, as illustrated in the manufacture of sweatshop goods, of adulterated foods and adulterated textiles, and so on. Hence the attempt to make the girl realize that the wise expenditure of the family income is not only an art to be studied, but a vital question in ethics and sociology. By the time the discussions were concluded, some students were of the opinion that the problem of disbursement of money is more complex than that of earning it, and requires as painstaking preparation.

HYANNIS.

A Course in Methods of Teaching Immigrants.

For several years there has been an increasing interest in the matter of immigrant education. With the coming of the war the demand for the training of teachers for this important work has become so insistent that a course was offered in the summer session at Hyannis.

The course was planned and conducted under the joint management of the Department of University Extension of the Board of Education and the Hyannis Normal School. The course consisted of two class periods daily for five days each of five weeks. It was conducted by Charles F. Towne, chief instructor in immigrant education in the Department of University Extension. The class numbered thirty-three persons, and consisted of principals of grammar schools who have been engaged also in night schools where many immigrants attended, teachers and supervisors of special classes, superintendents of schools, with two or three women who are engaged in social betterment work in connection with women's clubs. The average intelligence of the class was high, and the class discussions were correspondingly interesting and helpful. The recitation hours were devoted to lectures and discussions. Many conferences were conducted at other hours, and one day was devoted to a visit to immigration schools which were in session in Fall River. Nearly every member of the class took work in some other class, as psychology, pedagogy, civics or supervision.

This course in immigrant education proved so satisfactory to all concerned that plans have been made for offering in 1919 a similar course and an advanced course in the same line of work.

Junior High School Work.

With the multiplication of junior high schools, the demand for specially trained teachers has increased. To meet this growing demand, and to aid in giving the movement the right pedagogical direction, there has been a gradually increasing number of courses in the summer session which are appropriate to these ends.

The junior high school work of Rochester, N. Y., ranks very high in the opinion of modern educators. Mr. Charles E. Finch, who has had charge of the work since its inception, has for the past three summers given a course in junior high school work in our summer session. This course consists of lectures and discussions upon the purposes, the underlying principles, and the methods appropriate for such work.

Besides this course on the general work of the junior high school, we offered in 1918 the following courses which were appropriate for junior high school teachers: psychology, pedagogy, English, United States history, civics, penmanship, domestic science and art instruction.

The students who take these courses are usually teachers of experience and ability, and are able to do work of a high order.

The number of junior high school teachers who are planning to attend our summer session during the summer of 1919 is greater than ever before, and the program will be the richest that we have ever offered.

LOWELL.

Extension Activities. — *The Lawrence Plan for Education in Citizenship.*

1. *What it is.* — The Lawrence Plan for Education in Citizenship is an effort to discover through careful experiment in what way the public schools may best help to produce an intelligent, serviceable and loyal citizenship in our American democracy.

2. *Origin.* — The idea was conceived by Dr. Ephraim D. Adams of Leland Stanford University during his campaign in Massachusetts as special representative of the National Security League.

3. *Organization.* — The Lawrence Plan, set in action in May, 1918, is organized as follows: —

Board of Directors.

Bernard M. Sheridan.
John J. Mahoney.
Dr. E. D. Adams.
Prof. Paul H. Hanus.
Prof. A. B. Hart.

Supervisory Staff.

Bernard M. Sheridan.
John J. Mahoney.
Blanche A. Cheney.
Leila M. Lamprey.
Alma McCrum.
C. F. Sullivan.

Advisory Committee.

Payson Smith.
Robert M. McElroy.
Henry Harmon Chamberlain.

A number of educational groups are working out this plan together. The school committee of Lawrence has set aside the Oliver School, with 1,400 pupils and 40 teachers. The State normal school at Lowell, with the permission of the State Board of Education, furnishes two instructors to give part-time service in the supervision of this work. The superintendent of the Lawrence schools and the principal of the Lowell Normal School have direct charge of the enterprise. The National Security League provides funds for the extra expense of the plan.

4. *Purpose.* — The Lawrence Plan lays special stress on the necessity for a conscious and purposive education in citizenship, if our American

democracy is to endure. The course in civics emphasizes the principles and ideals of democracy. History is taught, not for facts, but for its values. All the other subjects are to be vitalized and Americanized in similar fashion. It is not enough, however, to socialize the curriculum alone. The recitation and the discipline will be so democratized that every pupil lives the life of the good citizen. Through the activities of the Oliver League for Patriotic Service the pupils have abundant opportunities for the cultivation of such desirable habits and attitudes as personal responsibility, courtesy, self-control, initiative and co-operation.

NORTH ADAMS.

Correspondence Courses.

Registrations for courses by correspondence appear to have been affected by coal conditions, the influenza epidemic, and by demands of various forms of war relief, especially Red Cross work. This conviction is strengthened by the fact that an unusual number of registrations not included in this report came in during December, 1918, and by the fact that discussions from regularly registered students are now received more frequently, and also by resumption of courses by two students who had not submitted lessons since the United States entered actively into the world conflict.

While registrations have previously included public school teachers only, they are open to all instructors of children in the Commonwealth, and during the past year the membership has included Sisters and instructors in parochial schools and academies of five separate parishes. Other registrations received during December give evidence of increasing interest in this phase of educational opportunity.

Total number of registrations, Dec. 1, 1917, to Dec. 1, 1918,	139
Registration according to scholastic preparation:—	
Graduates of normal schools,	36
Undergraduates of normal schools,	77
Graduates of colleges,	1
Graduates of high or preparatory schools only,	25
Registration according to geographical location:—	
West of Connecticut River,	44
East of Connecticut River (teachers from 21 towns),	95
Number of letters to superintendents offering correspondence courses,	149
Single towns,	74
Superintendency unions,	75
Responses from superintendents, giving lists of teachers,	7
West of Connecticut River,	3
East of Connecticut River,	4
Responses from superintendents, inviting oral explanations at teachers' meetings,	16
West of Connecticut River,	1
East of Connecticut River,	15

Short Winter Courses.

In spite of the necessarily increased expense of attendance, six students took advantage of the winter vacation program conducted during February, 1918. Prospects for the course offered during February, 1919, indicate even smaller registration, if any. From the 37 letters sent to superintendents, 26 replies have been received. These indicate that in all except four superintendency unions an attempt will be made to continue sessions throughout the winter, in order to make up time lost during the epidemic of influenza. Letters have been sent to the thirty-four teachers listed from the four districts arranging for winter vacations. Replies have not been received as yet.

Circulating Library for Superintendents.

In response to a request from superintendents, a circulating library of professional books has been organized, catalogued and offered to superintendents of the State. Expressions from individual superintendents indicate that it meets a recognized need. The influenza epidemic and war work have undoubtedly restricted responses. Nine superintendents have made use of thirty-seven books thus far.

Loan Collections.

Loan collections of educative seat work, with explanatory notes concerning their value and methods of using each form of material, have been sent to fourteen individual teachers, and to one superintendent for circulation in his district. More sets in greater variety are in course of preparation. The help to the teacher is immediate and informing, and to the pupils is in the direction of cultivating initiative and self-direction.

SALEM.

Effects of the War.

I. *Upon Membership.*—Until our entrance into the war this school had enjoyed a period of steady and rapid growth, beginning in 1906. The total membership had exceeded four hundred students, including forty or fifty men. In consequence of our participation in the war, all of our men entered some branch of the service or engaged in some occupation indirectly related to the war. The number of women enrolled was also materially diminished, many of them leaving school to engage in remunerative occupations which also attracted prospective students in considerable numbers. Our loss in each of the two years of the war has been approximately 15 per cent. Salem is really a part of the metropolitan district, and a large proportion of our students come from towns and cities which have offered employment in various industries at abnormally high wages. The temptation to accept such positions has been strong. In view of these facts, we have been especially fortunate in

keeping our membership up to the present enrollment. Other factors affecting the attendance have been the high cost of living, the greatly increased cost of transportation both by rail and by trolley, and a substantial reduction in train service, particularly on cross-country lines.

II. *Upon Social Life in the School.* — The social activities of the school have been confined almost entirely to war work of various kinds. Clubs and individual students have entered into the various war activities with earnestness and enthusiasm. They have participated in practically all of the "drives" which have been conducted by the government, the city and the various country-wide organizations. They have given to the prosecution of the war both financial aid and a large amount of time in various forms of personal service. In co-operation with the Red Cross a special aid branch has been formed under whose direction a good many articles of comfort for men in the service and in hospitals have been made and sent to the French front. The art club has undertaken to provide each of our undergraduate as well as graduate men of both normal and training schools who have been in the service with such comforts and conveniences as could be made by students in the art department. The four civics clubs have had charge of the sale of thrift stamps and of bonds. Substantial sums have been realized from the combined efforts of these organizations. In the recent United War Work campaign, after a series of preliminary addresses by representatives of the army and of several organizations engaged in war work, the school exceeded its quota by about 20 per cent. Much of the practical business experience of the students in the commercial department has been gained through the voluntary services that the students have given in connection with the various war work activities in the school and in the city. These forms of service have almost entirely displaced the usual social activities of the school, and the money which would otherwise have been expended for social purposes has been contributed toward the prosecution of the war.

III. *Upon Education and Character.* — Although the war has had an unfavorable influence upon the educational and professional work of the school, there have been large compensations. The students have very generally developed a spirit of service, sacrifice and loyalty that could hardly have been realized under normal conditions. Their interest in current history, in immigrant education, and in the development of a higher type of citizenship has been increased, and their study of these subjects has been more intelligent and practical. Their serious attitude toward their work has balanced much of the loss through distracting influences and interruptions.

WESTFIELD.

Morning Assemblies.

A new and enjoyable feature of the work this year has been the share the students have taken in the morning assemblies. After the devotional exercises a period of ten minutes is given to a program prepared either

by some member of the faculty, by students, or by pupils of the training school.

Representing, as they have done, all ranks and grades of the normal and training schools, these programs have been varied in character; occasionally they have been provided by speakers from outside the school.

It has been felt that students cannot be given responsibility too soon. The development of initiative and personality among them has justified their active participation in this important exercise.

A permanent record of these programs is made. Each day two reporters prepare an account of the program, one of which, when accepted, is copied into a book which, at the end of the year, will contain reports of all assemblies and of all other student activities. This record is known as the "Program Book."

Student Observation of Plant and Animal Life in Designated Areas.

As a part of the work in science each student is assigned a definite area to study during the year. The area is located within convenient walking distance of the student's home or the normal school, and is visited every week during the fall and spring, and as often as practicable during the winter. For the students who commute, the areas are more conveniently located near their homes, and include some woodland and some open fields, with a hillside and a brook, pond or river, if possible.

During the autumn a collection is made of the leaves of the trees and shrubs of the area, and notes are taken of the colors they assume and the approximate time of their fall. The insects of the area are collected and studied with especial reference to their economic relations. All the caterpillars that can be found are caged and fed until they form cocoons or chrysalises, and these are then kept under natural conditions until the adult insects emerge. Notes are kept of the way in which the different insects pass the winter, and of anything that may be obtained with reference to other animals.

In the spring the twigs of the various trees are examined for the arrangement of the buds and the folding of the leaves. Later the blossoms of the trees are studied, and a collection is made of all the flowers that can be found in the area. Observations are made on the location and environment of both plants and animals, and the water is examined for the eggs of frogs and toads and other interesting life.

In this way each student obtains during the year a list of the trees, plants and animals of her area, and learns what is likely to be found on similar areas elsewhere. She learns how and where to search for particular plants and animals. Her powers of observation are developed and strengthened. She gains actual experience in the methods of gathering material for the classroom, and of caring for it properly after it is obtained. Thus knowledge and experience are judiciously combined, and the student gains a confidence which will contribute much toward success.

WORCESTER.

The work of the past year has been considerably interrupted by reason of war conditions, including the coal shortage, the war relief work in which the students had a large part, and the campaigns for funds which demanded attention periodically. At the same time the spirit of the students with regard to their work has never been better, and it can fairly be said that the progress made by them in development and in teaching efficiency has been excellent. As a matter of fact, it would seem to indicate that the attention to these extraordinary demands, the testing of their talents in unusual ways, the necessity of keeping their heads and pursuing their work under abnormal conditions have combined to provide for them a development and growth which are quite equal to the progress made under normal conditions. For these reasons it is felt that the year was a very valuable one in the training of the young women who are to teach in the schools. The class that was graduated in June, 1918, was fully equal to the standard of previous years.

Annual Conference.—The Annual Conference on Rural Education, in March, has now become a fixed event in the normal school, with special attention to the needs and opportunities of the rural school field. This conference has been a valuable feature of our work, and has done a great deal to bring us into closer relations with the territory in which our graduates teach. The 1918 conference followed out the spirit of the wider State movement for the training in the duties of citizenship, and made that its special topic for discussion. A very large attendance was secured by reason of the excellent program presented, and because of the interest in the subject. It was one of the most successful meetings of its kind. The following persons took part in the discussions of the conference:—

Albert Bushnell Hart, Professor of Government, Harvard University.

Lewis S. Mills, Agent, Connecticut State Board of Education.

Harold W. Foght, Specialist in Rural Education, United States Bureau of Education.

Horace G. Brown, Teacher of History and Social Science, State Normal School, Worcester.

John Huston Finley, President of the University and Commissioner of Education of the State of New York.

Thomas Mott Osborne, Lieutenant-Commander, U. S. N. R. F., Commanding Naval Prison, Portsmouth, N. H.

Arthur Gordon Webster, Professor of Physics, Clark University; Member, United States Naval Consulting Board.

It may be added that the addresses of these speakers were printed in the June issue of "Education." This magazine has for the last three years given an entire issue to the publication of the addresses of these conferences.

NORMAL ART SCHOOL.

The Massachusetts Normal Art School has made during the past year very definite progress in the co-ordination and extension of its work in three directions: —

- (a) The reorganization of its courses.
- (b) The extension of the field service of the department.
- (c) Co-operation in special activities brought about by the war.

The department has in larger measure than in any previous year found opportunity for field service in an advisory capacity with superintendents of communities and principals of schools. Five of the members of its faculty have co-operated with the director, not only in this effort, but in furthering certain field surveys which have been made at the request of superintendents and school boards. In each case the purpose of this work has been to further a broader understanding of the opportunities for drawing and handwork in better training for citizenship. Thirteen communities in the Commonwealth have thus been surveyed and reported upon. Copies of the reports have also been prepared for the local authorities.

In war activities the school has taken an honored part. Not only has it seen its sons and daughters enter all branches of the service, where a large number through their sound and unique training for leadership have attained rank and command, but it has accomplished much in co-operative service with local authorities. It has fostered publicity campaigns; its students and faculty have given both time and service in poster, mural and window decoration campaigns for publicity; and it has generously taken part in bond purchases, the sale of war savings stamps, and the community service drives.

Not the least among its activities, since the signing of the armistice, has been its co-operation with the Federal Board for Vocational Education in the rehabilitation of the wounded soldier and sailor, and his adjustment toward self-support in fields of applied art.

State-aided Vocational Education.

The entire descriptive portion of the eighty-first annual report which dealt with vocational education under the supervision of the Board of Education was devoted to a discussion of the Smith-Hughes Act.

A provision of the act requires the Board of Education to make an annual report to the Federal Board for Vocational Education upon the work carried on in the State in schools which share the advantages of the Smith-Hughes funds, and upon the receipts and expenditures of money under the provisions of the act.

The method adopted by the Board for distributing the funds is based upon this principle: Each school conducting approved vocational work shall share proportionately each year in the funds. The ratio of the expenditure for salaries of vocational teachers in a given school to the total expenditure for salaries of vocational teachers throughout the State determines that school's share, provided that the funds shall, so far as possible, be used to relieve the salary burden occasioned by new ventures or increases.

Adoption of this policy necessitates a reporting to the Federal Board upon the entire field of the State-aided vocational school system. The first annual report to the Federal Board has been made covering this entire field. It has been published as Bulletin No. 102, Board of Education. In it there will be found a complete report upon all the last year's work in the Department of Vocational Education.

The special feature of the last year's work in the vocational schools is the work done by the schools because of war needs. This particular feature has been reserved for special discussion here. It is presented for discussion, together with the regular statistical report to be found on pages 224 to 263 of the appended tables, as the Vocational Department's contribution to this report.

The war and its consequent demands have had opposing influences upon the vocational schools; they have been developed and at the same time disorganized. The schools have

been turned to for assistance, which they have rendered, in whole or in part, either by adaptation of old courses or by the development of new courses. The regular faculties and the enrollment of the schools have been depleted and the regular work disorganized.

I. AGRICULTURAL SCHOOLS.

All vocational agricultural schools and departments have done emergency work in assisting county and local efforts for increased food production.

REDUCED ENROLLMENT.

In common with all schools the regular vocational agricultural schools and departments in high schools this year show a diminished enrollment.

Last year productivity returns were filed by 511 boys and 7 girls, or by a total enrollment of 518 pupils. This year it is doubtful if more than 352 pupils will file such returns. The shrinkage has been due, in part, to shattering of the force of instructors by enlistment and draft; in part, to enlistment of pupils in army and navy; in part, to withdrawal to help earn a family living at a time when prices for necessities of life have become distressing; in part, to high wages — wages as high as \$4.50 a day — offered by non-agricultural occupations, and the desire to accumulate a surplus of capital for future farming purposes; in part, to shortage of labor on the home farms of the pupils; and in part, to an unusual restlessness and desire for change.

Enlistment and draft have claimed fathers and sons from farms represented by boys in our agricultural classes, and from neighboring farms. At the same time, the greatest pressure for increased agricultural production has been felt and stoutly responded to. Boys are not only helping at home, but also are helping on other farms. One father has "gone across" for Y. M. C. A. work; and his boy, too young to enlist, is growing all of the crops at home, with a little help secured by exchanging work with a neighbor. Another boy, whose older brothers have gone and whose father is disabled, is caring for a herd of more

than thirty cows, and growing all of the crops, with the aid of younger brothers and a smaller sister.

Last year the pupils earned from farm work \$111,500.87, of which over \$60,000 was received in cash. It is doubtful if an equal ratio of cash will this year be realized. Foreseeing in a measure present conditions, it was everywhere urged last spring that the smaller independent projects be made to give way to utmost participation in big-scale farming enterprises, either at home or on farms of employers. A higher ratio than last year of acreage and animals cared for may thus be realized.

Meantime, instructors are working for the highest educational values possible under the circumstances. For example, boys who are working with their fathers are cost accounting, — not one crop, but all crops; not one line of operations, but all of the operations on their home farms. They are being visited regularly, as usual, and are being stimulated and guided from week to week in their observations and note-taking, in anticipation of future class discussions and written reports.

Incidentally, instructors are rendering valuable service as advisers in the local food production and conservation campaigns.

Ten ordinary years could hardly have accomplished more than a single year has done in extending the spheres of influence and usefulness of the county agricultural schools. True of the other counties, this is most gratifyingly true of Bristol, where progress had been almost discouragingly slow and where, within the past twelve months, it has been almost incredibly rapid.

The following tables present the summary of special work undertaken during the war years: —

War emergency agricultural instruction and supervision, organized as departments.

INCREASED ENROLLMENT.

War emergency departments connected with the high schools of North Adams, Holyoke, Worcester, Wakefield, Saugus, Norwood, North Attleborough, and Falmouth received State aid last year. There were 2,549 persons enrolled in these departments who received instruction and supervision, and who grew agricultural products to the value of \$73,180.71. Of these products, nearly \$30,000 worth were sold or exchanged, and the remainder kept for home use. Departments at these centers have been continued this year, and departments at twelve other centers have been established, namely, at Attleboro, Ayer, Canton, Dedham, Fall River, Framingham, Gloucester, Haverhill, Mansfield, Stoughton, Lunenburg, and Webster. Separate account will be made this year of evening class work done by instructors in charge of departments where day classes are taught.

Classes are seldom held for instruction of groups. The instruction is almost wholly itinerant, — from home to home, or from garden to garden.

Vacant lots, parts of school grounds, and public parks, even a part of a cemetery, have been brought under cultivation. The contention for several years of the Massachusetts Homestead Commission — that idle land in and near the large towns and cities could be made productive at the hands of persons employed during the day in non-agricultural occupations — has in a measure been justified.

Except now and then in a locality where there was strong probability that evening class work would develop into work with day classes, I have everywhere encouraged the employment of experienced local gardeners on part time as instructors and supervisors. A very modest amount of money has thus extended very practical instruction and supervision to a very great number of people, and is resulting in the growing of vast quantities of food products. The ratio of value to enrollment promises to exceed that of last year. Seldom is so great a return realized from such a modest "overhead" outlay.

Of course, present conditions are unusual. There is little market for vacant lots. Real estate men and other landowners are doubtless extending privileges now which can hardly be

counted upon in time of peace. Once the war is over, and food products have become more plentiful and prices lower, we may expect to see cemetery, park, and school yard withdrawn for more accustomed uses. Perhaps hard-working men and women may be inclined to relax a little from the garden labor of these over strenuous nights, holidays, and Sundays.

But the taste for fresh vegetables may be trusted to linger. The busy work for children may be expected to demonstrate its manifold values. The gardening habit will be hard to break and easy to encourage. On the whole, there is not a little probability that the "garden-city" dream of the city planner has been brought a little nearer to realization, and that the tendency towards homes in the open, with at least a little land about them for tillage, has been strengthened, as against the tendency towards living in congested tenement quarters in cities.

On the whole, therefore, it is doubtful if the Board of Education could render a service of greater value per unit of cost than to continue in peace what it has found a way to begin in war.

II. INDUSTRIAL SCHOOLS: FOR MEN AND BOYS.

ENROLLMENT.

Under the conditions the regular enrollment in the regular day schools has been small. The demand for workers and the wages paid have operated to deplete the enrollment seriously in many schools. Exceptionally aggressive advertising campaigns have been undertaken, with the result that school enrollments were kept more nearly normal than they would otherwise have been. The enrollment in woodworking and printing courses has fallen off most seriously. This in general has been counterbalanced by a larger enrollment in the classes for metal trades.

WAR CLASSES.

In order to meet war demands for specially skilled men, evening and day training classes have been established. The war training classes have been exceptionally popular. It has been much easier to secure financial support for evening schools and the special work than in pre-war time.

SPECIAL WORK.

Shipbuilding.

Immediately upon our entrance into the war special co-operative school work was undertaken by the Fore River Shipbuilding Corporation and the Quincy Industrial School.

In this co-operative work the industrial school dealt at first with three trades, — ship fitting, machine-shop work, and shipwrighting. Later there was added work with coppersmiths. A descriptive report of the work and the way it was carried on follows: —

In the yard the machinist does the usual work; the ship fitter deals with all metal work that requires shaping over the gauge, and which is commonly denominated as sheet-metal work; the shipwright checks up from the blue print the assembly work. The co-operative instruction in shipwrighting and ship fitting was essentially technical in its character; the machine-shop work was essentially instructive in its character.

Ship Fitting. — The company provided a space in one of its mold lofts which was turned over to this work. No other work was carried on in this space, so that in the shop the men were segregated. There were two instructors each of whom worked with a group of five or six men. The men were partly helpers, already employed in the yard, and partly new employees sent to the school because they knew something about blue prints or some kind of construction work.

On account of the varying knowledge and qualifications of the men as they came in no fixed period of instruction was determined.

All work was laid out by the instructors. The men were under pay. Conditions in this department were the standard conditions required where the school shop of an industrial school is located under a factory roof.

Shipwrighting. — There was one instructor with four or five regularly assigned men. A shop was constructed for this work in which definite accommodations were provided.

Machine-shop Work. — The Fore River Machine Shop carried the heavy machine work on the main floor of the large shop; the ordinary light machine tools were concentrated in

two galleries of this shop. According to the plan in operation, one instructor was employed for each gallery for the day shift, and one for each gallery for the night shift, — two day shift instructors and two night shift instructors. Each man was assigned for instruction on the particular job at which each man was set. As soon as he became competent on that job he worked at it as long as that particular lot required. If during that time he needed help he went to the instructor to get it. After the first period of instruction he was given the same status as a regular workman of his grade. When the first job was completed he was given another job, and the same process of instruction was gone through with again. Jobs for instruction purpose were picked out by the foreman in consultation with the instructor; the instructor had the final say.

This co-operative day work was continued until January, 1918. At that time the Fore River Company took over instruction on the day work, and the Quincy Industrial School enlarged its evening school trade-extension work for training shipbuilders.

During the period under the direction of the industrial school the co-operative day work was carried on with about 200 different individuals.

Classes for Conscripted Men.

As a result of efforts made to meet the demand for trained men in the army personnel, the following war-training classes were established in State-aided vocational schools. Most of these classes were in continuous operation until the signing of the armistice.

Special war classes for which the Federal Smith-Hughes Act was largely responsible.

Essential Industry Classes.

All of the schools have done special work in offering vocational training, made possible by chapter 206 of the General Acts of 1918, — an act to extend State-aided vocational education during the period of the war. By this act all the advantages of this education were opened to residents of the State over fourteen years of age (sixteen in evening schools) who could profit by the instruction.

Particular mention should be made of the use to which this legislation was put by the Worcester Boys' Trade School. During the usual summer vacation period the school was opened for training recruits from non-essential work for placement in the essential industries of the city. A record of the summer's work shows the largest summer school that Worcester has had.

Regular Army Detachment.

Special mention should be made here of the participation of the Newton Vocational School in the industrial training of enlisted men under the direction of the army's special educational committee.

Through the patriotic zeal of its citizens the city of Newton secured State legislation making it possible for the city government to contract with the war department for training a regular army detachment at the vocational school. Adjustments of the courses for the regular school and regular pupils were made to enable them to render this service. The city constructed barracks, shops, and a mess hall, and there was assigned for training a detachment of 330 men, distributed as follows: —

Automobile repairmen,	90
Machinists,	60
Radio and buzzer operators,	80
Carpenters,	30
Electricians,	50
Acetylene welders,	20

The training of these men was carried out entirely as an enterprise of the city of Newton. This project is suggestive of the possible utilization of State-aided industrial school equipment which might have been made more widely available had the war emergency continued longer and the needs become greater. Newton's spirit in rising to the occasion and the way in which her school authorities discharged these responsibilities are worthy of commendation.

CALLING OUT MEN AND BOYS FROM THE SCHOOLS.

Many of the instructors and directors in State-aided vocational schools left school service for work in connection with the various army or navy war industries and war activities. Some schools had 100 per cent change in the faculty on this account.

This report would not be complete without some reference to this direct personal contribution which members of the faculty, graduates of the schools, and enrolled members of the classes have been glad to render. Together with the manhood and womanhood of the country, drawn from the halls of colleges and schools engaged in general education, the vocational schools of the Commonwealth have sent forth men and women equipped with specially needed skill,—an equipment none the less valuable because it was acquired for other use.

On rather meager and entirely incomplete returns the thirteen industrial schools for boys report entrance of the following list to the active military or naval service during the war. This list is in addition to a much larger list of those employed in important related war activities.

From the faculties,	110
From the graduates,	241
From the undergraduates,	83

The effect of the war on the industrial schools for women and girls is shown in detail in the following table:—

Effect of war on industrial schools for women and girls.

NAME OF SCHOOL.	EFFECT ON ATTENDANCE.		EFFECT ON PUPILS, COURSES, TEACHERS, ETC.					EFFECT ON COMMUNITY CO-OPERATION.			
	1915-16.	1917-18.	Change in type of pupils.	Change in content of courses.	New courses.	Supply of teachers.		Food administration.	Child welfare.	Red Cross.	Other organizations.
Boston Trade School for Girls.	497	306	125 older women for power-machine operating. Better type in day school.	Yes. No shortage; oversupply diverted to survey and general lines of work.		Use of house at 28 High Street for demonstrations.	-	Home nursing classes and first-aid classes have been given rooms for lessons.	Bought Liberty Bonds.

¹ Tentative outline: 72 hours, home nursing; 10 lessons in cooking; 10 lessons in first-aid.

² In September, 1918, this school suspended sessions.

III. HOUSEHOLD ARTS SCHOOLS.

Both day and evening schools of household arts have answered the call of the various organizations engaged in war work. The following is a record of the special activities of the various schools and the special effect of the war upon these schools.

Effect of war on day household arts schools.

NAME OF SCHOOL.	EFFECT ON ATTENDANCE.		EFFECT ON PUPILS, COURSES, TEACHERS, ETC.				EFFECT ON COMMUNITY CO-OPERATION.			
	1915-16. Av. mem- bership.	1917-18. Av. mem- bership.	Change in type of pupils.	Change in content of courses.	New courses.	Supply of teachers.	Food adminis- tration.	Child welfare.	Red Cross.	Other organiza- tions.
Essex County Agricul- tural School.	26	35	Younger pupils.	Cooking: ac- cording to Food Adminis- tration require- ments. Sew- ing: more time given to mending and making over garments.	Home nursing and care of children.	Competition among teachers.	Used building and teacher for extension classes in food conservation. Each girl gave services free in school canning shed, where between 7,000 and 8,000 cans of vegetables and fruits were put up this summer under supervision of teaching staff of school.	Girls assisted in baby weigh- ing campaign at Danvers. Planning a county con- ference to be held at school in November.	-	Sold thrift and war sav- ing stamps. Making "swat clubs" for Camp Devens. Supplied girls as demonstra- tors in can- ning for girls' canning clubs at Danvers and Middle- ton.

NAME OF SCHOOL.	EFFECT ON ATTENDANCE.		EFFECT ON PUPILS, COURSES, TEACHERS, ETC.				EFFECT ON COMMUNITY CO-OPERATION.			
	1915-16.	Av. mem- bership.	Change in type of pupils.	Change in content of courses.	New courses.	Supply of teachers.	Food administra- tion.	Child welfare.	Red Cross.	Other organiza- tions.
Lowell Vocational School.	91.9	59	Pupils younger, im- mature, and ambition not strongly marked.	Emphasized conservation in cooking.	No new courses.	Three teachers released on account of small num- bers.	City food leader and her assistant con- ducted food demonstra- tions several afternoons with com- munity groups. Classes in cookery organ- ized for Greek and Polish women through city food leader and Interna- tional In- stitute.	Morning sew- ing classes were in opera- tion in con- nection with summer playground work.	Alumnae of day school made garments for junior branches of Red Cross.	International Institute used building to carry on classes in English, sew- ing, cooking, and recrea- tional classes in the summer (evenings).
New Bedford Voca- tional School.	46	34	No change in pupils.	No change in content of courses.	Clothing con- servation and feeding of children.	Not affected.	25 demonstra- tions teaching use of sub- stitutes, and 10 demonstra- tions in canning. One building used from July to October as community kitchen for canning under the direction of the city leader.	One girl as- sisted Chil- dren's Aid Society, partly as Portuguese interpreter and partly helping to teach mothers proper care of children.	School acted as auxiliary of Junior Red Cross, and girls worked on garments for Belgians.	Each pupil made flannel shirt for the Smith College Unit, to be used for civilian relief. Swat sticks were made for soldiers camps.

Newton Vocational School.	116.3	108.3	No change in type of pupils.	Sewing: renovating and remodeling emphasized; millinery: special emphasis on using old materials; textiles: wool substitutes; cooking: special emphasis given to food conservation as per food outline of Food Administration. More time given to current events and citizenship. Home nursing course increased from 15 to 38 lessons.	Feeding and care of children.	One cooking teacher left to do extension work for older women.	Followed all rules of Food Administration in cooking classes and at lunch counter.	Had conference with this committee and hope to do practical child welfare work with their co-operation.	Five or six rooms used for Junior Red Cross work of high schools. Met emergency calls for surgical dressings and refugee garments.	Met emergency calls for Y. M. C. A. Gave use of two rooms for special cooking classes carried on by Special Aid Society. Gave use of cooking laboratory for hospital committee for canning vegetables, to be used by soldiers and sailors at Newton Hospital. Gave use of rooms for Girl Scouts carrying on war conservation work. Gave use of laboratory for two extension schools under Mrs. Burnham's direction. First extension school for Middlesex County leaders, and second extension school for Newton city leaders.

												Home nursing classes and first-aid classes have been given rooms for lessons.

GENERALIZATION FROM ABOVE TABLES.

1. Effect on attendance: —
 - (a) Decrease in day schools.
 - (b) Increase in evening schools.
2. Effect on type of pupils in all schools: —
Younger pupils, better type.
3. Effect on courses, or new courses: —
 - (a) Content changed in cooking and dressmaking.
 - (b) New courses in —
 - Canning.
 - Home nursing.
 - Care and feeding of children.
 - Power-machine operating.
 - Machine repairing.
 - Mechanical drawing.
4. Effect on supply of teachers: —
 - (a) None in day schools because of decreased registration.
 - (b) Few evening schools report difficulty in securing local teachers.
5. Effect on community co-operation: —
Both day and evening schools have answered the call of the various organizations engaged in war activities.

CALLING OUT WOMEN AND GIRLS FROM THE SCHOOLS.

In the war emergency, teachers, *alumnæ*, and students of the vocational schools for women and girls have given freely of their time and labor in special service.

Reports from the schools show that they have taken active part in the programs for the conservation of clothing and food. War gardens have been cultivated; lessons in canning have been taught; and canning centers have been maintained where thousands of quarts of fruit and vegetables have been preserved.

Those qualified have served in canteens or as dietitians in hospitals. Others have made surgical dressings, refugee garments, or acted as aids to doctors and nurses. Some have entered the profession of nursing and have been in active war service.

The power-machine departments have trained and placed skilled workers in the factories manufacturing war products.

Teachers have worked untiringly for the exemption boards and all forms of thrift. The purchase of War Savings Stamps and Liberty Bonds has been encouraged. In many instances

practical Americanization work has been joined with the vocational activities of the schools.

Appreciation is due the faithful efforts of the directors and supervisors of these schools. Through this difficult period they have so guided the work of their organizations that they have contributed to the work of the organized war agencies without losing sight of their permanent aim. This is in itself no small accomplishment.

CO-OPERATION WITH THE STATE DEPARTMENT OF HEALTH.

The practical field of service into which vocational household arts schools are winning their way can be well shown in the program launched during the war co-operatively with the Massachusetts Department of Health (Division of Hygiene), and the Child Welfare Committee (Council of Defense) for the conservation of childhood.

In connection with the courses in these schools for the care and nurture of children an outline course of twelve lessons on child welfare has been prepared and placed in the hands of the instructors.

IV. TEACHER-TRAINING.

Perhaps the largest single direct contribution which the vocational school system has rendered in helping to solve the difficult industrial situation created by the war is found in the teacher-training classes for industrial instructors. In the classes organized for teacher-training over 100 instructors were given training which was immediately useful in the industrial concerns in which these men and women were employed. From these classes a total of 38 men were placed as instructors in war industries and with the Shipping Board.

These special teacher-training classes have been conducted at Worcester, Clinton, Boston, Framingham, and Springfield.

V. FEDERAL ASSISTANCE.

Through the development of the war the need and possibility of a larger participation of the Federal government in the educational affairs of the States has been given greater attention. In the field of general education this need is apparent in launch-

ing programs for doing away with adult illiteracy, for Americanization, and for equalizing educational opportunity.

The need for such participation in the special field of vocational and related education was shown emphatically with the entrance of the Nation upon war. The War Labor Policies Board could control the employment of children upon direct war contracts, but in general the control did not adequately reach the boy and girl power of the Nation.

It avails nothing to express an opinion that there should be no falling off in school attendance because of the war. There has been a very large falling off of attendance on account of war. Pupils left school for work. Doubtless in most instances it was necessary and highly important work, but in some instances it was for unnecessary and unimportant work. In all instances the Nation and the State would be stronger and better if along with work there could have been a continuation in school. This should be made possible at the earliest moment by both national and State legislation. Compulsory continuation schools for all young workers should be established by State legislation buttressed by Federal law.

The possibility of such participation has been demonstrated by the successful operation of the Smith-Hughes Act and the stimulating assistance of the Federal Board for Vocational Education.

University Extension.

The war affected profoundly all educational institutions. The Department of University Extension, because of the adjustable nature of its organization, was able without delay to apply its resources to certain needs accentuated by the great conflict.

WORKING WITH THE WAR DEPARTMENT.

When the United States entered the war, the department immediately organized classes in spoken French for soldiers, sailors, and nurses. It published special bulletins on the saving of food and coal. It offered to manufacturers the services of a trained engineer who would give actual demonstrations of coal saving in company engine rooms.

The supply of mechanical draftsmen available was soon found to be inadequate. There were, however, many architectural and structural draftsmen who, because of the decline in building operations, did not have continuous employment. These men needed only a few weeks of intensive instruction to be converted into the kind of draftsmen needed by the Ordnance Office. In May a class of 30 was organized and met three evenings a week at the Massachusetts Normal Art School building in Boston. In June a second class was formed. Of the 53 who enrolled in these classes 42 received certificates and about 25 accepted positions in the War Department.

TEACHING MATHEMATICS TO THE COAST ARTILLERY.

The department arranged with commanders of the forts in Boston Harbor to teach the necessary mathematics to the enlisted men who desired to qualify for commissions. The work was undertaken with the co-operation of the officers at the forts, who, as far as possible, arranged the duties of the men so that they could attend class regularly. As a rule, students in these classes were of marked ability and ambition. Their work was intelligent, enthusiastic, and, until the armistice, regular. They covered the necessary ground in much less than the usual time. Classes of good size were held at Fort

Strong, Fort Warren, Fort Banks, and Fort Heath; over 200 members of these classes later passed their examinations successfully and were given commissions.

TRAINING TEACHERS OF IMMIGRANTS.

A condition revealed by the war is the ignorance of English among large numbers of our foreign-born population. A study based upon available data furnished to the department by the Massachusetts Bureau of Statistics shows that nearly 350,000, or about 10 per cent of the entire population of Massachusetts, cannot read or write English. Of these, 118,000 are unable to read or write any language, and 300,000 are over twenty-one years of age, and, consequently, are not required to attend evening school. Such a percentage of illiteracy is a great hindrance to efficient community action and to economic production. The turnover of foreign-born labor in industry has been enormous. At first it seemed more profitable to discharge a non-English speaking laborer than to waste time in an endeavor to teach him. The result has been a constant flow of green help through certain levels of industry, with its attendant evils of indifferent performance and slow production. But with the coming of the war the decrease in the labor supply became startling, and directors of industry at once awoke to the necessity of retaining their foreign-born laborers and teaching them English.

In many cities and towns evening schools have been conducted with varying degrees of success for many years. During the last four years, however, industrial conditions have been such that the evening school attendance, particularly of the non-English speaking people, has reached a low point. Experience had already shown that the adult immigrants were not attending evening schools, and the prospect of securing attendance in any large way seemed remote, to say the least. It was apparent, therefore, that special methods and new plans of organization must be employed, if illiteracy was to be reduced and English made the common language.

Though the department had indirectly done something toward solving the problem by training teachers through part-time instruction, this method was found to be inadequate as

the situation grew acute. It was seen that the entire time of at least one efficient person was needed. Consequently, an instructor of long experience was engaged, whose sole duty is to study the problem and train teachers of the foreign born.

AMERICANIZATION IN INDUSTRY.

Large numbers of the non-English speaking elements in the State were employed in industrial plants. In other parts of the country employers had for some time experimented with the teaching of English to foreign-born employees in classes organized at the factory. Many of these firms reported that this teaching had materially reduced accidents and compensation costs, had produced a higher percentage of full-time operation, better workmanship, less spoiled product, better co-operation between foremen and employees, better understanding of directions, larger output, and smaller labor turnover. In view of this experience, the Department of University Extension appeared justified in seeking the co-operation of the industries in Massachusetts, believing that the teaching of English to non-English speaking employees would be a great benefit to the individuals themselves, to industry, and, most of all, to the community.

A bulletin entitled "English for American Citizenship" was prepared suggesting plans through which industry could co-operate. The Board of Education made very clear that it did not desire to dictate to employers as to the methods of class organization, but, rather, to outline the various methods that had been found practicable in other parts of the country, and, relying upon the interest of the employer, leave him free to choose the plan that would most satisfactorily meet the conditions of his plant.

The following plans were suggested: —

I. Organization of classes for the teaching of English to non-English speaking workers in the factories, on factory time, taught by teachers furnished by the local public school authorities.

II. Organization of classes for the teaching of English to non-English speaking workers in rooms outside of the factories, in whole or in part on factory time, taught by teachers furnished by the local public school authorities.

III. Organization of classes for the teaching of English to non-English speaking workers in the factories, on factory time, taught by factory employees, others employed by the factory for this service, or others recruited from the community.

IV. Organization of classes for the teaching of English to non-English speaking workers in rooms outside the factory, in whole or in part on factory time, taught by factory employees, others employed by the factory for the service, or others recruited from the community.

V. Organization of classes for teaching English to non-English speaking workers in rooms outside the factories, not on factory time, taught by approved instructors, and all expenses paid by other agencies.

With a view to the establishment of standards in immigrant education, the following suggestions were made: —

I. FOR THE SELECTION AND TRAINING OF TEACHERS.

A. Sources of supply.

1. Teachers already professionally trained.
2. Non-professional teachers recruited from the community.
3. Teachers recruited from factory employees.

B. Qualifications.

1. Ability to speak and understand English.
2. Intelligent devotion to American ideals.
3. Understanding and sympathetic appreciation of the immigrant.
4. Personality adapted to this kind of teaching.
5. Successful experience in teaching immigrants, or completion of the prescribed course in training.
6. Knowledge of the method of teaching English used by the department.

C. Requirements for certificates.

1. Regular attendance at classes for ten periods, or completion of the correspondence course.
2. Full notebook work on course given in class.
3. One book review (1,000 words).
4. One thesis on assigned subject (1,000 words).

An approved list of teachers is kept in the office of the department. Special certificates are awarded to foremen and other employees who take the short course in methods for the purpose of teaching in the plant where they are employed.

II. FOR CLASS ORGANIZATION.

- A. Grouping according to sex. If it is necessary to have a mixed group, there should be a women's section and a men's section.
- B. Grouping according to mental aptitude.

- C. Grouping according to previous education in native language.
- D. Grouping according to knowledge of English.
- E. In instances where necessary, grouping according to nationality, because of Old World animosities that persist even here.

III. FOR CLASSROOM EQUIPMENT.

- A. Adequate lighting facilities.
- B. Seats and desks or tables adjusted to adults.
- C. Blackboard space.
- D. Materials for the use of the teacher in dramatizing the early lessons, such as pictures, objects, etc.

IV. FOR SIZE OF CLASSES.

Numbers in classes may vary according to local conditions. As a rule, the membership should not fall below 10 or exceed 25, though home classes may well contain fewer than 10. The best work will probably be accomplished with a class of 15 or 20 pupils.

V. FOR STANDARDS OF PUPIL ACHIEVEMENT.

- A. *In Speaking.*
 - 1. Ability to speak rudimentary English, in the words of the known vocabulary. In tests questions should relate to daily affairs.
 - 2. Ability to understand conversation on topics of common interest when expressed within the limits of the vocabulary.
 - 3. Ability to read simple paragraphs silently, and reproduce the ideas in own words.
- B. *In Reading.*
 - 1. Ability to write from dictation simple sentences composed of familiar words.
 - 2. Ability to compose a letter.

NOTE. — List of pivotal words may be given and explained orally. The pupils may then build up connected sentences, using the words properly.

VI. FOR APPROVED CLASSES.

The issuing of a certificate by the department to each pupil who successfully completes the required work in a class conducted under the following conditions: —

- A. Approval of teacher by the department.
- B. Approval of the location, organization, and equipment of the class by the department.
- C. Approval of the course of lessons by the department.
 - 1. The standard course will consist of 60 lessons, and will be roughly equivalent to sixty hours of work.

- D. Filing, with the department, of a complete record of the attendance of each pupil and the grade of his work.
 - 1. Attendance will be considered satisfactory if a pupil is present 70 per cent of the time.
 - 2. Satisfactory class work will be indicated by a mark of 75 per cent or above.
- E. Completion of the required examination.

This bulletin has been widely distributed throughout the State. The Massachusetts Public Safety Committee, through its committee of industries, — a subcommittee of its Americanization committee, — was particularly helpful in securing opportunities for trial of the suggested plans. The appeal to the industries of Massachusetts is already bearing fruit. The Waterhead Mills of Lowell organized the first factory class in co-operation with the department. The classes in this plant, which have been in existence since April, 1918, are organized on factory time, and are taught by factory employees. Several other plants in various parts of the State have formed classes in which practically all of the suggested plans are exemplified. It is too early to say which plan will prove to be most satisfactory.

At the present time there is a decided preference on the part of the employers to furnish their own teachers rather than to rely wholly upon the teachers furnished by the local public school. Doubtless this situation will be modified as time permits more complete training for this work.

AMERICANIZATION OF FOREIGN-BORN WOMEN.

Probably no element in the foreign-born community is touched by Americanizing influences less than the non-English speaking woman. The centralizing of foreign groups in our cities and towns reproduces on a small scale bits of Old Europe. The non-English speaking woman, living in this Old World atmosphere, speaking a foreign language, restricted by Old World customs and ideas regarding the status of woman, and burdened with family duties, has been effectually prevented from learning the true meaning of America. In the past the public has relied upon the Americanization of the children to Americanize this Old World element, but this process often proves most disastrous to the welfare of the family. While the

children may learn the new language and the father may become somewhat Americanized by his contact with other men, the mother is not only shut out from participation in these enlightening experiences, but actually loses her proper position in the eyes of her children. For her own sake, therefore, and for the sake of the community, every effort should be made to bring the foreign-born mother under Americanizing influences.

Our native American women have accepted their share in the solution of this problem. Women's clubs are earnestly striving to prepare their members for service in the teaching of English. Hundreds of women have taken the intensive course in methods of teaching English to immigrants offered by the department. Special mention should be made of the work of the Women's Municipal League of Boston. Since July, 1918, this organization has been conducting classes for the teaching of English to foreign-born women. From the outset they have followed the wise policy of employing trained, paid teachers. About 40 classes have been conducted in and around Boston. By arrangement with the school committee of Boston, whenever membership in one of these classes reaches 15 or more the committee takes over the class. The pioneer work done by the League is of special value, as it points out strong and weak methods of approach to the problem of Americanizing foreign-born women.

CO-OPERATING AGENCIES.

On account of the magnitude of the Americanization problem, successful work could not be accomplished without the support of the agencies that were already at work among the immigrants. While many of these agencies were undertaking Americanization work for the first time, others had been working on the problem for a number of years, and had gained a large amount of valuable experience. That there may be no duplication of effort, the Federal-State Program, worked out by the department, offers a plan showing how these agencies may co-operate with each other, with the public schools, with the Board of Education, with the Bureau of Immigration, and with the Free Public Library Commission. The plans there set forth have been well received, and steps have been taken to put into operation many of the suggestions made.

EXTENSION OF PUBLIC SCHOOL SERVICE.

To meet the conditions produced in industry and in the households of the foreign born, a plan embracing all Americanization agencies was found to be necessary. It was felt that the teaching of English should be the starting point of all Americanization activities. Consequently the problem belonged to the public schools.

As this belief harmonized with the activities of the Federal Bureau of Education, a plan was evolved called the Federal-State Program for Immigrant Education. The outline of this program is given in a bulletin of the department. The purpose is to co-ordinate the activities of the State agencies interested in immigrant education, of local public school systems, and of all other private and semi-public agencies interested in the work. Of special relevance is the section outlining the program, which is as follows:—

HOW PUBLIC SCHOOLS MAY HELP.

1. Appoint a local director of immigrant education and Americanization.
2. Appoint teachers especially qualified and trained for teaching English to immigrants.
3. Improve present evening school facilities by —
 - (a) Installing seats and desks adjusted to adults.
 - (b) Providing adequate lighting for rooms used in the evening.
 - (c) Providing lesson materials adapted to needs of adult pupils.
4. Extend public school facilities by —
 - (a) Furnishing teachers for classes of 15 or 25 persons wherever foreign-born people live, work, or congregate in numbers.
 - (b) Co-operating with industries in the organization of classes in factories, stores, etc., where practicable.
 - (c) Co-operating with women's clubs in the organization of classes among foreign-born women.
 - (d) Co-operating with other responsible local agencies in the organization of classes.
 - (e) Supervising instruction given under the direction of volunteer agencies or by private enterprises.
 - (f) Enlisting the support of all civic and educational agencies in the effort to make English the language of Massachusetts.
 - (g) Advertising classes in English and citizenship.
5. Superintendents of schools are urged to secure names and addresses of foreign-born persons who need instruction in English, and to send a personal letter to each, inviting him to join the class.

It is gratifying to report that the plan outlined has been accepted by many school committees of the State, and that classes are already being taught by public school teachers in factories, foreign districts, etc.

In following out this plan in the public schools it is important that a director of immigrant education and Americanization be appointed in each municipality. At the present time there is a tendency on the part of many municipalities to agree to the program and then to wait passively for some group of foreign-speaking people to present themselves for instruction. Unfortunately, this plan of procedure does not bring results, because many of the foreign born are not particularly desirous of learning English. While these people do not absolutely refuse to learn, natural inertia makes them somewhat slow to respond. In order to make the campaign a success — and it should be borne in mind that for the welfare of the community it must be a success — some one individual with power to act must have an enthusiastic and abiding interest in Americanization.

One of the main duties that the local director of immigrant education would have to perform would be to interest the foreign-born people themselves in the task of learning English. Lynn has the distinction of being the first city in the State to assign definitely the task to a supervisor of immigrant education.

THE TRAINING OF TEACHERS.

Perhaps the most important contribution of the Department of University Extension to the work of immigrant education has been made through its courses in methods of teaching English to immigrants. One of the great reasons for the failures of evening school work in the past was found in inadequate methods of instruction. Before the war little attention was given to this particular branch of pedagogy. Many devices, some of which were good, had been employed, but no complete method adapted to the needs of adults was available for public use. After a study of the devices and methods already in use, the department has now organized a comprehensive-direct method that includes the best devices and methods that have so far appeared. Since last March intensive training courses in this method have been given to prospective

teachers of immigrants. Those who have taken this course have come from different parts of the State, and a good beginning has already been made toward the establishment of an effective body of trained teachers. More than 1,300 persons took this course between March, 1918, and January, 1919.

A STANDARD COURSE OF LESSONS.

Besides attempting to standardize the method of teaching, the department has been preparing a standard course of lessons in English for foreign-born men and women. There were several reasons for doing this. While there are at present many textbooks for the teaching of English to the foreign born, all of which have points of excellence, this branch of education is still so uncertain in its methods and standards that the department felt justified in contributing its experience and theory to the discussion. It was felt that there was room for a set of lessons which would emphasize a direct device and practical method of teaching, rather than an elaboration of the technical details of English. A further reason for the preparation of these lessons lay in the fact that many teachers must of necessity be relatively untrained and in need of the right kind of teaching material.

These standard lessons have been developed in two series, — a series for immigrant women with home interests, and a second series for immigrant men and women in industry. In each series there are 60 lessons, roughly equivalent to sixty hours of work. In addition there are certain supplementary lessons dealing with topics of special interest. While the chief aim of these lessons is the teaching of English, and the first emphasis is placed upon acquiring a speaking knowledge of the language, a definite attempt has been made, through the selection of lesson material, to inform newcomers about the customs and standards of American life and the fundamental principles of democracy. It is believed that this end has been accomplished without resorting to preaching or moralizing. As soon as these lessons are available for public use, an added step toward the standardization of immigrant education will have been taken.

SUMMER COURSE IN METHODS OF TEACHING ENGLISH TO IMMIGRANTS, GIVEN AT THE STATE NORMAL SCHOOL, HYANNIS.

A special feature of the teacher-training work was the course in methods given in co-operation with the State normal school at Hyannis, from July 9 to Aug. 9, 1918. The course included not only a study of methods of teaching English to immigrants, but also covered the important questions of evening school organization, co-operation with industries, factory classes, home classes, community organization, and a study of the agencies already at work in the field of immigrant education. Thirty-three people registered for the course and received certificates. Twenty-four cities and towns of the State were represented.

It is gratifying that a large majority of these students have already made valuable contributions to the cause of immigrant education in the communities in which they are working. One has been appointed supervisor of immigrant education in a large city of the State. To two others has been assigned the special duty of organizing classes in English among the non-English speaking residents of their city. Many others are actively employed in teaching factory and evening classes, or are engaged in social work among immigrants. All have materially aided in spreading knowledge of the approved method of teaching.

WORK IN FALL RIVER.

During the summer of 1918, as the result of the efforts of the assistant superintendent of schools, a group of Fall River teachers was trained in methods of teaching English to the foreign born by the department instructor in immigrant education. Following this training twelve classes of foreign-born women were conducted during the summer. For the most part, these classes met upon certain afternoons of each week at a time most convenient for the women. The places of meeting were in each case public school buildings selected because of their convenient location. At the end of the summer the department issued 73 certificates to women who successfully completed the course.

From the foregoing it will be seen that the work of the department has been largely preparatory. It was necessary first

to secure the co-operation of the public schools, of employers, and of foreign-born leaders. Securing the co-operation of these in a large measure constitutes an important result of the first nine months' work. The influenza epidemic, the uncertainties traceable to the signing of the armistice, and the period of industrial readjustment upon which the country is now entering have all tended to complicate the problem. Many difficulties have already been removed, however, and the future gives promise of more rapid progress.

IMPROVEMENT OF INSTRUCTION MATERIAL.

Extension education must be kept dynamic and elastic. Courses must be revised to meet changing conditions. The department has found the work of revision relatively easy and inexpensive because most of the courses are mimeographed and no great loss is incurred when an edition is discarded.

During the last two years it has been the policy of the department to improve and expand courses already in use. Revision includes not only the enrichment of material, but the division of long courses into several parts. During the past year the improvement of courses has been as follows:—

Elementary Applied Arithmetic.

The problem of the writer of extension courses is to present subjects usually taught to children in a tone and manner which will not appear patronizing to grown men and women. Many persons long past school age cannot handle effectively the familiar operations of multiplication, division, and subtraction. They cannot add common fractions or place correctly the decimal point.

A correspondence course in the fundamental processes of arithmetic meets the requirements of persons whose knowledge of such matters needs to be refreshed. Elementary Applied Arithmetic is designed for this purpose. It consists of eight lessons, going no further than percentage. Mechanics, housekeepers, storekeepers, clerks, and others are furnished with problems suited to their occupations. Elementary Applied Arithmetic is also an admirable preparation for the course in

Practical Applied Mathematics, and is used by students for this purpose.

There would undoubtedly be a large demand for classes in this subject if the department were permitted to form them. It is not expected that extension courses will be offered which conflict with the offering of the evening schools.

Elementary Applied Arithmetic has been open for registration of students only a few months. This accounts for the relatively small number enrolled. (See page 266.)

Lowell Institute Preparatory Courses.

The purpose of the Lowell Institute Free Evening School for Industrial Foremen is to bring the systematic study of Applied Science within reach of men engaged in industrial pursuits, who desire to fit themselves for more responsible positions, but who are unable to attend a technical college during the day. This school offers a mechanical course, an electrical course, and a building course, each extending over a period of two years. The admission requirements for the institute course are fairly rigid; and special preparation for the examination is usually necessary.

At this point the Department of University Extension is prepared to help men who desire to enter the Institute School. Through the co-operation of the agent for industrial work, of the director of the Institute School, and of the chief instructor in mathematics, a course has been arranged which may be taken by correspondence or in class. It prepares students directly for the admission examinations. The nominal charge of \$5 for books and other equipment is small compared with the charges ordinarily made for similar courses. Considering the relatively limited number of men likely to be interested in this highly specialized course, the enrollment as shown on the statistical tables on page 267 indicates how much it is needed.

Advertising.

The charge for the original course in this subject was \$6. This amount was so much greater than the charge for other courses offered by the department that students did not apply

for it. Furthermore, it dealt principally with only one kind of advertising. A need was felt, not only for a less expensive course, but for a course which in its application would suit a larger number of students.

To meet this need, a course of twelve lessons was written by a practical advertising man, who intended to give the student the most important helps gathered from his long experience in advertising. It contains no superfluous matter; the first paragraph gives the student ideas which can be put into actual use. Another vital feature is constant reference to current magazines and newspapers. The problems set for the student deal with either the selection or the preparation of effective advertisements.

Highway Construction and Maintenance.

With the coming of automobiles, road construction became more scientific. In Massachusetts large numbers of men are constantly employed in maintaining State highways. Beginners in this work are naturally inexperienced. Attendance at technical schools, where courses in highway engineering would be available, is impossible for most of these men. But a practical course conducted by a highway expert can help much.

Since its establishment the department has offered a course in Highway Engineering. The original course proved too academic for the men engaged in work on highways. The need of correspondence instruction which would give something usable in the first lesson soon became evident. In the improved form of the course this need has been met. The first lesson provides material of daily use to men actually building roads.

During the war many roads fell into disrepair through lack of labor and materials. With the coming of peace and the release of materials road improvement will presumably again become normal. In its new form the course in Highway Construction and Maintenance will be of service in training the men needed for this work.

Accounting.

Previous to the current year, the department offered three courses in accounting. Except in the most general way each course was unrelated to the other. As there is considerable

demand for accounting courses, and the students enrolled are uniformly earnest and ambitious, it is evident that an organic group of courses — the more elementary growing into the more advanced — should be arranged.

A new group of courses is being prepared which will be named, consecutively, Elementary Accounting, Principles of Accounting, Certified Public Accounting Problems, and Industrial Accounting. These courses will be especially useful to persons desiring to prepare for the certified public accountant examinations; for example, the course in Certified Public Accounting Problems is composed almost entirely of problems set in the certified public accountant examinations of Massachusetts and other States.

Miscellaneous Changes in Instruction Material.

Other courses which have been improved, supplemented, or added to the program of the department are the following: Civic Biology, Freehand Drawing, Drawing for Mechanics, Exterior Home Decoration, Heating and Lighting for Janitors, Commercial Correspondence, Elementary United States History and Government, Elements of Economics, English for New Americans.

PUBLICATIONS.

In addition to the four bulletins regularly devoted to the annual report and the announcement of courses, the department issued in January, 1918, a bulletin entitled "Coal Thrift." This pamphlet was designed to be of practical assistance to householders in the operation of stoves and heaters. The shortage of fuel and the severity of the weather made its publication timely. Five thousand copies were printed; 4,500 have been distributed.

The July issue of the bulletin was entitled "English for American Citizenship," and outlined plans through which industry could assist in promoting good citizenship. (See page 137 for a résumé of these plans.)

Besides its regular bulletins, the department is about to publish its course on Safety Engineering, which was described in the eighty-first annual report of the Board. It is the purpose of the administrative staff of the department eventually to offer all its courses in printed form. This process will extend over a

number of years in order to distribute the expense. The advantage of printed over mimeographed course material is obviously great. When issued in proper dress, such material is more attractive and readable; illustrations may also be introduced effectively.

For a considerable time a need has been felt for short, attractive descriptions of our courses. To meet this need the department has prepared leaflets containing explanations of the objects of the various courses and outlines of the leading features. By means of these leaflets a prospective student may learn at a glance whether the course is suited to his needs. These leaflets are essentially economical because they can be used instead of dictated letters.

LOCAL COUNSELLORS FOR EXTENSION STUDENTS.

In several towns of the Commonwealth an experiment is being tried which promises to result in sound publicity for correspondence courses and extension classes. Local superintendents of schools are in a position to know the educational needs of their communities. They are also in a position to understand the significance of the courses offered by the department, and to give effective advice to prospective students.

The practice of enrolling students by mail is haphazard and uncertain. Under this method a student is likely to misconceive the purpose of the course, and to find out too late that he has not made a suitable selection. In some cases this makes necessary a second selection, also by mail, which may be no more satisfactory than the first selection. Before enrolling in a course, personal counsel is needed. The superintendent of schools is the logical person to give this counsel.

Several superintendents have agreed to act as advisers, or counsellors, for extension students residing in their communities. Each counsellor is provided with all possible descriptive matter and with specimens of courses which are in greatest demand. He is also kept informed of the activities and policies of the department. The experiment is too recent to make possible a sound appraisal of the results, but the relations thus far established have been cordial, sympathetic, and mutually beneficial.

ATTITUDE OF STUDENTS UPON COMPLETION OF COURSES.

Most valuable suggestions for the improvement of study material and methods of giving courses come from the students. If the courses of the department meet the needs of students with a fair degree of exactness, it is because students' suggestions and criticisms are given weight when courses are revised. As a student completes a course he is sent a form on which he is requested to state his view of the course he is completing. When these forms are received at the office they are filed as "favorable," "unfavorable," or "neutral," according to the student's attitude toward the course. Since the system of classification was installed in 1917, 768 students' criticisms have been filed. Of these, 72 have been classified as neutral; 16 as unfavorable; 680 as favorable. During the same period 1,030 have completed courses. These figures apply to correspondence students only.

During recent months the same system has been applied to classes. In that time 1,003 class students have completed courses. Of these students, 21 sent neutral criticisms, 22 unfavorable, and 178 favorable. It should be noticed that a far larger proportion of those who complete courses by correspondence take the trouble to send in suggestions than is the case among class students. The probable reason is that class students are required to pay postage when they send in their blanks, whereas students in correspondence courses may mail them with their last assignments.

CLASS INSTRUCTION AND ATTENDANCE.

Attendance in extension classes is not only important in itself, but is an indication of other factors in successful work, such as comfortable, attractive surroundings, suitable class equipment, fitness of the course to the daily needs of students, and strong, interesting instruction. In appraising attendance in extension classes, however, results in day school attendance should not be allowed to prejudice the mind. In many ways the two forms of education are not to be compared. In day schools attendance is compulsory by law; there are officers whose business it is to follow up absence, and there are well-

defined penalties which not only reach the children, but their parents as well, in cases of willful and unnecessary absence from school. The pupils of day schools are mostly young people whose chief serious occupation is going to school.

Extension students, on the other hand, pursue their work solely because they themselves desire to do so; there is no legal

FIG. 1. — Attendance record of extension class having *highest* percentage of attendance during year of 1917-18.

penalty for failure. Furthermore, they are breadwinners; education is an additional activity which, though beneficial, may be interrupted without disturbing the main business of life. It is to be expected, therefore, that attendance upon extension classes will be normally more irregular than attendance at day school, and no comparison of percentages should be made without bearing in mind the difference in conditions.

Still the maintenance of good attendance at classes is a matter of great importance to the department, though its

methods of securing regularity have to be different from those employed in the day schools. No reports sent to the department are more carefully and solicitously studied than those on class attendance. Instructors are not only urged to report

FIG. 2. — Attendance record of extension class having *lowest* percentage of attendance during year of 1917-18. This class was held in an industrial plant. Note absences, presumably caused by war work.

absences from class, but to find out and report causes of prolonged absences and withdrawals from class. Reports of instructors and special inquiries sent by the department frequently point the way to an arrangement whereby the student may complete his work by correspondence if his continuance in class is impossible.

After the class has completed its courses the attendance records of each class are assorted, and given graphical form as shown in Figs. 1 and 2.

These figures represent the variation of percentage of attendance. Figs. 1 and 2 represent, respectively, the typical high and low percentages of attendance in last year's classes. The black bars represent attendance. Continuous black bars represent perfect attendance. Breaks in the bars and circles indicate absences. Crosses indicate that the student enrolled but never attended the classes. Initials to the left represent the individual students. Figures along the top represent the number of class meetings. The shaded area indicates the total amount of attendance. Each figure is designed to show at a glance not only the attendance record of each individual, but the general character of attendance in the class as a whole.

Fig. 3 is a graphical representation of the attendance in 64 classes held during the last year. The figure shows several things. The numbers at the left represent the total number of pupils in 64 classes. As all classes did not have the same number of meetings it was necessary to construct a composite figure based on attendance during the first quarter, second quarter, third quarter, and fourth quarter of each course. The shaded portions of the figure indicate attendance at class. The area in lighter shading shows the proportion of the class membership who received certificates on completing the course. The hatched area covers the occasional absences. The white area indicates the number of those who enrolled but "dropped out." In counting the "dropped out," a student was considered "dropped out" if, after three consecutive absences, he did not return to class. The stippled bar indicates those who enrolled but never attended.

It is not always practicable to make just comparisons in results between extension courses. This is because attendant circumstances vary widely, and attendant circumstances vitally affect results. It is rarely possible to find a common denominator on which conclusions may be based.

All studies of extension classes tend to establish some relation of instruction to attendance. It is almost axiomatic that the instructor whose treatment of his subject is suited to the needs of his class, whose manner is cordial without being

familiar, whose prevailing motive in teaching is service, will draw students to him. On the other hand, the instructor whose interest in his subject transcends his interest in human

COMPOSITE ATTENDANCE DATA OF 64 EXTENSION CLASSES

FIG. 3. — Attendance in 64 classes, aggregating 1,750 students. Black areas denote total attendance, the section below white line indicating the proportion of the total membership who received certificates. Legends in other areas are self-explanatory. Curves were obtained by determining attendance during the first quarter ($\frac{1}{4}$), second quarter ($\frac{2}{4}$), third quarter ($\frac{3}{4}$), and last quarter of each course. This method has to be used because courses vary in length.

beings, whose manner is patronizing or cold, whose knowledge of his subject is faulty, or whose treatment thereof is unsuited to present needs, will fail to retain the interest and confidence of his class. The character of his instruction is sure to be one depressing factor in attendance.

But the instructor's attitude toward his work and students is

not the only factor in good attendance. The background of the class, or, rather, the attitude of the community or organization from which the class is drawn, has a large bearing on attendance. This is shown in Figs. 4 and 5.

Here we have two classes in the same subject, taught by the same instructor. It is fair to assume that the instructor, whose

FIG. 4. — Attendance record of an extension class in which the attitude of students was earnest and especially favorable to good results.

reputation for interest and skill in teaching is high, approached both classes without appreciable difference of good will; yet results differ widely. In one class the percentage of attendance was 87 per cent and in the other 51 per cent. The factor causing this wide difference could not have been the weather, for the classes were held in the same season; could not have been the place of meeting, because both classes were held in a central location in comfortable quarters; could not have been the instructor, for the classes were taught by the same person; could not have

been inequality of preparation, for both classes were composed of persons having similar, if not identical, occupations. The difference in results sprang primarily from a difference in the attitude of the members.

To return for a moment to Figs. 1 and 2. Fig. 1 represents

FIG. 5.— Attendance record of an extension class enrolled in the same subject under the same instructor as the class represented in Fig. 4. Poor attendance record reflects attitude of class toward study.

the record of attendance in the banner class of last year. Voluntary classes do not often secure 94 per cent attendance. But it shows what may be expected when the personnel of a class is homogeneous, interested in the subject, not afraid to work, and is led by an instructor whose preparation for his work, whose personality, and whose methods of procedure are close to 100 per cent effective.

PART III.

STATISTICS.

DIVISION 1. — GENERAL EDUCATION.

The following lists and tables are included in this division:—

- I. Summary of Statistics of the Public Schools—Day, Evening, and Vacation—for the School Year 1917-18.
- II. Statistics of State Normal Schools—Number of Teachers and Students.
- III. List of Superintendents of Schools, with Towns and Cities in their Superintendencies.
- IV. Statistics of State-aided Superintendency Unions.
- V. Data regarding Certification of Superintendents of Schools.
- VI. Data regarding High School Principalships.
- VII. Massachusetts High Schools approved by the Board of Education for the Privilege of Certification to State Normal Schools.
- VIII. Towns of Less than 500 Families and State Aid for High School Education therein.
- IX. County Training Schools.
- X. Statistics of Schools in State Institutions.
- XI. Massachusetts School Fund.
- XII. Teachers' Registration Bureau.
- XIII. Financial Statement of Board of Education.

I. SUMMARY OF STATISTICS OF THE PUBLIC SCHOOLS — DAY, EVENING, AND VACATION — FOR THE SCHOOL YEAR 1917-18.

Pages i to cxcix of this report contain data for each town and city and totals for the State.

Pages cc and cci contain a table giving a comparison of certain State totals for 1917-18 with the corresponding data for 1907-08, and showing the percentage of increase and decrease for a period of ten years.

Statistics for State-aided vocational education are not included in the school returns, and consequently are not included in this summary.

A. — Data for the School Year ending June 30, 1918.

I. REGISTRATION OF MINORS, APRIL 1, 1918.

1. Persons between the ages of five and seven years: —	
(a) In registration of minors,	120,383
(b) In public school membership,	79,863
(c) In private school membership,	20,817
2. Persons between the ages of seven and fourteen years: —	
(a) In registration of minors,	464,621
(b) In public school membership,	381,249
(c) In private school membership,	87,584
3. Persons between the ages of fourteen and sixteen years: —	
(a) In registration of minors,	120,131
(b) In public school membership,	74,525
(c) In private school membership,	11,966
4. Illiterate minors between sixteen and twenty-one years: —	
(a) In registration of minors,	11,504
(b) Illiterate minors receiving employment certificates, year ending Aug. 31, 1917,	7,189

II. NUMBER OF DAYS THE PUBLIC DAY SCHOOLS HAVE BEEN IN SESSION.

1. Average number of days the public day schools have been in session,	176 ¹
--	------------------

¹ Obtained by dividing the aggregate days of attendance by the total average attendance.

III. PUBLIC DAY SCHOOL ENROLLMENT AND ATTENDANCE DATA.

1. Total enrollment of pupils of all ages,	607,805
Increase,	5,970
2. Average membership of pupils,	547,288
Increase,	2,905
3. Aggregate days of attendance of pupils,	89,345,566
4. Average daily attendance,	506,474
Decrease,	2,709

IV. PUBLIC DAY SCHOOL TEACHERS.

1. Number of teaching positions in public day schools — kindergarten, elementary, and high — Jan. 1, 1918: —	
(a) Principals,	664
(b) Supervisors,	786
Full time,	326
Part time,	460
(c) Teachers,	18,159
Full time,	17,970
Part time,	189
(d) Total,	19,609

V. PUBLIC DAY HIGH SCHOOLS.

1. Number of public high schools,	253 ¹
2. Number of principals and teachers,	3,788
3. Pupils enrolled,	85,717
Decrease,	1,988
4. Aggregate days of attendance,	12,982,081
5. Median number of days the high schools have been in session,	182
6. Average membership of pupils,	76,376
Decrease,	3,740
7. Expenditure for support, exclusive of general control: —	
(a) Amount,	\$6,402,337 64
(b) Cost per pupil in average membership,	\$83 83
8. Expenditure for salaries and expenses of principals and supervisors, and for salaries of teachers: —	
(a) Amount,	\$4,727,977 29
(b) Cost per pupil in average membership,	\$61 90
9. Expenditure for textbooks: —	
(a) Amount,	\$146,180 49
(b) Cost per pupil in average membership,	\$1 91

¹ High schools not "under the order and superintendence of the town authorities" are not now counted as public high schools.

VI. PUBLIC DAY ELEMENTARY SCHOOLS.

1. Number of principals and teachers,	15,063
2. Pupils enrolled,	522,088
Increase,	7,958
3. Aggregate days of attendance,	76,363,485
4. Median number of days the elementary schools have been in session,	172
5. Average membership of pupils,	470,912
Increase,	6,645
6. Expenditure for support, exclusive of general control:—	
(a) Amount,	\$18,532,108 86
(b) Cost per pupil in average membership,	\$39 35
7. Expenditure for salaries and expenses of principals and supervisors, and for salaries of teachers:—	
(a) Amount,	\$12,826,496 76
(b) Cost per pupil in average membership,	\$27 24
8. Expenditure for textbooks:—	
(a) Amount,	\$269,178 58
(b) Cost per pupil in average membership,	\$0 57

VII. PUBLIC EVENING SCHOOLS FOR THE YEAR ENDING JUNE 30, 1918.

1. Evening elementary schools:—	
(a) Number of cities and towns maintaining eve- ning elementary schools,	80 ¹
(b) Number of teachers,	1,205
(c) Number of pupils enrolled,	26,776
(d) Expenditure for support, exclusive of general control,	\$192,888 12
2. Evening high schools:—	
(a) Number of cities and towns maintaining eve- ning high schools,	47 ¹
(b) Number of teachers,	653
(c) Number of pupils enrolled,	19,147
(d) Expenditure for support, exclusive of general control,	\$161,024 00

VIII. PUBLIC VACATION SCHOOLS FOR THE YEAR ENDING JUNE 30, 1918.

1. Number of cities and towns maintaining vacation schools,	28
2. Number of teachers,	380
3. Number of pupils enrolled,	10,668
4. Expenditure for support, exclusive of general control,	\$40,418 66

¹ In addition, two towns sent their pupils to evening elementary schools of other cities or towns; also three cities and towns sent their pupils to evening high schools.

IX. COST OF ALL THE PUBLIC SCHOOLS — DAY, EVENING, AND VACATION — FOR THE SCHOOL YEAR ENDING JUNE 30, 1918.

Support.

1. Total expenditure for support,	\$26,670,875 44
Increase,	\$2,120,459 04
This expenditure is distributed among the following classes indicated in the statutory definition of support:—	
(a) General control,	\$1,115,784 43
Increase,	\$43,806 25
(b) Salaries and expenses of super- visors, principals and teach- ers,	17,853,534 52
Increase,	\$1,047,810 37
(c) Textbooks,	421,155 09
Decrease,	\$31,052 30
(d) Stationery, supplies and other ex- penses of instruction,	821,807 97
Increase,	\$44,002 31
(e) Janitor service,	1,783,412 96
Increase,	\$119,801 05
(f) Fuel,	1,757,558 92
Increase,	\$603,522 43
(g) Miscellaneous expenses of opera- tion,	341,731 37
Decrease,	\$3,768 21
(h) Repairs, replacement and upkeep,	1,218,798 83
Increase,	\$188,146 79
(i) Libraries,	7,411 75
Increase,	\$2,029 85
(j) Promotion of health,	215,854 55
Increase,	\$15,919 24
(k) Transportation,	582,681 17
Increase,	\$43,551 76
(l) Tuition,	250,841 85
Increase,	\$11,660 00
(m) Miscellaneous,	300,302 03
Increase,	\$35,029 50

Outlay.

2. Total expenditure for outlay,	\$3,929,212 86
Decrease,	\$202,370 30
(a) New grounds, buildings and alter- ations,	\$3,643,724 49
(b) New equipment,	285,488 37

Support and Outlay.

3. Total expenditure from all sources for support and outlay,	\$30,600,088 30
Increase,	\$1,918,088 74

Cost per Child for the School Year 1917-18.

4. Cost for support for each pupil in the average membership,	\$48 73
Increase,	\$3 63
5. Cost for support and outlay for each pupil in the average membership,	\$55 91
Increase,	\$3 22

*B. — Data for the Last Preceding Town or City Fiscal Year, which in All Towns and Nearly All Cities ended Dec. 31, 1917.**I. COST OF SUPPORT OF ALL PUBLIC SCHOOLS — DAY, EVENING, AND VACATION.*

1. Total expenditure for support,	\$25,625,307 44
Increase,	\$1,816,164 43
(a) Amount raised by local taxation and expended for support,	\$24,736,002 42
Increase,	\$1,735,599 45
(b) Amount derived from sources other than local taxation or its equivalent and expended for support,	\$889,305 02
Increase,	\$80,564 98

Cost per Child for the Last Preceding Town or City Fiscal Year ending in Most Cases Dec. 31, 1917.

2. Local taxation cost for support for each child in the average membership, ¹	\$45 20
Increase,	\$2 95
3. Total cost for support for each child in the average membership, ¹	\$46 82
Increase,	\$3 08
4. Percentage of the total valuation as of April 1, 1917, raised by taxation and expended for support of public schools,	.005 $\frac{45}{100}$ or \$5.45 per \$1,000
Increase,	.000 $\frac{82}{100}$ or \$0.82 per \$1,000

¹ The average membership, however, is for the school year ending June 30, 1918.

C. — Employment Certificates and Home Permits issued to Persons Fourteen to Sixteen Years of Age, Year ending June 30, 1918.

1. Number of employment certificates issued,	99,629
(a) Boys,	60,908
(b) Girls,	38,721
Increase,	18,493
2. Number of different persons receiving employment certificates,	47,069
(a) Boys,	28,311
(b) Girls,	18,758
Increase,	5,097
3. Number of different persons receiving home permits,	1,544
(a) Boys,	303
(b) Girls,	1,241
Increase,	84
4. Number of holders of home permits included in item No. 2,	601
(a) Boys,	79
(b) Girls,	522
Increase,	40
5. Number of persons between fourteen and sixteen years of age holding employment certificates or home permits and enrolled in evening classes,	3,040
(a) Boys,	1,969
(b) Girls,	1,071
Increase,	887

II. STATISTICS OF STATE NORMAL SCHOOLS.

Teachers and students in normal schools and in model and practice schools for the school year ending June, 1918.

Rafter, Augustine L., As- sistant.	5,496	Boston, . . .	Boston.
Randall, Charles L., . .	2,500	97 Eighteenth Street, Lowell.	Dracut, North Reading, Tewks- bury, Tyngsborough.
Record, C. A., . . .	2,400	Bridgewater, . .	Abington, Bridgewater.
Reynolds, Fordyce T., . .	2,600	Gardner, . . .	Gardner.
Richards, Clinton J., . .	2,500	Shelburne Falls, .	Buckland, Colrain, Shelburne.
Richardson, Charles C., . .	2,050	West Brookfield, .	New Braintree, Sturbridge, West Brookfield.
Robbins, Linville W., . .	1,800	Stoughton, . .	Stoughton.
Robinson, Albert, . .	2,400	Peabody, . . .	Peabody.
Robinson, Ernest W., . .	3,500	Fitchburg, . . .	Fitchburg.
Rollins, Arthur S., ¹ . .	2,400	Lancaster, . . .	Lancaster.
Safford, Adelbert L., ² . .	3,000	Reading, . . .	Reading.
Sanborn, Henry C., . .	2,800	Andover, . . .	Andover.
Sanderson, William H., . .	2,000	Chester, . . .	Becket, Chester, Middlefield.
Scully, John F., . .	4,000	Brockton, . . .	Brockton.
Sherman, Frank J., . .	2,400	Danvers, . . .	Danvers.
Sheridan, Bernard M., . .	4,000	Lawrence, . . .	Lawrence.
Sims, William F., . .	2,700	Webster, . . .	Dudley, Webster.
Small, Alberto W., . .	2,100	Yarmouth, . . .	Brewster, Dennis, Yarmouth.
Smith, Abbie A., Assistant,	1,200	Everett, . . .	Everett.
Smith, Arthur W., . .	1,800	North Dana, . .	Dana, Greenwich, New Salem, Prescott.
Stearns, Mrs. Cora A., . .	1,800	Millers Falls, . .	Erving, Leverett, Shutesbury, Wendell.

¹ Also principal of high school.² Also principal of high school and director of agricultural department.

III. *List of Superintendents of Schools, with Towns and Cities in their Superintendencies — Concluded.*

SUPERINTENDENT OF SCHOOLS.	Salary.	Address.	Superintendency.
Stiles, Chester D., . . .	\$2,780	Westfield, . . .	Westfield.
Stuart, Josephine B., Assistant.	2,600	New Bedford, . . .	New Bedford.
Taft, Leonora E., . . .	2,200	413 Belmont Avenue, Springfield.	East Longmeadow, Hampden, Longmeadow, Wilbraham.
Tenney, Fred C., ¹ . . .	1,900	Pottersville, . . .	Somerset, Swansea.
Thompson, Frank V., . . .	10,000	Boston, . . .	Boston.
Thomson, Andrew S., . . .	1,800	South Deerfield, . . .	Conway, Deerfield, Sunderland, Whately.
Tirrell, Edwin S., ² . . .	1,600	Nantucket, . . .	Nantucket.
Toothaker, Oliver H., . . .	2,000	Fairhaven, . . .	Acushnet, Fairhaven, Mattapoisett.
Tower, Alfred O., . . .	1,800	Sheffield, . . .	Mount Washington, New Marlborough, Sheffield.
Van Ornum, Frederick B., . . .	2,200	Northborough, . . .	Berlin, Northborough, Shrewsbury, Southborough.
Van Sickle, James H., . . .	5,000	Springfield, . . .	Springfield.
Vining, Eugene C., ² . . .	2,150	Billerica, . . .	Billerica.
Waldron, Harry C., . . .	1,800	16 Vine Street, Leominster.	Princeton, Sterling, Westminster.
Walker, Charles W., . . .	1,800	Ashfield, . . .	Ashfield, Cummington, Goshen, Plainfield.
Ward, W. Scott, . . .	2,400	Athol, . . .	Athol.
Webber, Arthur B., . . .	2,620	Stoneham, . . .	Bedford, Stoneham.
West, Melvin J., . . .	1,800	Huntington, . . .	Blandford, Huntington, Montgomery, Russell.
Westcott, Ralph W., . . .	2,000	Mansfield, . . .	Mansfield.
Wheeler, Carlton E., ² . . .	2,400	North Easton, . . .	Easton.
Wheeler, Frederic A., . . .	2,000	Monson, . . .	Brimfield, Monson.
Wheeler, Ulysses G., . . .	5,250	Newtonville, . . .	Newton.
Whitman, Herbert L., . . .	2,200	Buzzards Bay, . . .	Bourne, Mashpee, Sandwich.
Whitman, Willard M., . . .	2,600	Swampscott, . . .	Swampscott.
Whitney, Fairfield, . . .	3,200	Everett, . . .	Everett.
Whittemore, Frederick E., . . .	1,900	South Hadley Falls, . . .	Granby, South Hadley.
Willard, Edgar L., . . .	2,200	Natick, . . .	Natick.
Williams, Harvey R., . . .	2,500	Wenham, . . .	Essex, Hamilton, Lynnfield, Topsfield, Wenham.
Williams, Loring G., . . .	2,200	Harwich, . . .	Chatham, Eastham, Harwich, Orleans.
Wyman, Elwood T., . . .	2,500	Whitman, . . .	Whitman.
Young, Walter S., Assistant.	3,200	Worcester, . . .	Worcester.

Total, 205: 190 superintendents; 15 assistant superintendents.

¹ Deceased.

² Also principal of high school.

IV. STATISTICS OF STATE-AIDED SUPERINTENDENCY UNIONS.

Index of Towns.

[NOTE. — The number indicates the superintendency union in which the town is found in the table that follows.]

34 Acton.	17 Dennis.	35 Holden.
29 Acushnet.	56 Dighton.	18 Holland.
55 Alford.	42 Douglas.	28 Holliston.
38 Amherst.	32 Dover.	22 Hopedale.
64 Ashburnham.	10 Dracut.	3 Hopkinton.
31 Ashby.	61 Dudley.	2 Hubbardston.
36 Ashfield.	65 Dunstable.	40 Huntington.
3 Ashland.	1 Duxbury.	46 Kingston.
49 Auburn.	16 East Bridgewater.	51 Lakeville.
41 Avon.	23 Eastham.	47 Lanesborough.
66 Ayer.	4 Easthampton.	44 Lee.
5 Barre.	19 East Longmeadow.	57 Leicester.
7 Becket.	26 Edgartown.	43 Leverett.
73 Bedford.	55 Egremont.	25 Leyden.
62 Belchertown.	62 Enfield.	34 Littleton.
22 Bellingham.	43 Erving.	19 Longmeadow.
37 Belmont.	50 Essex.	31 Lunenburg.
56 Berkley.	29 Fairhaven.	50 Lynnfield.
6 Berlin.	71 Florida.	1 Marshfield.
25 Bernardston.	69 Foxborough.	15 Mashpee.
72 Blackstone.	70 Franklin.	29 Mattapoisett.
40 Blandford.	68 Freetown.	58 Maynard.
65 Bolton.	26 Gay Head.	52 Medfield.
15 Bourne.	27 Georgetown.	28 Medway.
58 Boxborough.	25 Gill.	22 Mendon.
74 Boxford.	36 Goshen.	63 Merrimac.
66 Boylston.	68 Gosnold.	7 Middlefield.
17 Brewster.	12 Grafton.	74 Middleton.
8 Brimfield.	24 Granby.	13 Millbury.
11 Brookfield.	60 Granville.	52 Millis.
14 Buckland.	48 Greenwich.	72 Millville.
37 Burlington.	27 Groveland.	71 Monroe.
34 Carlisle.	39 Hadley.	8 Monson.
51 Carver.	46 Halifax.	44 Monterey.
30 Charlemont.	50 Hamilton.	40 Montgomery.
57 Charlton.	19 Hampden.	53 Mount Washington.
23 Chatham.	47 Hancock.	47 New Ashford.
47 Cheshire.	20 Hanover.	33 New Braintree.
7 Chester.	20 Hanson.	63 Newbury.
54 Chesterfield.	5 Hardwick.	53 New Marlborough.
26 Chilmark.	65 Harvard.	48 New Salem.
71 Clarksburg.	23 Harwich.	52 Norfolk.
14 Colrain.	39 Hatfield.	6 Northborough.
59 Conway.	30 Hawley.	11 North Brookfield.
36 Cummington.	30 Heath.	25 Northfield.
48 Dana.	45 Hinsdale.	10 North Reading.
59 Deerfield.	41 Holbrook.	69 Norton.

NOTE. — There are 235 towns in unions, — 216 State-aided, 19 not State-aided.

Of the foregoing unions, those numbered 22, 26, 38 and 51 were authorized by special acts of the Legislature.

V. DATA REGARDING CERTIFICATION OF SUPERINTENDENTS OF SCHOOLS.

The Board of Education, as required by chapter 215 of the Acts of 1904, determines by examination or otherwise the qualifications of candidates for the position of superintendent of schools in a superintendency union.

In accordance with the above provision of law, the Board now issues preliminary and permanent certificates of eligibility to appointment to a position as superintendent of schools in a superintendency union. Full information regarding such certification is given in Circular of Information No. 6, 1915.

YEAR.	Number certificated.	YEAR.	Number certificated.
1904,	7	1912,	21
1905,	14	1913,	15
1906,	23	1914,	14
1907,	15	1915,	9
1908,	10	1916,	11
1909,	21	1917,	18
1910,	19	1918,	19
1911,	7		

The classes of certificates held are as follows: —

Permanent certificate,	2
Preliminary certificate,	77
Term certificate,	145

VIII. TOWNS OF LESS THAN 500 FAMILIES AND STATE AID FOR HIGH SCHOOL EDUCATION THEREIN, SCHOOL YEAR ENDING JUNE 30, 1918.

[*Excess* in columns 4 and 6 in the following table denotes that the ratio of the valuation to the average membership of the schools was in excess of the corresponding ratio for the Commonwealth, and that consequently the town did not receive aid for maintaining a high school or for tuition in high schools in other towns or cities.

† in column 7 denotes that the town expended from local taxation for the support of schools less than \$4 per \$1,000 valuation, and that consequently the town did not receive reimbursement for transportation.

* in column 6 denotes that the valuation exceeded \$1,000,000, and that consequently the town received reimbursement for only one-half of the tuition expenditure.

* in column 7 denotes that the town expended from local taxation for the support of schools between \$4 and \$5 per \$1,000 valuation, and that consequently the town received reimbursement for only one-half of the transportation expenditure.

Acad. denotes that high school education was furnished by a high school not under the order and superintendence of the school committee.]

IX. COUNTY TRAINING SCHOOLS.

The following table gives a list of the county training schools in the State for the commitment of habitual truants, absentees and school offenders.

COUNTY TRAINING SCHOOL.	Location.	Superintendent.
Essex,	Lawrence,	W. Grant Fancher.
Hampden,	Springfield,	Charles E. Butler.
Middlesex, ¹	North Chelmsford,	Rufus E. Corlew.
Norfolk, Bristol and Plymouth Union,	Walpole,	James H. Craig.
Worcester,	Oakdale,	Alton W. Peirce.

¹ Under the law commitments from Chelsea, Revere and Winthrop in Suffolk County must be to the training school for the county of Middlesex.

The counties of Barnstable, Berkshire, Dukes, Franklin, Hampshire and Nantucket are exempted by law from maintaining training schools of their own, but the county commissioners of each of these counties are required to assign an established training school as a place of commitment for habitual truants, absentees and school offenders. The places designated by the several commissioners are as follows:—

COUNTY.	Location of assigned training school.	COUNTY.	Location of assigned training school.
Barnstable,	Walpole.	Franklin,	North Chelmsford.
Berkshire,	Springfield.	Hampshire,	North Chelmsford.
Dukes,	Walpole.	Nantucket,	- -

Table showing the number of pupils attending, admitted and discharged.

COUNTY TRAINING SCHOOL.	Number of pupils enrolled July 1, 1917.	Number of pupils enrolled July 1, 1918.	Number of pupils admitted during the year.	Number of pupils discharged during the year.
Essex,	137	138	46	45
Hampden,	38	68	49	19
Middlesex,	101	114	69	56
Norfolk, Bristol, Plymouth Union,	55	59	36	32
Worcester,	70	67	26	29

The following statement shows the condition of the Massachusetts School Fund: —

Amount of the fund Jan. 1, 1918,	\$5,000,000 00
Amount of fund Dec. 31, 1918,	5,000,000 00
Income for 1918,	210,556 21
Paid to towns in the distribution of March 10, 1919,	210,556 21

The following table shows the amount of the principal of the Massachusetts School Fund and the annual income from 1905 to 1918: —

YEAR.	Principal.	Income.
1905,	\$4,880,110 66	\$219,379 32
1906,	4,980,110 66	224,468 31
1907,	5,000,000 00	228,621 22
1908,	5,000,000 00	229,439 73
1909,	5,000,000 00	231,173 87
1910,	5,000,000 00	238,748 72
1911,	5,000,000 00	227,664 36
1912,	5,000,000 00	228,558 32
1913,	5,000,000 00	228,758 79
1914,	5,000,000 00	204,879 26
1915,	5,000,000 00	202,848 94
1916,	5,000,000 00	203,365 72
1917,	5,000,000 00	206,411 24
1918,	5,000,000 00	210,556 21

XII. TEACHERS' REGISTRATION BUREAU.

The Teachers' Registration Bureau has been consulted during the year by a larger number of school officials. Over 1,300 vacancies have been reported to the Bureau, and 447 of those vacancies, with an aggregate salary of \$320,000, have been filled by it. Since the middle of the summer there have been many vacancies for which the Bureau has had no candidates to suggest. It has been especially difficult to find candidates for vacancies in the high schools, the upper-grades and the ungraded rural schools.

During the year 765 teachers enrolled with the Bureau, making a total paid enrollment of 4,177 on Nov. 30, 1918.

Teachers registered.

	Nov. 30, 1913.	Nov. 30, 1914.	Nov. 30, 1915.	Nov. 30, 1916.	Nov. 30, 1917.	Nov. 30, 1918.

DIVISION 2. — STATE-AIDED VOCATIONAL EDUCATION.

The following list and tables are included in this division:—

1. Roster of State-aided Vocational Schools.
2. Financial Statement.
3. Summarized Financial Statement.
4. Prizes won in 1917 by (Agricultural) Pupils.
5. Earnings of Vocational Agricultural Pupils.
6. Vital Statistics.

TABLE NO. 1. — *Roster of State-aided Vocational Schools.*

1. SCHOOLS ESTABLISHED DURING SCHOOL YEAR SEPT. 1, 1917, TO AUG. 31, 1918.

NAME OF SCHOOL.	Date of opening.
Somerville Evening Vocational School,	Oct., 1917
Brockton Evening Industrial School,	Dec., 1917
Framingham Evening Industrial School,	Jan., 1918
Attleboro Vocational Agricultural Department,	May, 1918
Webster Vocational Agricultural Department,	May, 1918
Canton Vocational Agricultural Department,	May, 1918
Dedham Vocational Agricultural Department,	July, 1918
Gloucester Vocational Agricultural Department,	July, 1918
Stoughton Vocational Agricultural Department,	July, 1918
Mansfield Vocational Agricultural Department,	July, 1918
Lunenburg Vocational Agricultural Department,	July, 1918
Framingham Vocational Agricultural Department,	Aug., 1918
Ayer Vocational Agricultural Department,	Aug., 1918
Haverhill Vocational Agricultural Department,	Aug., 1918
Independent Industrial Shoemaking School of the City of Lynn,	Aug., 1918

2. SCHOOLS ESTABLISHED SINCE SEPT. 1, 1918.

Fall River Vocational Agricultural Department,	Sept., 1918
Taunton Evening Practical Arts School,	Sept., 1918
Boston Vocational Agricultural Department,	Nov., 1918
North Adams Evening Practical Arts School,	Nov., 1918
Haverhill Evening Practical Arts School,	Nov., 1918
Stoneham Evening Practical Arts School,	Dec., 1918

3. ONE HUNDRED AND SEVEN (ALL) SCHOOLS IN OPERATION DURING THE YEAR (OR NOW) IN 54 CITIES AND TOWNS, LISTED CHRONOLOGICALLY BY TYPES OF SCHOOLS.

Group I. Fourteen day industrial schools (boys).

NAME OF SCHOOL.	Es- tablished.	Director.
New Bedford Industrial School,	Nov., 1907	W. R. Mackintosh.
Smith's Agricultural School and Northampton School of Industries.	Oct., 1908	Herbert N. Loomis.
Newton Vocational School,	Feb., 1909	I. O. Palmer (Acting).
Beverly Industrial School,	Aug., 1909	Edgar A. Winters.
Worcester Boys' Trade School,	Feb., 1910	Albert J. Jameson.
Somerville Vocational School for Boys,	Sept., 1910	Harry L. Jones.
Lowell Vocational School,	Sept., 1911	Thomas F. Fisher.
Springfield Vocational School,	Sept., 1911	George A. Burr ridge (Acting).
Westfield Trade School,	Sept., 1911	Chester C. Derby.
Boston Trade School,	Feb., 1912	Wm. C. Crawford.
Quincy Industrial School,	Sept., 1912	E. P. Barrows.
Holyoke Vocational School,	Sept., 1914	M. S. Herbert.
Diman Industrial School (Fall River),	May, 1916	F. H. Rundall.
Independent Industrial Shoemaking School of the City of Lynn.	Aug., 1918	M. J. Tracey.

Group II. Three day industrial schools (girls).

Boston Trade School for Girls,	Sept., 1909	Florence E. Leadbetter.
Worcester Girls' Trade School,	Sept., 1911	Helen R. Hildreth.
Cambridge Girls' Trade School,	Feb., 1913	Maude A. Deehan.

Group III. Twenty evening industrial schools (men).

Cambridge Evening Industrial School,	Oct., 1907	Charles M. Herlihy.
New Bedford Evening Industrial School, ¹	Nov., 1907	W. R. Mackintosh.
Lawrence Evening Industrial School, ¹	Mar., 1908	Timothy J. Doyle.
Boston Trade School, Evening Classes,	Oct., 1908	Wm. C. Crawford.
Chicopee Evening Industrial School, ¹	Oct., 1908	John C. Gray.
Newton Evening Vocational School, ¹	Feb., 1909	I. O. Palmer (Acting).
Worcester Boys' Evening Trade School, ¹	Feb., 1910	Albert J. Jameson.
North Attleborough Evening Industrial School,	Oct., 1910	G. W. Morris.
Lowell Evening Vocational School, ¹	Sept., 1911	Thomas F. Fisher.
Westfield Evening Trade School,	Sept., 1911	Chester C. Derby.
Everett Evening Industrial School, ¹	Oct., 1911	J. Henry Clagg.

¹ Included war training classes for conscripted men.

3. ONE HUNDRED AND SEVEN (ALL) SCHOOLS IN OPERATION DURING THE YEAR (OR NOW) IN 54 CITIES AND TOWNS, LISTED CHRONOLOGICALLY BY TYPES OF SCHOOLS — *Continued.*

Group III. Twenty evening industrial schools (men) — Concluded.

NAME OF SCHOOL.	Es- tablished.	Director.
Holyoke Evening Vocational School, ¹	Oct., 1911	M. S. Herbert.
Quincy Evening Industrial School,	Oct., 1911	Albert L. Barbour.
Fall River Evening Industrial School, ¹	Jan., 1914	Hector L. Belisle.
Attleboro Evening Industrial School,	Oct., 1914	Lewis A. Fales.
Waltham Evening Industrial School,	Dec., 1915	Wm. D. Parkinson.
Springfield Evening Vocational School, ¹	Feb., 1916	Geo. A. Burrige (Acting).
Beverly Evening Industrial School, ¹	Nov., 1916	Edgar A. Winters.
Somerville Evening Vocational School,	Oct., 1917	Harry L. Jones.
Brockton Evening Industrial School, ²	Dec., 1917	John F. Scully.
Framingham Evening Industrial School, ¹	Jan., 1918	Ernest W. Fellows.
Taunton Evening Industrial School,	Nov., 1918	Henry W. Harrub.

Group IV. One evening industrial school (women).

Boston Trade School for Girls,	Sept., 1909	Florence E. Leadbetter.
--	-------------	-------------------------

Group V. Nine homemaking schools (day).

New Bedford Household Arts School,	Nov., 1907	W. R. Mackintosh.
Smith's Household Arts School,	Oct., 1908	Herbert N. Loomis.
Newton Vocational School,	Feb., 1909	I. O. Palmer (Acting).
Lowell Vocational School,	Sept., 1911	Thomas F. Fisher.
Somerville Girls' Vocational School,	Oct., 1911	Mary H. Brown.
Boston Continuation School of Household Practice,	Jan., 1913	Owen D. Evans.
Essex County School of Homemaking,	Sept., 1914	Fred A. Smith.
Worcester Household Arts School,	Sept., 1915	Helen R. Hildreth.
Quincy School of Homemaking,	June, 1916	Elizabeth M. Douglass.

Group VI. Twenty-three practical arts schools (evening).

New Bedford Evening Practical Arts School,	Nov., 1907	W. R. Mackintosh.
Lawrence Evening Practical Arts School, ³	Mar., 1908	Timothy J. Doyle.
Newton Evening Practical Arts School, ³	Feb., 1909	I. O. Palmer (Acting).
North Attleborough Evening Practical Arts School,	Oct., 1910	G. W. Morris.
Lowell Evening Practical Arts School,	Sept., 1911	Thomas F. Fisher.

¹ Included war training classes for conscripted men.

² Special war training class for conscripted men.

³ Included war emergency work in canning.

3. ONE HUNDRED AND SEVEN (ALL) SCHOOLS IN OPERATION DURING THE YEAR (OR NOW) IN 54 CITIES AND TOWNS, LISTED CHRONOLOGICALLY BY TYPES OF SCHOOLS — *Continued*.

Group VI. Twenty-three practical arts schools (evening) — Concluded.

NAME OF SCHOOL.	Es- tablished.	Director.
Worcester Evening Practical Arts School, ¹ . . .	Sept., 1911	Helen R. Hildreth.
Everett Evening Practical Arts School, . . .	Oct., 1911	Fairfield Whitney.
Holyoke Evening Practical Arts School, ¹ . . .	Oct., 1911	M. S. Herbert.
Quincy Evening Practical Arts School, . . .	Oct., 1911	Albert L. Barbour.
Somerville Evening Practical Arts School, . . .	Oct., 1911	Mary H. Brown.
Boston Evening Practical Arts School, . . .	Oct., 1912	M. J. Downey.
Cambridge Evening Practical Arts School, . . .	Oct., 1912	Charles M. Herlihy.
Methuen Evening Practical Arts School, . . .	Oct., 1912	Edwin L. Haynes.
Wakefield Evening Practical Arts School, . . .	Oct., 1912	Willard B. Atwell.
Fall River Evening Practical Arts School, ² . . .	Jan., 1914	Hector L. Belisle.
Walpole Evening Practical Arts School, . . .	Jan., 1914	Harrie J. Phipps.
Gloucester Evening Practical Arts School, . . .	Jan., 1916	T. M. Haines.
Leominster Evening Practical Arts School, ¹ . . .	Feb., 1916	Wm. H. Perry.
Weymouth Evening Practical Arts School, ¹ . . .	Mar., 1916	Parker T. Pearson.
Plymouth Evening Practical Arts School, ¹ . . .	July, 1917	Charles A. Harris.
Concord Evening Practical Arts School, ² . . .	July, 1917	Wells A. Hall.
North Adams Evening Practical Arts School, ² . . .	July, 1918	Burr J. Merriam.
Essex County Evening Practical Arts School, ² . . .	July, 1918	Fred A. Smith.
Taunton Evening Practical Arts School, . . .	Sept., 1918	Henry W. Harrub.

Group VII. One continuation school (compulsory and voluntary).

Boston Continuation School,	Sept., 1914	Owen D. Evans.
---------------------------------------	-------------	----------------

Group VIII. Six agricultural schools.

Smith's Agricultural School and Northampton School of Industries.	Oct., 1908	Herbert N. Loomis.
Bristol County Agricultural School,	Sept., 1913	George H. Gilbert.
Concord Agricultural School, ³	Sept., 1913	Wells A. Hall.
Essex County Agricultural School,	Oct., 1913	Fred A. Smith.
Newton Agricultural School, ³	Sept., 1916	U. G. Wheeler.
Norfolk County Agricultural School,	Oct., 1916	Fred W. Kingman.
Weymouth Branch,	Oct., 1916	Chas. W. Kemp, in- structor.

¹ Included war emergency work in canning.

² Special war emergency work in canning.

³ Included war emergency work in agriculture.

3. ONE HUNDRED AND SEVEN (ALL) SCHOOLS IN OPERATION DURING THE YEAR (OR NOW) IN 54 CITIES AND TOWNS, LISTED CHRONOLOGICALLY BY TYPES OF SCHOOLS — *Continued.*

Group IX. Thirty-one agricultural departments.

NAME OF SCHOOL.	Es- tablished.	Director.
Hadley Vocational Agricultural Department, . .	Jan., 1912	Edw. J. Burke, instructor.
Harwich Vocational Agricultural Department, . .	Apr., 1912	J. C. Hawkes, instructor.
Easton Vocational Agricultural Department, . .	Aug., 1912	Theo. W. Glover, instructor.
Ashfield Vocational Agricultural Department, . .	Aug., 1913	H. S. Bridges, instructor.
Brimfield Vocational Agricultural Department, . .	Sept., 1913	John G. Glavin, instructor.
Marlborough Vocational Agricultural Department, . .	Nov., 1913	Ashley Le Duc, instructor.
Reading Vocational Agricultural Department, . .	May, 1915	Rudolph Sussman, instructor.
Leominster Vocational Agricultural Department, ¹ . .	Sept., 1915	L. H. Burns, instructor.
Orange Vocational Agricultural Department, ¹ . .	Sept., 1916	R. A. Lundgren, instructor.
Worcester Vocational Agricultural Department, ¹ . .	May, 1917	H. R. Kinney, instructor; F. A. Andrews, Assistant; Thos. J. Higgins, Assistant.
Plymouth Vocational Agricultural Department, . .	July, 1917	Wm. I. Mayo, Jr., instructor.
Boston Vocational Agricultural Department, . .	Nov., 1918	Thos. P. Dooley, instructor.

The following had war emergency work in agriculture only.

Holyoke Vocational Agricultural Department, . .	Apr., 1917	Geo. D. Hearn, instructor.
Norwood Vocational Agricultural Department, . .	Apr., 1917	Geo. M. Joy, instructor.
Wakefield Vocational Agricultural Department, . .	Apr., 1917	Donald White.
Falmouth Vocational Agricultural Department, . .	May, 1917	Wallace Hatch, instructor.
Saugus Vocational Agricultural Department, . .	May, 1917	Ellery E. Metcalf.
North Attleborough Vocational Agricultural Department.	May, 1917	Raymond M. Upton, instructor.
North Adams Vocational Agricultural Department, . .	May, 1917	Charles H. Peters.
Attleboro Vocational Agricultural Department, . .	May, 1918	Arthur Fraters.
Canton Vocational Agricultural Department, . .	May, 1918	Samuel Knowles, instructor.
Webster Vocational Agricultural Department, . .	May, 1918	Ralph L. Easterbrook, instructor.
Dedham Vocational Agricultural Department, . .	July, 1918	Emerson F. Haslam, instructor.
Gloucester Vocational Agricultural Department, . .	July, 1918	Philip V. Tarr, instructor.
Stoughton Vocational Agricultural Department, . .	July, 1918	E. H. Gilbert, instructor.
Mansfield Vocational Agricultural Department, . .	July, 1918	Winthrop Howard, instructor.
Lunenburg Vocational Agricultural Department, . .	July, 1918	Geo. Hastings, instructor.

¹ Included war emergency work in agriculture.

3. ONE HUNDRED AND SEVEN (ALL) SCHOOLS IN OPERATION DURING THE YEAR (OR NOW) IN 54 CITIES AND TOWNS, LISTED CHRONOLOGICALLY BY TYPES OF SCHOOLS — *Concluded.*

The following had war emergency work in agriculture only — Concluded.

NAME OF SCHOOL.	Es- tablished.	Director.
Framingham Vocational Agricultural Department, .	Aug., 1918	Chas. C. Clement, in- structor.
Haverhill Vocational Agricultural Department, . .	Aug., 1918	Clinton F. Goodwin, in- structor.
Ayer Vocational Agricultural Department, . . .	Aug., 1918	Ernest M. Gleason, in- structor.
Fall River Agricultural Department,	Sept., 1918	Irving B. Stafford, in- structor. George Howard, super- visor.

4. FOURTEEN SCHOOLS WHICH WERE DISCONTINUED PREVIOUS TO SEPT. 1, 1918.

NAME OF SCHOOL.	Opened.	Discontinued.
Pittsfield Evening Industrial School,	1908	1910
Lawrence Day Industrial School,	1909	1913
Northborough Vocational Agricultural Department, . .	1912	1913

² Includes agricultural work conducted as a war emergency measure. This department started at the beginning of the school year, but on account of war conditions did not continue, consequently the statistics are incomplete.

³ Includes agricultural work conducted as a war emergency measure.

DIVISION 3. — UNIVERSITY EXTENSION.

The following summary and tables are included in this division: —

- I. Summary of Total Enrollment in Correspondence Courses, in Classes, and in Study Groups.
- II. Table showing Number of Students who have received Instruction by Correspondence in Different Subjects during the Last Fiscal Year, Dec. 1, 1917, to Nov. 30, 1918.
- III. Table showing Enrollment by Subjects in Classes, and Location thereof.
- IV. Table showing Number of Students who completed Courses, previous to Nov. 30, 1918.
- V. Table showing Number of Re-enrollments in Courses.
- VI. Table showing Average Age of Students.
- VII. Table showing Number of Students enrolled in North Adams Normal School Correspondence Courses.
- VIII. Table showing Enrollment in Courses offered by the Committee on University Extension in the Connecticut Valley in Co-operation with the Department of University Extension.
- IX. Figure showing Distribution of Costs Dec. 1, 1917, to Nov. 30, 1918.

I. *Summary of total enrollment of students throughout the Commonwealth according to type of instruction, — correspondence, class, and group.*

[Period covered, Jan. 19, 1916, when first student was enrolled, to Nov. 30, 1918.]

	Men.	Women.	Totals.
Total correspondence enrollment,	4,063	1,502	5,565
Total class enrollment,	4,247	4,130	8,377
Total group enrollment,	89	33	122
Total enrollment,	8,399	5,665	14,064

II. *Number of students who have received instruction by correspondence in groups of subjects during the last fiscal year.*

[Dec. 1, 1917, to Nov. 30, 1918.]

Elementary English,	574
Elementary English,	368
Elementary English, continued,	17
English for new Americans,	36
English for business,	43
Plain English,	110

II. *Number of students who have received instruction by correspondence in groups of subjects during the last fiscal year — Continued.*

Advanced English,	162
English composition A,	121
English composition B,	13
English composition AA,	28
Commercial correspondence,	40
Romance languages,	222

TABULATION AND ANALYSIS
OF THE
SCHOOL RETURNS

OF THE
354 CITIES AND TOWNS
OF THE COMMONWEALTH

FOR THE
SCHOOL YEAR ENDING JUNE 30, 1918

STATISTICS FOR STATE-AIDED VOCATIONAL EDUCATION ARE NOT INCLUDED

VALUATION PER PUPIL AND SCHOOL TAX PER \$1,000 VALUATION.

As shown by the charts on pages iv and v, the "valuation per pupil" in the 354 cities and towns of the Commonwealth varied from \$107,380 for Gosnold to \$1,854 for Gay Head; and the "school tax per \$1,000 valuation" varied from \$0.35 for Peru to \$11.42 for Abington.

The "valuation per pupil" is the best available measure of the financial ability of a city or town to maintain good schools.

The "school tax per \$1,000 valuation" is the best available measure of the effort which a city or town makes to maintain good schools.

While these numbers are the best measures available, it must be admitted that they often fail to take into consideration certain important modifying factors, such as the following:—

(1) Property in some cities and towns is assessed at considerably less than full value, thereby making the valuation per pupil lower than the wealth per pupil. The tendency, however, is to raise assessments to full value.

(2) Sparsely settled towns must either incur heavy expenses for transportation or maintain many small schools. This increases the cost of education. Too frequently such towns, to keep down expenses, pay teachers' salaries far below standards recognized as essential for a living wage.

The "valuation" used in these charts, and in the tables that follow, is the valuation as of April 1, 1917, including supplementary assessments made between December 10 and 20 of that year.

The "valuation per pupil" is obtained by dividing the valuation by the number of pupils in the *average membership of the public day schools* of that city or town for the school year ending June 30, 1918.

By "school tax" is meant the money expended from the proceeds of local taxation for the *support* of public schools for the city or town fiscal year next preceding June 30, 1918. This

fiscal year coincided with the calendar year of 1917 in all towns and in nearly all cities. The school tax does not include money expended for *outlay*, that is, for new grounds, buildings and alterations, and new equipment. All expenditures for *State-aided vocational education* are excluded from the school returns and, consequently, from all the charts and tables based thereon.

For the "valuation per pupil" and the "school tax per \$1,000 valuation" of any particular city or town, see the graduated valuation table on pages vi to ix.

SCHOOL TAX PER \$ 1,000 VALUATION

CHART SHOWING THE NUMBER OF CITIES AND TOWNS WHOSE SCHOOL TAX PER \$1,000 VALUATION EXCEEDED A GIVEN AMOUNT AND THE NUMBER WHOSE SCHOOL TAX PER \$1,000 VALUATION WAS BETWEEN GIVEN AMOUNTS

SCHOOL TAX PER \$1,000 VALUATION VARIED FROM \$ 11.42 (ABINGTON) TO \$ 0.35 (PERU)

SCHOOL TAX PER \$ 1,000 VALUATION FOR THE STATE \$ 5.45

GRADUATED VALUATION TABLE.

The cities and towns within each of the following groups are arranged in descending order of their "Valuation per pupil in average membership," which is given in column 1.

The numbers in column 2, "School tax per \$1,000 valuation," must of necessity increase as the numbers in the first column decrease, if the cities and towns are to make equivalent provision from the proceeds of local taxation for the education of each pupil.

Column 3, "School tax per pupil in average membership," gives the amount that the city or town expended from the proceeds of local taxation for each pupil in the average membership of its public schools. It is derived by applying the "School tax per \$1,000 valuation," as given in column 2, to the "Valuation per pupil in average membership," as given in column 1.

Column 4, "State aid per pupil in average membership," gives the amount that the State contributed for each pupil.

By dividing the amount in column 4 by the amount in column 3 we find the ratio of State aid to local support. This varies from zero in the case of several cities and towns to a ratio of 21 to 1 for Peru.

The numbers given in columns 1, 2, 3, 4 of this table for any city or town are identical with the numbers given in the main table beginning on page xx for that city or town in columns 54, 56, 43, 46, respectively.

29%	861	ONE-ROOM BUILDINGS
13%	391	TWO-ROOM
58%	1,749	BUILDINGS WITH THREE OR MORE ROOMS

EXPLANATION OF MAIN TABLE.

The table on pages xx to cxcix gives the principal items in the annual school returns from the 354 cities and towns of the Commonwealth.

To find any particular city or town use the index on pages xviii and xix.

In the table the cities and towns are divided into four groups, and arranged within each group in the order of population, as follows:—

	Index Numbers
Group I. Cities	1-38
Group II. Towns of 5,000 population or over	39-113
Group III. Towns of less than 5,000 population and maintaining public high schools	114-229
Group IV. Towns of less than 5,000 population and not maintaining public high schools	230-354

The columns containing any particular item have the same number throughout the table. They contain the following data:—

Column
Number

1. *Population*, State census of 1915.
2. *Valuation*, as of April 1, 1917. These valuations include supplementary assessments made between the 10th and 20th of December, 1917, on property as of April 1, 1917.
- 3-7. *Teaching staff* in public day schools.
- 8-16. *Persons 5 to 16 years of age*, April 1, 1918. Classified in the three age groups 5 to 7, 7 to 14, and 14 to 16. In each group there are given the number in the registration of minors or school census, in public schools, and in private schools.
- 17, 18. *Illiterate minors, 16 to 21 years of age*.
- 19-23. *Pupils* in public day schools.
- 24-38. *Itemized expenditures for support* of all public schools, year ending June 30, 1918.
- 39-41. *Expenditures for outlay*, including new grounds, buildings and alterations, and new equipment, year ending June 30, 1918.
- 42-51. *Expenditures for school support classified as to sources* from which the funds were received. These expenditures are for the city or town fiscal year next preceding June 30, 1918, which in all towns and nearly all cities ended Dec. 31, 1917. These columns contain also the rank of each city and town on the basis of the per capita expenditures from funds received from local taxation, from the State and from all sources. These expenditures are referred to as the *school tax* in the chart on page v and in the table on pages vi to ix.

Column
Number

- 52, 53. *Income from Massachusetts School Fund.*
- 54, 55. *Valuation per pupil*, based on the average membership of the public day schools for the year ending June 30, 1918, and the rank of the city or town based thereon.
- 56, 57. *Expenditure per \$1,000 valuation* for school support from funds raised by local taxation, fiscal year next preceding June 30, 1918, and the rank of the city or town based thereon. This item is sometimes called *School Tax per \$1,000 valuation*.
- 58, 59. *Rate of total tax per \$1,000 valuation* for 1917, and the rank of the city or town based thereon.
- 60-68. *Evening and vacation schools.*
- 69-71. *Number of year grades* in elementary schools, junior high schools, if any, and senior high schools.
- 72-84. *Day elementary schools.*
- 85-98. *Day high schools* in cities and towns in Groups I, II and III.
- 99-106. *Expenditures for high school education* in towns in Group IV, which are towns not maintaining public high schools.
- 107-121. *Employment statistics for minors 14 to 16 years of age.*
- 122-141. *Pupils in each grade.* Membership in public day schools, April 1, 1918, classified as to grade.
- 142-148. *Training of teaching staff.*
- 149-152. *School buildings* in use Jan. 1, 1918, classified as to number of rooms.
- 153-156. *Value of buildings.*

Pages cc and cci contain a table giving a comparison of certain State totals for 1917-18 with the corresponding data for 1907-08, and showing the percentage of increase and decrease for the period of ten years.

Statistics for State-aided vocational education are not included in the school returns, and, consequently, are not given in the tables in this abstract.

INDEX OF CITIES AND TOWNS.

The number preceding the name of the city or town indicates its place in the table that follows.

99 Abington.	259 Cheshire.	292 Granby.
244 Acton.	204 Chester.	294 Granville.
